<sup>§</sup> Summed features are fatty acids that cannot be resolved reliably from another fatty acid using the chromatographic conditions chosen. The MIDI system groups these fatty acids together as one feature with a single percentage of the total. Summed feature 3 contains C<sub>16:1</sub> ω6c and/or C<sub>16:1</sub> ω7c; summed feature 9 contains iso-C<sub>17:1</sub> ω9c and/or C<sub>16:0</sub> 10-methyl.
