
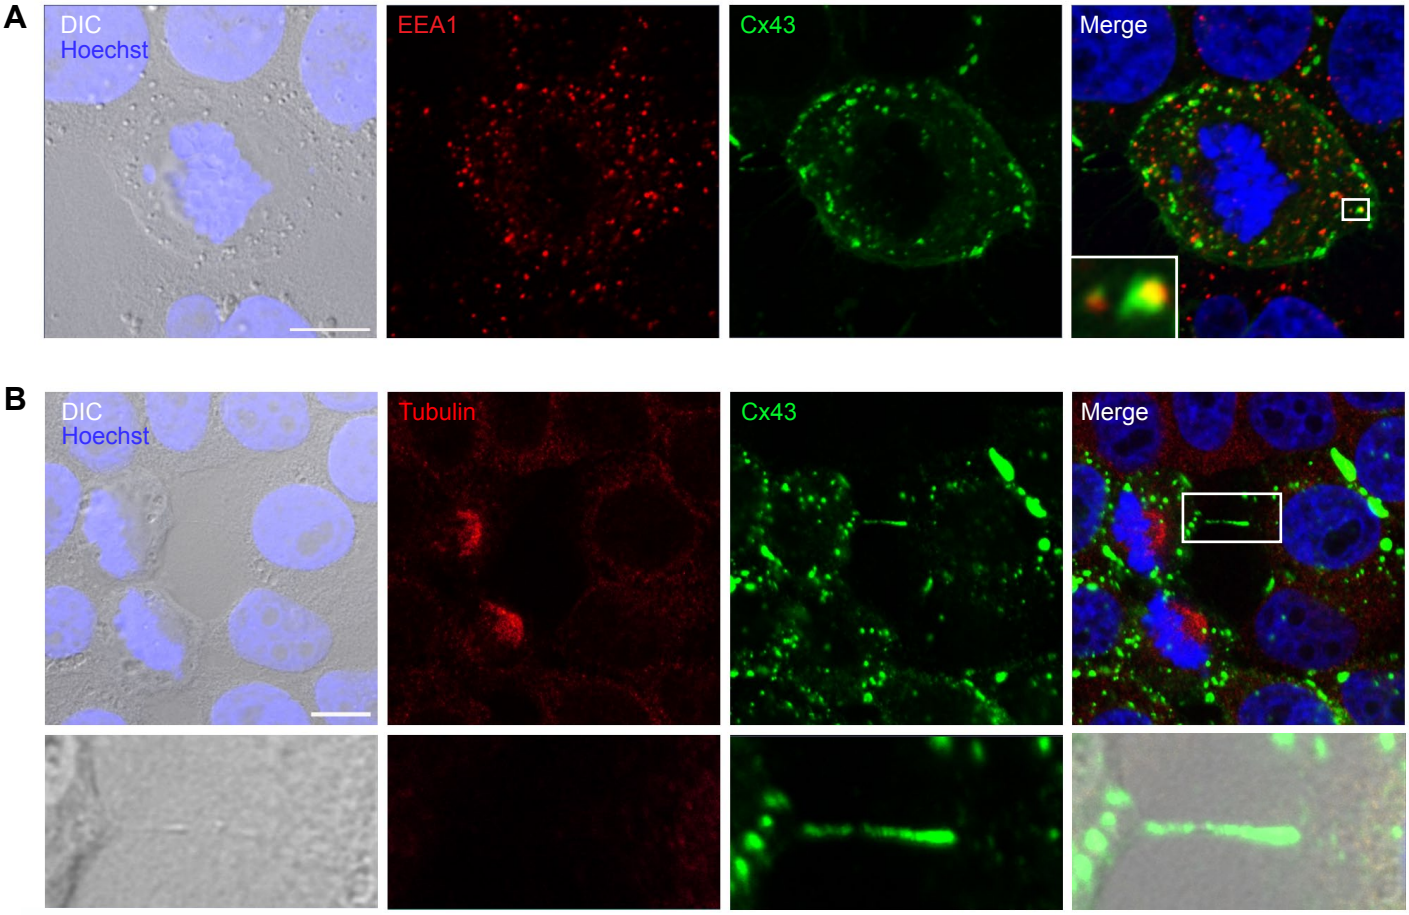

Figure S3. Localization of Cx43 in mitotic HeLa-Cx43 cells. (A) HeLa-Cx43 cells were fixed and stained against Cx43 (green) and EEA1 (red), and visualized using immunofluorescence confocal microscopy. Insert shows enlarged view of an intracellular vesicular structure displaying colocalization between Cx43 and EEA1, indicated by yellow colour. Scale bar, 10 µm. **(B)** HeLa-Cx43 cells were fixed and stained against tubulin (red) and Cx43 (green), and visualized using immunofluorescence confocal microscopy. Inset shows enlarged view of a representative intercellular membrane bridge. Scale bar, 10 µm.
