Asymmetric Synthesis of the Quinolizidine Alkaloid (-)-Epimyrtnine using

Intramolecular Mannich Cyclization and *N*-Sulfinyl δ -Amino β -Ketoesters

Supporting Information

General Procedures: Column chromatography was performed on silica gel, Merck grade 60 (230-400 mesh). TLC plates were visualized with UV, in an iodine chamber, or with phosphomolybdic acid, unless otherwise noted. ^1H NMR and ^{13}C NMR spectra were recorded at 500 and 125 MHz, respectively. THF was freshly distilled under argon from a purple solution of sodium and benzophenone. Unless stated otherwise, all the reagents were purchased from commercial sources and used without additional purification.
