

Gene symbol	Protein name	Number of clones
SPTAN1	Spectrin	15
HDLBP	Vigilin	14
DLG5	Disks large homolog 5	7
ARHGAP5	Rho GTPase-activating protein 5	7
YWHAE	14-3-3 Epsilon	6
MORC4	MORC family CW-type zinc finger protein 4	6
IKBKG	NF-kappa-B essential modulator	5
HOOK2	Protein Hook homolog 2	4
ACTN4	Alpha-actinin-4	3
YWHAB	14-3-3 Beta	3
TK1	Thymidine Kinase 1	3

Table 1.

Supplementary table 1. Selected list of putative interacting TSC2 partners identified by yeast 2-hybrid analysis. Gene symbol is followed by the protein name found to interact with TSC2. The right column shows the number of distinct clones that interacted with TSC2.
