

## **Content of Supplementary Tables**

TS1 describes the characteristics of the cell lines used in this study, including hormone receptor status and type of breast cancer.

TS2 lists the antibodies used and the method by which immunohistochemistry stained breast cancer specimens were scored.

TS3 describes the levels of IL8, Jak2, P-Jak2, STAT3, P-STAT3 and monocyte macrophages (CD68, CD163) in normal breast tissue and IBC specimens.

TS4 lists the expression levels of 80 cytokines, chemokines and growth factors in the conditioned media from SUM149 cells. Data were obtained from at least three independent studies.

TS5 lists the sequences of siRNAs that were used for gene silencing in this study.

TS6 lists the primer sequences and the genes targeted for qPCR studies carried out.

**Supplementary Table 1.** Source, clinical, and pathological features of breast cancer cell lines used

Cell line	Subtype	ER	PR	HER2	Source	Tumor Type
MCF-7	Luminal	+	+	-	PE	Met AC
T47D	Luminal	+	+	-	PE	IDC
MDA-MB-231	Basal	-	-	-	PE	Met AC
