

**Supplementary Figure 1.** Nutlin-3 and ATMi synthetic lethality is conserved in colorectal cancer cells, but not in untransformed cells. (Top) HCT116 or RKO colorectal cancer cells and IMR90 normal lung fibroblasts were treated with the indicated drugs for 24 hours prior to immunoblot analysis for p53 and cleaved caspase 3. Nucleolin serves as a loading control. (Bottom) Cells were treated as indicated for 24 hours prior to analysis of Annexin V staining via flow cytometry. Numbers are average of three independent experiments.
