		Guedes et al., 2014	Ferreira Zandoná et al., 2012
Sample size at baseline		639 patients	565 patients
Dentition/Age		Primary/1-4 years-old	Permanent/5-13 years-old
Follow-up		2-year study	4-year-study
Mean follow-up		849.8 days (95.1)	-
Sample size re-examined		469 patients	338 patients
Follow-up rate		73.4%	59.8%
		Re-examined sample	
		31,496 surfaces*	41,031 surfaces**
Baseline status	Sound	29,336* (93.1%)	37,549 (91.5%)
	Inactive	324 (1.1%)	2,924 (7.1%)
	Active	1836 (5.8%)	558 (1.4%)
		Caries progression after 2 years	
Sound surfaces		1.9%	3%
Non-cavitated	Inactive	6.2%	11.5%
	Active	9.9%	11.5%#
Cavitated	Inactive	34.3%	25%
	Active	47.4%	46.5%

* data extracted from Guedes et al., 2015 (ICDAS scores 0-3), a complementary study.

** including only erupted surfaces at baseline, ICDAS scores 0-4

different rates were observed if only score 2 lesions were included.
