Running title: CircInteractome: circRNA-binding partners

Key words: RNA-binding proteins; sponge circRNAs; divergent primer design; circRNA IRES; transcriptome; circRNA-miRNA; CLIP-Seq; circRNA siRNA

¹These authors contributed equally to this work.

Supplementary Figures and Tables

Supplementary Figure S1	RBP binding to circRNAs
Supplementary Figure S2	Genomic and mature sequence of circRNAs
Supplementary Figure S3	CircRNA binding sites for a given interacting RBP
Supplementary Figure S4	RBP-binding site on circRNA junction and flanking sequence
Supplementary Figure S5	miRNA-circRNA interactions predicted by CircInteractome
Supplementary Figure S6	Divergent primer design output
Supplementary Figure S7	Design of siRNAs directed at circRNA junction
Supplementary Table S1	RBP datasets used in this study
Supplementary Table S2	RBPs interacting with circRNAs
Supplementary Table S3	IRES in circRNAs
Supplementary Table S4	miRNA super-sponge circRNAs

Figure S1. RBPs binding to circRNAs. **A.** RBPs binding to mature circRNAs. **B.** Relative number of circRNAs targeted by any RBP on the junction compared to the number of circRNA targeted at mature circRNA sequence. **C.** Ratio of number of circRNAs targeted by RBPs on flanking sequences of circRNA relative to mature circRNA.

Figure S2. Genomic and mature sequences of a given circRNA. Illustrative screenshots from the CircInteractome showing the genomic (*top*) and mature circRNA (*bottom*) sequence for hsa_circ_0000020. Blue line indicates a break in the sequence.

Figure S3: CircRNA binding sites for a given interacting RBP. **A.** RBP (HNRNPC) binding sites on all reported circRNAs. **B.** Search for specific RBP (HNRNPC) binding site on any circRNA (hsa_circ_00000143).

Figure S4. RBP-binding site on circRNA junction and flanking sequence. **A.** Details of EIF4A3 binding sites on hsa_circ_0000020 junction sequence. **B.** Details of EIF4A3 binding sites on hsa_circ_0000020 flanking sequence.

Figure S5. miRNA-circRNA interactions predicted by CircInteractome.

Figure S6. Divergent primer design output. **A.** Divergent primer design output file for has_circ_0000020 using NCBI primer design tool. **B.** Divergent primer design output file for has_circ_0000020 using Primer3 (v. 0.4.0) primer design tool.

Figure S7. Design of siRNAs directed at circRNA junction. The numbers in the parentheses represent the priority. To finalize the sequence, the user needs to add dinucleotide (dTdT) 3'DNA overhangs to increase the efficiency of the siRNA.

Dudekula, Panda et al., Suppl. Fig. S1

Length: 13589 bp

Length: 551 bp

Help

This tool will search for RNA Binding Protein Cluster Tags matching with Human Circular RNA

Step1: Enter your RNA-binding protein of interest (e.g., HNRNPC)
HNRNPC (Max: 20 chars)

Step2: Enter your Circular RNA of interest
(Max: 20 chars)

Step3: Select Output Type (Download Excel File or Online)
Web

Step4: Click on "RNA-binding Protein Search" button to search Circular RNA Database

RNA-binding Protein Search Reset
