3. Kinetic data	S6

General Information: Solvents, bases, acetylene, and aryl halides were purchased from Aldrich and used without purification. (AllylPdCl)₂ was purchased from Johnson & Matthey and P(*t*-Bu)₃ was purchased as a 10 wt% solution in hexanes from Digital Science and Strem Chemicals. P(*t*-Bu)₃HBF₄ was purchased from Strem Chemicals. All reactions were monitored by HPLC using XTerra column (XTerra RP₁₈ 5μm) 4.6 x 250 mm, eluent: CH₃CN / 20mM KH₂PO₄ buffer. Initial conditions of 40% CH₃CN with gradient to 80% CH₃CN over 25 min. Flow rate of 1 mL/min with UV detection at 220nm. All ends of reactions were determined by the complete consumption of aryl halide by HPLC. All products conformed to previously published ¹H NMR spectra referenced.

Representative Procedure – aryl bromide is a solid (Table 2, Entry 2; 4-Methylbenzoate phenyl acetylene):¹ Reaction time: 23 h. Methyl 4-bromobenzoate (0.46 g, 2.12 mmol) and (AllylPdCl)₂ (0.019 g, 0.053 mmol) was added to a dry Schlenk tube and sealed with a rubber septa. The vessel was degassed then backfilled with nitrogen in 3 repetitions followed by addition of acetonitrile (2.5 mL). Then P(*t*-Bu)₃ (0.64 mL of a 10 wt% in hexanes, 0.21 mmol), phenylacetylene (0.26 mL, 2.33 mmol), and piperidine (0.42 mL, 4.24 mmol) were added in that order via a syringe to the stirred reaction mixture. During the reaction, the precipitation of piperidine bromide salt was observed. After completion of reaction, as determined by complete conversion of aryl halide, EtOAc (10 mL) and water (5 mL) were added to the reaction mixture. The layers were separated and the aqueous layer was extracted with 2 x 10 mL of EtOAc. The organic layers were combined then washed with brine, dried with sodium sulfate, and concentrated. Purification by flash chromatography (95:5 / Hexanes:EtOAc) furnished the desired product (0.46 g, 92%) as a solid.

Representative Procedure - aryl bromide is a liquid (Table 2, Entry 10; 2,6-Dimethylphenyl phenyl acetylene):² Reaction time: < 18 h. (AllylPdCl)₂ (0.022 g, 0.061 mmol) was added to a dry Schlenk tube and sealed with a rubber septa. The vessel was degassed then backfilled with nitrogen in 3 repetitions followed by addition of acetonitrile (2.5 mL) and 2,6-bromoxylene (0.45 g, 2.42 mmol). Then P(*t*-Bu)₃ (0.73 mL of a 10 wt% in hexanes, 0.24 mmol) and phenylacetylene (0.29 mL, 2.66 mmol) were added in that order via a syringe to the stirred reaction mixture followed immediately by DABCO (0.54 g, 4.84 mmol) under a positive pressure of nitrogen. During the reaction the precipitation of DABCO bromide salt was observed. After completion of reaction, as determined by complete conversion of aryl halide, EtOAc (10 mL) and water (5 mL) were added to the reaction mixture. The layers were separated and the aqueous layer was extracted with 2 x 10 mL of EtOAc. The organic layers was combined then washed with brine, dried with sodium sulfate, and concentrated. Purification by flash chromatography (100 % Hexanes) furnished the desired product (0.44 g, 88%) as an oil.

Table 2, Entry 1: 4-phenyl cyclopropylmethanone ethynylferrocene. Reaction time: 16 h. Purification by flash chromatography (95:5 / hexanes:EtOAc to 85:15 / hexanes:EtOAc) furnished the desired product (0.43g, 86%) as a orange solid. ¹H NMR (400 MHz, C₆D₆) δ 0.64 (dq, 2H, *J* = 8.0, 3.6 Hz), 1.31 (dq, 2H, *J* = 4.4, 3.6 Hz), 2.14 (tt, 1H, *J* = 8.0, 4.4 Hz), 4.06 (t, 2H, *J* = 1.8 Hz), 4.18 (s, 5H), 4.60 (2H, t, *J* = 1.8 Hz), 7.58

(d, 2H, $J = 8.4$ Hz), 7.90 (d, 2H, $J = 8.4$ Hz). ^{13}C NMR (400 MHz, CDCl_3) δ 11.7, 17.1, 64.4, 69.1, 70.0, 71.5, 85.2, 92.2, 127.9, 128.5, 131.3, 136.4, 199.7; Anal Calcd for $\text{C}_{22}\text{H}_{18}\text{FeO}$: C, 74.60; H, 5.12; Fe, 15.77. Found: C, 73.96; H, 5.10; Fe, 16.40. m.p. 164 – 165 °C.

Table 2, Entry 3: 4-Acetylphenyl phenyl acetylene.³ Reaction time: 9 h. Purification by flash chromatography (95:5 / hexanes:EtOAc) furnished the desired product (0.48g, 96%) as a solid.

Table 2, Entry 4: 2-Methyl-4-acetylphenyl-3-butyn-2-ol.⁴ Reaction time: 48 h. Purification by flash chromatography (6:4 / hexanes:EtOAc) furnished the desired product (0.40g, 80%) as a oil.

Table 2, Entry 5: 1-Acetylphenyl-1-octyne.⁵ Reaction time: <15 h. Purification by flash chromatography (95:5 hexanes:EtOAc) furnished the desired product (0.39g, 78%) as a oil.

Table 2, Entry 6: Diphenyl acetylene.⁶ Reaction time: < 15 h. Purified by filtration over a short plug of silica and washing with ~ 600 mL of hexanes. The filtrate was concentrated to furnish the desired product (0.43g, 86%) as a solid.

Table 2, Entry 7: 1-Cyclohexene phenyl acetylene.⁷ Reaction time: < 20 h. Purified by filtration over a short plug of silica and washing with ~ 500 mL of hexanes. The filtrate was concentrated to furnish the desired product (0.48g, 96%) as a solid.

Table 2, Entry 8: 4-Methoxyphenyl phenyl acetylene.⁸ Reaction time: 11 h. Purification by flash chromatography (98:2 hexanes:EtOAc) furnished the desired product (0.41g, 82%) as a solid.

Table 2, Entry 9: 1-Cyclohexene-4-methoxyphenyl acetylene.⁹ Reaction time: < 20 h. Purification by flash chromatography (99:1 hexanes:EtOAc) furnished the desired product (0.46g, 92%) as a oil.

Table 2, Entry 11: 3-pyridine phenyl acetylene.¹⁰ Reaction time: 48 h. After completion of reaction, as determined by HPLC, EtOAc (10 mL) and water (5 mL) were added to the reaction mixture. The layers were separated and the aqueous layer was extracted with 10 mL of EtOAc. The combined organics were then extracted with 3 x 10 mL of 2N HCl and the organic discarded. The combined aqueous was pH adjusted to 7 and extracted with 3 x 10 mL of EtOAc. The combined organics layers were then dried with sodium sulfate and concentrated. Purification by flash chromatography (7:3 hexanes:EtOAc) furnished the desired product (0.42g, 84%) as a solid.

Table 2, Entry 12: 3-pyridine-N-oxide phenyl acetylene. Reaction time: 35 h. Purification by flash chromatography (9:1 /EtOAc:MeOH) furnished the desired product (0.47g, 94%) as a off-white solid. ^1H NMR (400 MHz, CDCl_3): δ 7.23-7.26 (m, 1H), 7.36-7.42 (m, 4H), 7.51-7.56 (d, 2H, $J = 6.4$ Hz), 8.15-8.18 (d, 2H, $J = 6.4$ Hz), 8.33 (s,

1H),; ¹³C NMR (400 MHz, CDCl₃): δ 83.0, 94.5, 121.4, 123.5, 125.6, 128.4, 128.5, 131.8, 138.6, 141.0.; Anal. Calcd. for C₁₃H₉NO: C, 79.98; H, 4.65; N, 7.17. Found: C, 78.11; H, 4.59; N, 6.94. m.p. 114 – 115 °C.

Table 2, Entry 13: 3-thiophene phenyl acetylene.¹¹ Reaction time: < 16 h. Purification by flash chromatography (100% hexanes) furnished the desired product (0.48g, 96%) as a solid.

Table 2, Entry 14: 4-Acetylphenyl phenyl acetylene.³ Reaction time: 24 h. Phenylacetylene was charged via a syringe pump at a rate of 0.03 mL/h. After completion of reaction, as determined by HPLC, Ether (10 mL) and water (5 mL) were added to the reaction mixture. The layers were separated and the aqueous layer was extracted with 2 x 10 mL of Ether. The organic layers were combined then washed with brine, dried with sodium sulfate, and concentrated. Purification by flash chromatography (95:5 / hexanes:EtOAc) furnished the desired product (0.25g, 50%) as a solid.

Kinetic Data: All reactions were monitored by HPLC using XTerra column (XTerra RP₁₈ 5 μ m) 4.6 x 250 mm, eluent: CH₃CN / 20mM KH₂PO₄ buffer. Initial conditions of 40% CH₃CN with gradient to 80% CH₃CN over 10 min. Flow rate of 2.2 mL/min with UV detection at 220nm. All concentrations were determined by comparison of the peak area of substrate to the internal standard of 1,4-di-*t*-butylbenzene.

Typical Procedure: 4-bromoacetophenone (0.452 g, 2.27 mmol), (AllylPdCl)₂ (.0166 g, 0.045 mmol), and 1,4-di-*t*-butylbenzene (0.19 g) were charged to a dry Schlenk tube and sealed with a rubber septa. The vessel was degassed then backfilled with nitrogen in 3 repetitions followed by addition of acetonitrile (5.5 mL). Then P(*t*-Bu)₃ (0.55 mL of a 10 wt% in hexanes, 0.18 mmol) was charged followed by DABCO (0.76 g, 6.81 mmol) under a positive pressure of nitrogen. The reaction is allowed to stir for 1 h at room temperature then phenylacetylene (0.24 g, 2.38 mmol) was charged and the reaction monitored by HPLC.
