

## Table of contents

**Additional file 1:** Combination screen 2D viability data (endpoint, 48h). Relative viability data are shown as combination matrices with one matrix per cell line and combination (one combination per page). (pdf, 96 KB)

**Additional file 2:** Combination screen 3D viability data (endpoint, 48h). Relative viability data are shown as combination matrices with one matrix per cell line and combination (one combination per page). (pdf, 96 KB)

**Additional file 3:** Viability-based Bliss excess score data (2D) for combination screen. Viability-based Bliss excess scores are shown in combination matrices with two matrices (2D and 3D) per cell line and combination (one combination per page). (pdf, 140 KB)

**Additional file 4:** Viability-based Bliss excess score data (3D) for combination screen. Viability-based Bliss excess scores are shown in combination matrices with two matrices (2D and 3D) per cell line and combination (one combination per page). (pdf, 141 KB)

**Additional file 5:** Combination screen 2D confluency data (endpoint, 48h). Relative confluency data are shown as combination matrices with one matrix per cell line and combination (one combination per page). (pdf, 92 KB)

**Additional file 6:** Combination screen 3D size data (endpoint, 48h). Relative size data are shown as combination matrices with one matrix per cell line and combination (one combination per page). (pdf, 91 KB)

**Additional file 7:** Confluency-based Bliss excess score data (2D) for combination screen. Confluency-based Bliss excess scores are shown in combination matrices with two matrices (2D and 3D) per cell line and combination (one combination per page). (pdf, 140 KB)

**Additional file 8:** Sized-based Bliss excess score data (3D) for combination screen. Size-based Bliss excess scores are shown in combination matrices with two matrices (2D and 3D) per cell line and combination (one combination per page). (pdf, 138 KB)

**Additional file 9:** Continuous apoptosis data (3D) from the long-term screen. Relative apoptosis over time is shown in time-response plots with one plot per cell line and treatment condition (combination and concentration). (pdf, 141 KB)

**Additional file 10:** Continuous apoptosis data (2D) from the long-term screen. Relative apoptosis over time is shown in time-response plots with one plot per cell line and treatment condition (combination and concentration). (pdf, 171 KB)

**Additional file 11:** Long-term screen 2D viability data (endpoint, 96h). Relative mean viability data are shown as combination matrices with one matrix per cell line and combination  $\pm$  standard deviation. (pdf, 87 KB)

**Additional file 12:** Long-term screen 3D viability data (endpoint, 96h). Relative mean viability data are shown as combination matrices with one matrix per cell line and combination  $\pm$  standard deviation. (pdf, 88 KB)

**Additional file 13:** Viability-based Bliss excess score data (2D) for the long-term screen. Viability-based mean Bliss excess scores  $\pm$  standard deviation are shown in combination matrices with two matrices (2D and 3D) per cell line and combination (one combination per page). (pdf, 24 KB)

**Additional file 14:** Viability-based Bliss excess score data (3D) for the long-term screen. Viability-based mean Bliss excess scores  $\pm$  standard deviation are shown in combination matrices with two matrices (2D and 3D) per cell line and combination (one combination per page). (pdf, 23 KB)

**Additional file 15:** Continuous confluency data (2D) from the long-term screen. Relative confluency over time is shown in time-response plots with one plot per cell line and treatment condition (combination and concentration). (pdf, 165 KB)

**Additional file 16:** Continuous size data (3D) from the long-term screen. Relative size over time is shown in time-response plots with one plot per cell line and treatment condition (combination and concentration). (pdf, 102 KB)
