

## Supporting Information

**Scheme S1** : Oxime ether synthesis

*Synthesis of oxime ethers 2a-2k :*

General method: BBHA (50-100 µmol, 1-2 eq) was added to a solution of the carbonyl compound (**1a-1k**, 50 µmol) in PIPES buffer (0.1 M, pH 6.5, 1 mL). The mixture was stirred at 6-8 °C for one hour.

Work-up: SPE cartridge was washed with methanol (6 mL), then water (6 mL). The reaction mixture was added on the cartridge then washed with PIPES (6 mL), 0.05 % TFA/MeOH (1/1, 12 mL). The purified fraction was eluted with methanol (10 mL) then evaporated under vacuum. The oxime ethers **2a-2k** were obtained as semi-crystallized oils.

**Table S1** : Oxime ethers **2a-2k** (structures, yields, HR-MS data).

**Table S2** : Oxime ethers **2a-2k** (NMR data).

**Table S1** : Oxime ethers **2a-2k** (structures, yields, HR-MS data).
