

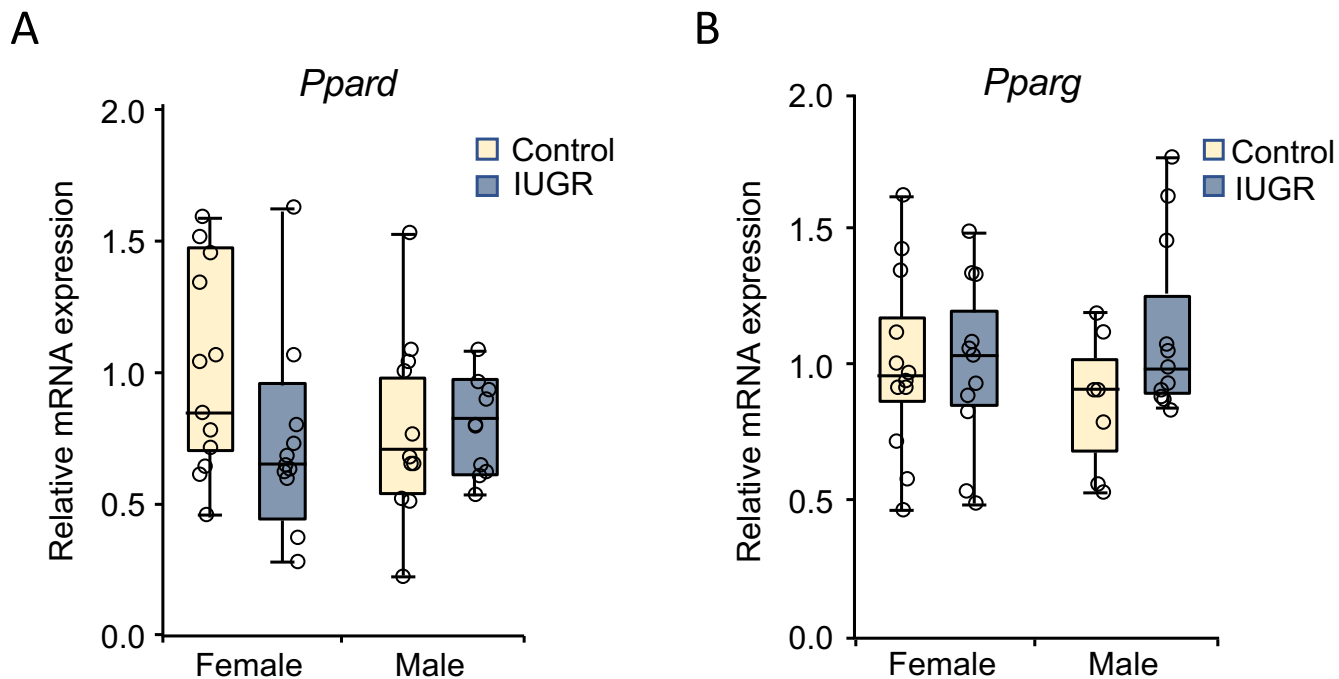

Fig.S2

**Supplementary Fig. 2. Regulation of PPAR genes in IUGR.**

Boxplots showing *Ppard* (**A**) and *Pparg* (**B**) gene expression in fetal cardiac tissues collected at 22 days of gestation from the IUGR and the control group. Gene expression levels were determined by qPCR analysis and normalized to *Rplp0* expression. Each data point represents one fetus from one litter for each group.
