

Supplementary Fig. 3

Supplementary Figure 3. CRISPR screen to identify targets regulating the natural host antitumor response. A, Volcano plot comparing ID-IgG and IC-IgG genes to show whose inhibition can promote (blue) or inhibit (red) the host antitumor response. **B**, Top 10 candidates from (A) are shown. ID-IgG, B6 *Rag1*^{-/-} mice were treated with control IgG, IC-IgG, B6 WT mice treated with control IgG.
