

Supplementary Figure 4: IHC for cleaved caspase-8 and cleaved caspase-3 24h after the second administration of BI 905711 in GP2d xenograft tumors. Pre-treatment group: Tumour samples were taken on day 34 after a single treatment of BI 905711 (1.67mg/Kg) on day 1. Post-treatment group: Tumour samples were taken on day 35, 24 h after second administration of BI 905711. The average tumour volume on day 34 was 560 mm³.
