

Figure S11

Figure S11. Both bHLH84-HA and TPR1-HA can be immunoprecipitated by SNC1-FLAG when all three protein were co-expressed in *N. benthamiana*.

Four-week-old *N. benthamiana* leaves were infiltrated with *Agrobacterium* strains carrying the indicated constructs. Total protein extracted from 3 g of *N. benthamiana* leaves for each infiltration collected 36 hours post-inoculation were subjected to IP. Three samples were incubated with anti-FLAG beads while one sample was incubated with protein A agarose beads, which served as negative control. Two western blots of bHLH84-HA from two independent experiments are presented.
