

Supplementary Figure 2: Effect of BI 905711-mediated tumor cell death on dendritic cells. (A, C) Representative flow cytometry histograms depicting surface expression of activation markers on dendritic cells upon 48h co-culture with GP2d (A) or DLD-1 (C) spheroids, exposed to different concentrations of LPS, bi-specific negative control or BI 905711. (B, D) Radar plots of z-scored cytokine and chemokine expression levels measured on the same co-cultures. (B) GP2d and dendritic cells co-culture. (D) DLD-1 and dendritic cells co-culture. Data represents two combined experiments.
