Altmetrics for US Institutions: Practical applications for research evaluation and other decision-making

Agenda

- Funded Research: Tracking online attention
- Publication Planning: Uncovering trends
- Communication Strategy: Creating opportunities

Who uses tools to track altmetrics to gauge research impact?

Heads of Research

Researchers: Tenured and Early-career

Research Faculty

Librarians

Research Services

Data Analysts

Communicators

Editors...

Why are tools used to track altmetrics to gauge research impact?

Related to Core Faculty

- Annual Merit Evaluation for all faculty
- Struggle to stay relevant and funded
- Special Population - Unique jobs
 - Impact the world, enrich youth, discover new things, job for life, pay your own salary, under constant scrutiny to prove themselves

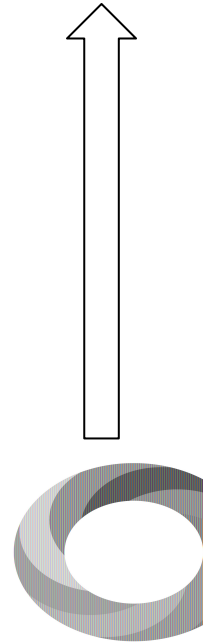

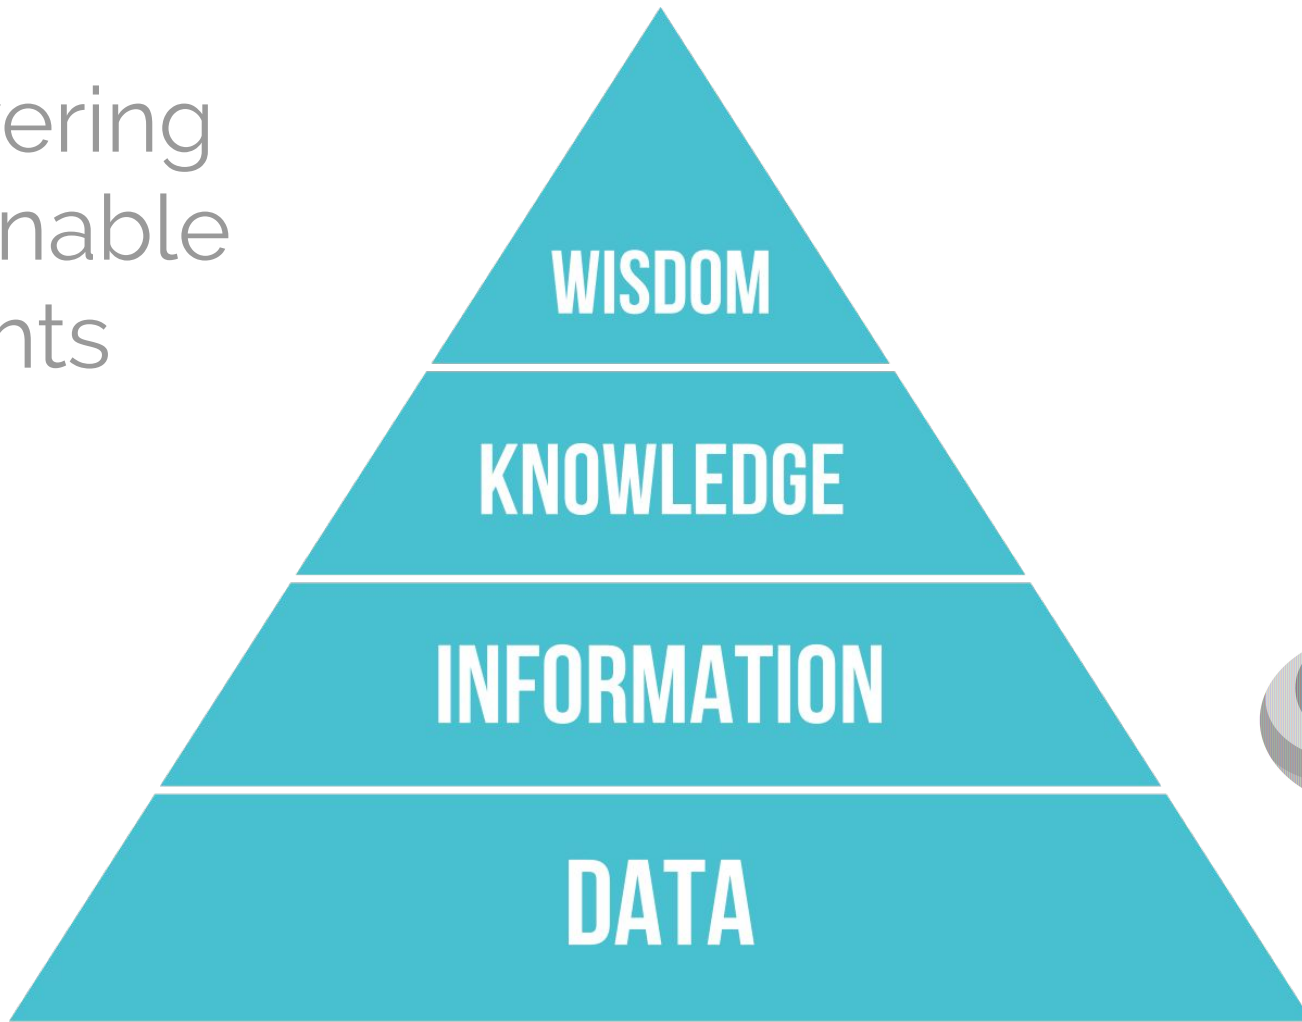

Why are tools used to track altmetrics to gauge research impact?

Related to an Institution's Reputation and Mission

- Need to identify impact of their faculty
- Accreditation cycles
- Commitment to the common good
- Academia – can be slow to change, reaction when a crisis
- Academic Reputation – important to individuals and the institution

Delivering
actionable
insights

Funded Research

See who is talking about your funded research--Earlier!

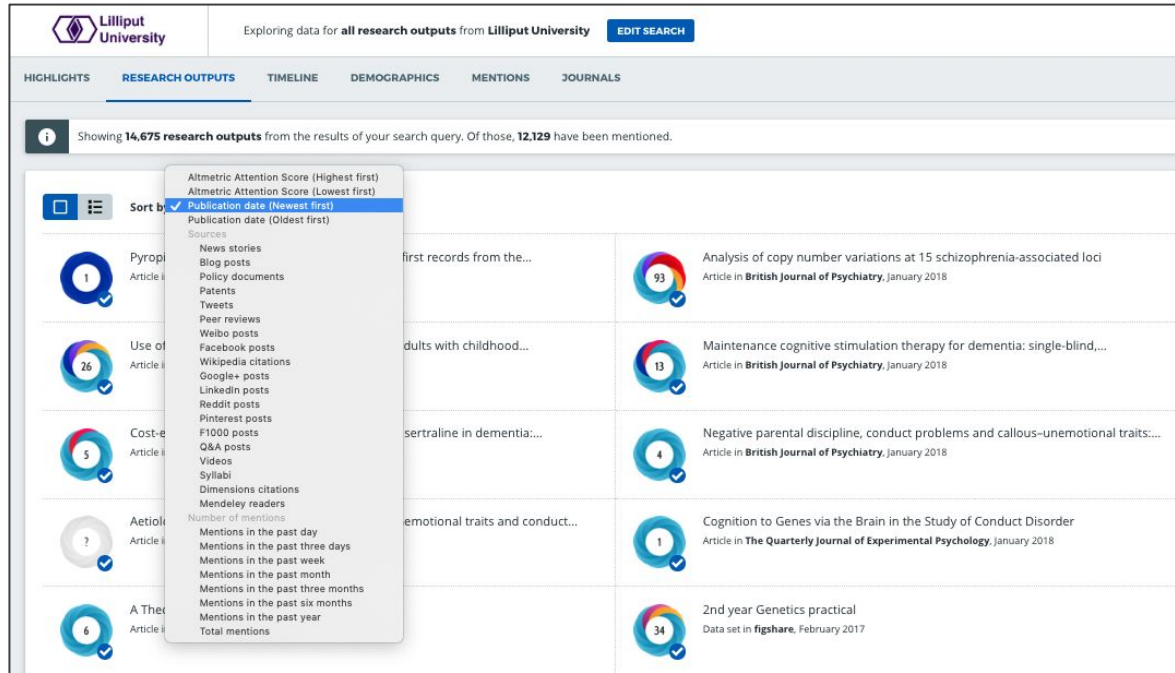

See who is talking about your funded research--Earlier!

Especially useful for:

- Early-career researchers
- Demonstrating impact of recently published work
- Highlighting successes in real-time
 - E.g. a monthly research round-up congratulating researchers across campus on a job well done.

See who is talking about your funded research--To add narrative

Example scenario: A department would like to demonstrate and describe the impact of their work for a grant application.

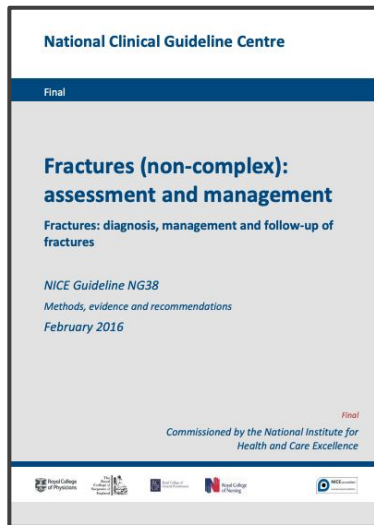

First, use Altmetric Explorer to search for research outputs and start building context around how people and organizations are using and discussing this work. Consider starting with:

- Policy mentions
- Mass media mentions
- Patent mentions
- Social media mentions

Oral administration of morphine versus ibuprofen to manage postfracture pain in children: a randomized trial

Review question: What is the most effective initial acute pharmacological management to alleviate pain in patients with a suspected long bone fracture (tibia and fibula, humerus, radius and ulna, or unspecified) in acute care settings?

Oral NSAIDs versus oral morphine (children)

Moderate quality evidence from a single RCT of 134 patients demonstrated no clinical difference between the interventions for change in pain score, with no serious imprecision.

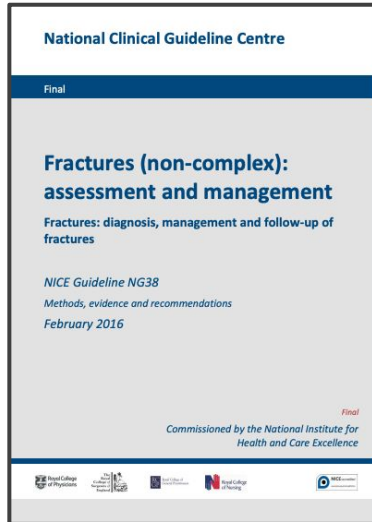

Moderate evidence from a single RCT of 134 patients demonstrated a clinical benefit with oral NSAIDs between the interventions for incidence nausea, with serious imprecision.

Moderate quality evidence from a single RCT of 134 patients demonstrated a clinical harm of oral NSAIDs over oral morphine in the reduction of further need for analgesia, with serious imprecision.

See who is talking about your funded research--To spot impact

Oral administration of morphine versus ibuprofen to manage postfracture pain in children: a randomized trial

Review question: What is the most effective initial acute pharmacological management to alleviate pain in patients with a suspected long bone fracture (tibia and fibula, humerus,

Recommendations and link to evidence

Children

1. For the initial management of pain in children (under 16s) with suspected long bone fractures of the legs (femur, tibia, fibula) or arms (humerus, radius, ulna), offer:
 - oral ibuprofen, or oral paracetamol, or both for mild to moderate pain
 - intranasal or intravenous opioids for moderate to severe pain (use intravenous opioids if intravenous access has been established).

Recommendations

NSAIDs over oral morphine in the reduction of further need for analgesia, with serious imprecision.

See who is talking about your funded research--To spot impact

Oral administration of morphine versus ibuprofen to manage postfracture pain in children: a randomized trial

See who is talking about your funded research--To add narrative

Key considerations:

- Who is benefitting from the research?
- When/where are conversations taking place?
- So what?

See who is talking about your funded research--To add narrative

“This work informed non-complex fracture guidelines from the National Institute of Health and Care Excellence recommending that pediatric patients receive ibuprofen to manage mild to moderate pain. More broadly, this research has influenced conversations in mass media surrounding opioid addiction; it has also been described on social media as “practice changing” research by clinicians and government officials, evidencing the dissemination of this work to audiences beyond academia.”
