

Trust yourself! Or maybe not: factors related to overconfidence and uncertainty assessments of software effort estimates

[Supplementary material](#)

The supplementary material for the paper “Trust yourself! Or maybe not: factors related to overconfidence and uncertainty assessments of software effort estimates” is composed of:

1. A document entitled “Research method”, including the oracle and the full set of exclusion criteria that we used.
2. A spreadsheet named “Extraction forms”, containing the template for data extraction and the forms for each of the selected papers.
3. A spreadsheet named “Factors”, containing the factors, the codes we created from the extraction forms, and the study originating each code. It also contains the mapping of papers and measurement strategies, and of papers and research strategies.
4. A spreadsheet named “Metrics”, containing a template that practitioners can use to calculate three of the main metrics we found in our study.
5. A document entitled “Metrics – others”, with the description of the measurement strategies that we classified under the label “others”, as part of our results.
