

NN Diagrams Tasks List for Cards (Version 1.0)

“Rank these in order of how important they are in your use of research paper diagrams. You can add or discard any you wish” (blank cards will be available):

- Identifying system novelty or contribution of the paper
- Identifying layers, relations between components, or internal dependencies
- Identifying external dependencies
- Identifying corpora and data types
- Identifying representational choices (e.g. embeddings, graphs)
- Identifying the purpose of the system
- Identifying specific architectural features
- Identifying opportunity to alter the architecture
- Identifying what the author thinks is important to communicate
- Comparing to other systems
- Initial check to see if they use a particular thing I am interested in
- Index to navigate the paper
- Memory aid
- Aid for writing a summary of the paper
- Understanding how the system works
