Synthesis of **28**.

Dess-Martin periodinane (35 mg, 0.082 mmol, 1.5 eq.) was added in one portion to a solution of alcohol **21** (30 mg, 0.054 mmol) and pyridine (0.025 ml) in dichloromethane (2 ml) and the mixture was stirred for 1 h. A mixture of saturated sodium hydrogen carbonate solution and saturated sodium thiosulfate solution (1 ml, 1:1) was added to the reaction and stirred for 30 minutes. The mixture was extracted with diethyl ether (4 x 10 ml) and the combined organic extracts were washed with water and then saturated brine solution. Removal of the solvent under reduced pressure and purification of residue by rapid flash column chromatography on silica gel afforded *aldehyde 4* that was used directly in the next reaction.

The *ketone 5* (42 mg, 0.079 mmol) was dissolved in pentane (2 ml) and triethylamine (0.012 ml, 0.086 mmol) added before cooling the mixture to $-78\text{ }^{\circ}\text{C}$. Dicyclohexylboron chloride (0.016 ml, 0.075 mmol, 0.95eq w.r.t. **5**) was added dropwise and the flask immediately warmed to $0\text{ }^{\circ}\text{C}$ and stirred at this temperature for 1 h before re-cooling to $-78\text{ }^{\circ}\text{C}$. Aldehyde **4** in pentane (1 ml plus 2x0.5 ml) was added and the reaction was stirred at $-78\text{ }^{\circ}\text{C}$ for 8 h. Methanol (0.5 ml) and pH 7 buffer (0.5 ml) was added to the reaction at $-78\text{ }^{\circ}\text{C}$ and then immediately warmed to $0\text{ }^{\circ}\text{C}$ when hydrogen peroxide (0.5 ml, 30% v/v) and pH 7 buffer (1 ml) were added and the solution was stirred for 1 h. Addition of diethyl ether and extraction (3x10 ml) followed by washing the combined layers with of saturated sodium hydrogen carbonate solution, water and brine. After removal of the solvent under reduced pressure then residue was purified by flash column

chromatography on silica gel (15% EtOAc in hexane to 40% EtOAc in hexane) to afford *aldol product* **28** (17mg, 44%).
