Supplementary Figure 1. (A) and (B) Representative output traces of the relative intensity at different mass to charge (m/z) ratios identified using Surface-enhanced laser desorption/ionization time-of-flight mass spectrometry (SELDI-TOF-MS), for plasma samples from dairy cows with (T) or without (C) subclinical hypocalcaemia. (C) Gel view of the greatest significant differences between the peaks of the cows with (T) or without (C) subclinical hypocalcaemia.
