THE THREE RINGS OF POWER

"The three rings, fairest of all, the Elf-lords hid from him, and his hand never touched them or sullied them."

ONE RING TO RULE THEM ALL

"The Enemy still lacks one thing to give him strength and knowledge to beat down all resistance. ... He lacks the One Ring."

- The Fellowship of the Ring, Chapter 2.

JSON-LD

TABLES

JSON

RDF

Background

What is JSON?

- JSON = JavaScript object notation.
- Simple, structured data exchange format.
- Most common data transmission format for APIs.
- Consumed by most programming languages and web pages.

Reference: <https://www.json.org/>

What is JSON-LD?

- JSON-based serialization for Linked Data.
- Valid JSON
- 100% compatible with existing JSON tools.
- Preferred format for structured metadata in web pages.
- A W3C standard and a serialization of RDF.

```
{
  "@context": {
    "dcterms": "http://purl.org/dc/terms/",
    "dcterms:type": {"@type": "@id"}
  },
  "@graph": [
    {
      "@id": "https://www.inaturalist.org/observations/82716069",
      "@type": "http://purl.org/dc/dcmitype/Sound",
      "dcterms:title": "Northern Cardinal song"
    }
  ]
}
```

JSON-LD

```
@prefix dcterms: <http://purl.org/dc/terms/> .
<https://www.inaturalist.org/observations/82716069>
  a <http://purl.org/dc/dcmitype/Sound> ;
  dcterms:title "Northern Cardinal song".
```

RDF Turtle

```
<rdf:RDF xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"
  xmlns:dcterms="http://purl.org/dc/terms/">
  <rdf:Description rdf:about="https://www.inaturalist.org/observations/82716069">
    <rdf:type rdf:resource="http://purl.org/dc/dcmitype/Sound"/>
    <dcterms:title>Northern Cardinal song</dcterms:title>
  </rdf:Description>
</rdf:RDF>
```

RDF/XML

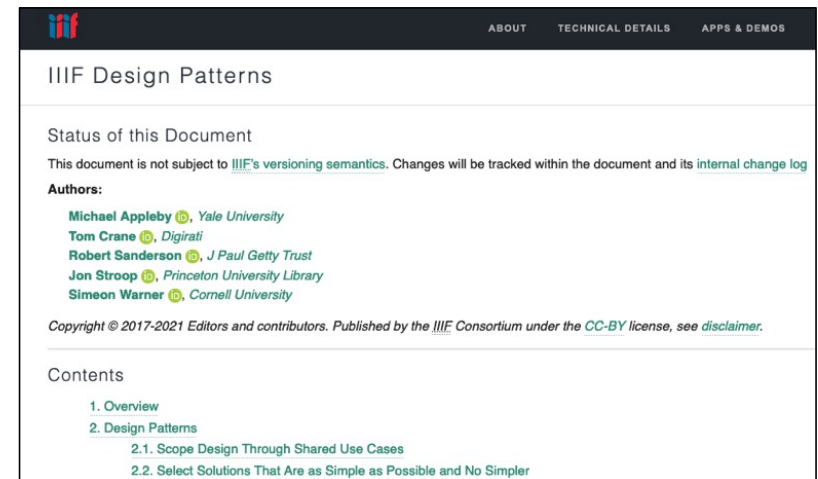

Reference: https://iif.io/api/annex/notes/design_patterns/

What does "narrow design pattern" mean?

Have or eat? Have or eat?
Have or eat? ...

[Anamsiddiqui125](#), [CC BY-SA 4.0](#), via Wikimedia Commons

- Inspired by IIIF Design Patterns document.

What does "narrow design pattern" mean?

- Section 2.7: "IIF specifications ... should not require an RDF based development stack to implement, but it must be possible to implement using one."

```
{
  "@context": {
    "dcterms": "http://purl.org/dc/terms/",
    "dcterms:type": {"@type": "@id"}
  },
  "@graph": [
    {
      "@id":
        "https://www.inaturalist.org/observations/82716069",
      "@type": "http://purl.org/dc/dcmitype/Sound",
      "dcterms:title": "Northern Cardinal song"
    }
  ]
}
```

JSON-LD = RDF

Wow! That's RDF !!!

LINKED DATA
ADVOCATE

What does "narrow design pattern" mean?

- Section 2.8: "Developers must be able to treat the representation as plain JSON, with a predictable structure."

Wow! That's JSON !!!

```
{
  "@context": {
    "dcterms": "http://purl.org/dc/terms/",
    "dcterms:type": {"@type": "@id"}
  },
  "@graph": [
    {
      "@id":
        "https://www.inaturalist.org/observations/82716069",
      "@type": "http://purl.org/dc/dcmitype/Sound",
      "dcterms:title": "Northern Cardinal song"
    }
  ]
}
```

JSON-LD = JSON

Reference: https://iiif.io/api/annex/notes/design_patterns/

What does "narrow design pattern" mean?

- Section 3: describes restrictions for predictable structure and familiar patterns.

Wow! That
looks something
like a row from
my table !!!

```
...  
"dcterms:title": "Northern Cardinal song",  
"dcterms:identifier": "https://www.inaturalist.org/observations/82716069",  
"dcterms:type": "http://purl.org/dc/dcmitype/Sound",  
"dc:rights": "(c) 2021 cecildev8n5",  
"xmp:CreateDate": "2021-06-12T14:08:10.3-04:00",  
...  
"dc:format": "audio/mp4",  
"ac:mediaDuration": 30.186,  
"ac:mediaSpeed": 1.0  
...
```

JSON-LD = TABULAR STRUCTURE-LIKE

Transformation between formats

- A narrow JSON-LD design pattern facilitates:
 - having cake (Linked Data) and eating it (consumable JSON)
 - lossless and self-describing transformation between formats

SPARQL Update
(have cake)

application
consumes JSON
(eat cake)

RDF graph

```

JSON-LD

Design patterns for TDWG

Overarching principles

Reference: <http://rs.tdwg.org/dwc/terms/simple/>

1. The "Simple Darwin Core" principle:

- The main JSON object should be mappable to a row in a table.
- The names (i.e. keys) of the name/value pairs should be the "term names" of the properties denoted by the column headers.
- The values of the name/value pairs should be the data values in the row representing the main object.

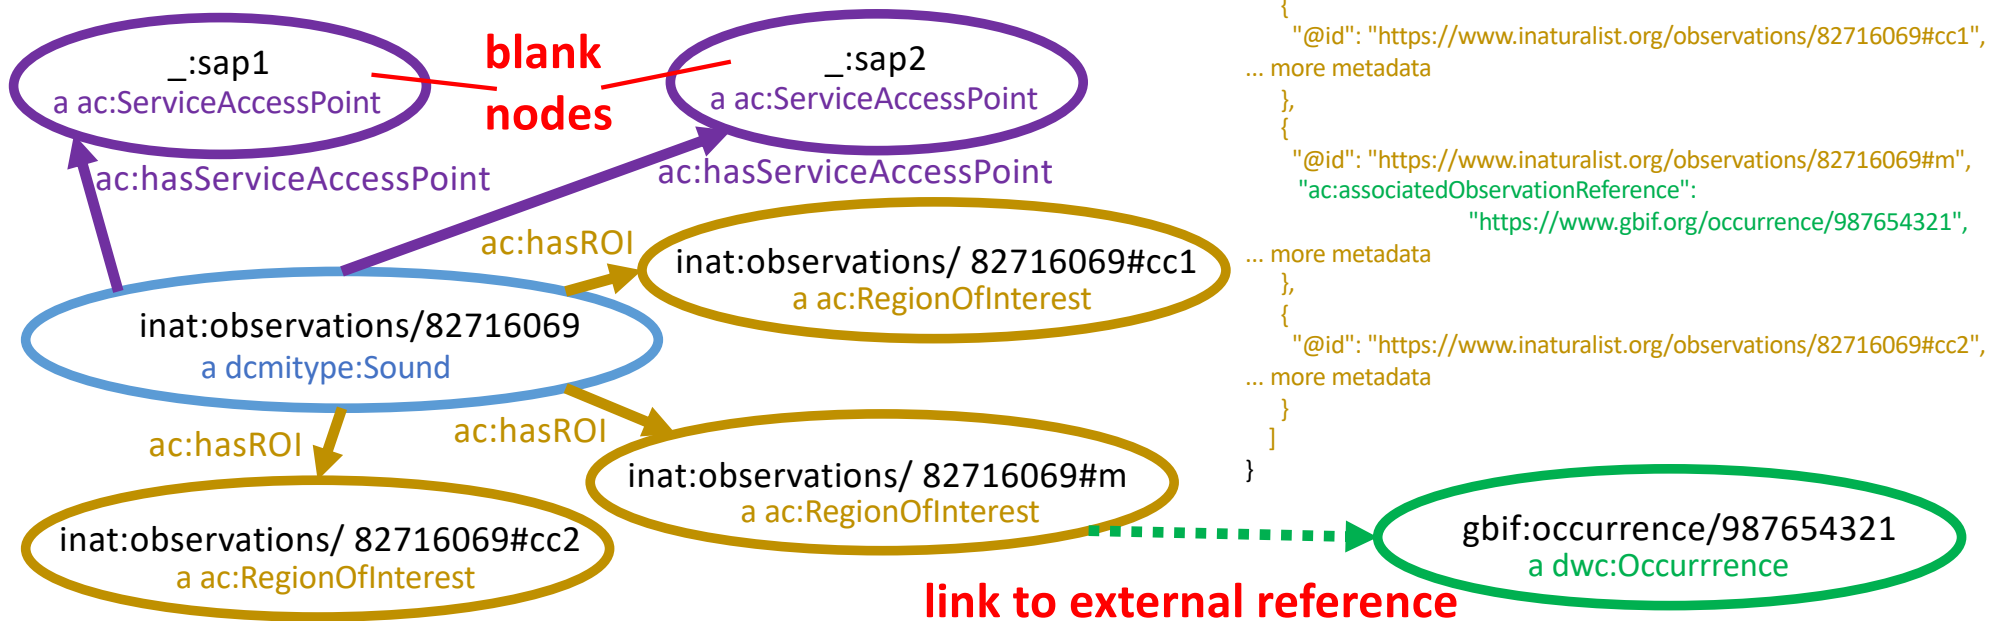

```
{
  "@id": "https://www.inaturalist.org/observations/82716069",
  "@type": "http://purl.org/dc/dcmitype/Sound",
  "dcterms:title": "Northern Cardinal (Cardinalis cardinalis) on June 12, 2021 at 02:08 PM by cecildev8n5",
  "dcterms:identifier": "https://www.inaturalist.org/observations/82716069",
  "dcterms:type": "http://purl.org/dc/dcmitype/Sound",
  "ac:metadataLanguage": "http://id.loc.gov/vocabulary/iso639-2/eng",
  "dc:rights": "(c) 2021 cecildev8n5",
  "xmp:CreateDate": "2021-06-12T14:08:10.3-04:00"
}
```

	A	B	C	D	E	F
1	dcterms:title	dcterms:identifier	dcterms:type	ac:metadataLanguage	dc:rights	xmp:CreateDate
2	Northern Cardinal (Cardinalis cardinalis)	https://www.inaturalist.org/observations/82716069	http://purl.org/dc/dcmitype/Sound	http://id.loc.gov/vocabulary/iso639-2/eng	(c) 2021 cecildev8n5	2021-06-12T14:08:10.3-04:00

Overarching principles

2. The "star schema" principle:

- No more than one level of nesting
- Facilitate 1:many relationships to unidentified objects
- Other links by reference.

Reference: <http://rs.tdwg.org/dwc/terms/guides/text/>

```
{
  "@id": "https://www.inaturalist.org/observations/82716069",
  "@type": "http://purl.org/dc/dcmitype/Sound",
  ... more metadata
  "ac:hasServiceAccessPoint": [
    {
      ... anonymous SAP 1
    },
    {
      ... anonymous SAP 2
    }
  ],
  "ac:hasROI": [
    {
      "@id": "https://www.inaturalist.org/observations/82716069#cc1",
      ... more metadata
    },
    {
      "@id": "https://www.inaturalist.org/observations/82716069#m",
      "ac:associatedObservationReference":
        "https://www.gbif.org/occurrence/987654321",
      ... more metadata
    },
    {
      "@id": "https://www.inaturalist.org/observations/82716069#cc2",
      ... more metadata
    }
  ]
}
```

Overarching principles

3. Simple but self-describing:

- Value structure should be simple.
- Semantics should be described in the @context section.
- The @context section should be included in the document.

```
{
  "@context": {
    "ac": "http://rs.tdwg.org/ac/terms/",
    "dc": "http://purl.org/dc/elements/1.1/",
    "xmp": "http://ns.adobe.com/xap/1.0/",
    "xmp:CreateDate": { "@type": "http://www.w3.org/2001/XMLSchema#dateTime" },
    "ac:metadataLanguage": { "@type": "@id" }
  },
  "@graph": [
    {
      "@id": "https://www.inaturalist.org/observations/82716069",
      "@type": "http://purl.org/dc/dcmitype/Sound",
      "dc:rights": "(c) 2021 cecildev8n5",
      "xmp:CreateDate": "2021-06-12T14:08:10.3-04:00",
      "ac:metadataLanguage": "http://id.loc.gov/vocabulary/iso639-2/eng"
    }
  ]
}
```

this

**define namespace and
place value typing
in @context**

```
{
  "@context": {
    "ac": "http://rs.tdwg.org/ac/terms/",
    "xmp": "http://ns.adobe.com/xap/1.0/"
  },
  "@graph": [
    {
      "@id": "https://www.inaturalist.org/observations/82716069",
      "@type": "http://purl.org/dc/dcmitype/Sound",
      "http://purl.org/dc/elements/1.1/rights": "(c) 2021 cecildev8n5",
      "xmp:CreateDate": {
        "@value": "2021-06-12T14:08:10.3-04:00",
        "@type": "http://www.w3.org/2001/XMLSchema#dateTime"
      },
      "ac:metadataLanguage": {
        "@id": "http://id.loc.gov/vocabulary/iso639-2/eng"
      }
    }
  ]
}
```

not this

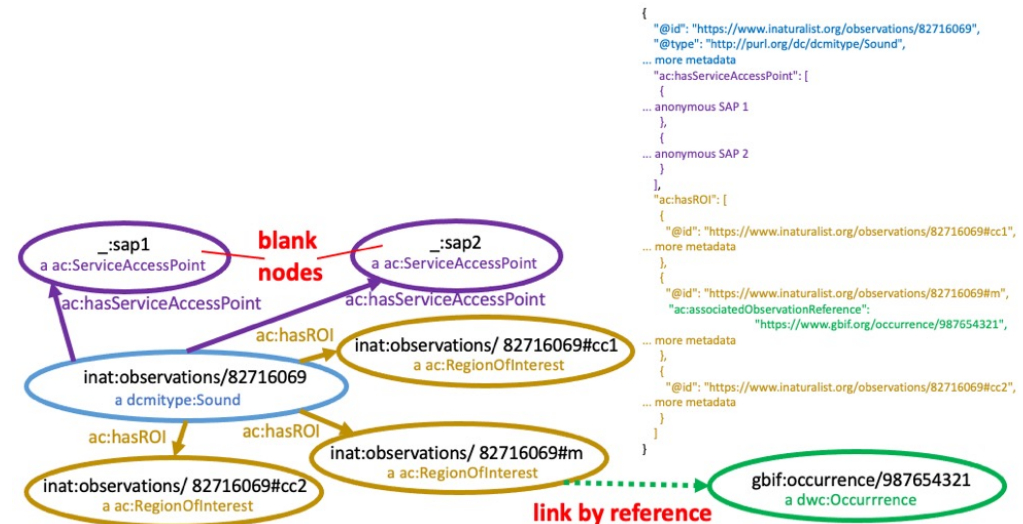

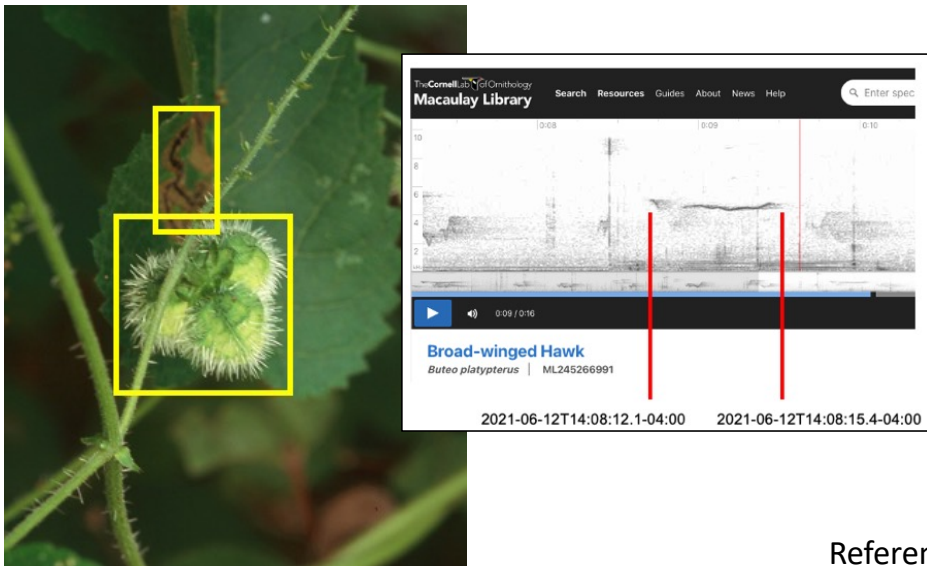

Design pattern details in a 11-point document

- [bundled with this PDF]

Three examples

1. Audubon Core Regions of Interest (ROIs)

- Refer to specific parts of media items.
- 1:many relationship suitable for design pattern
- "Recipes" document with examples: <https://github.com/tdwg/ac/blob/master/roi-recipes.md>

Reference: <http://rs.tdwg.org/ac/doc/termlist/#711-region-of-interest-vocabulary>

2. Multilingual controlled vocabularies

Darwin Core ResourceRelationship class:

TRIPLE STORE

- RDF reification vocabulary model for describing a triple + Wikibase model for references

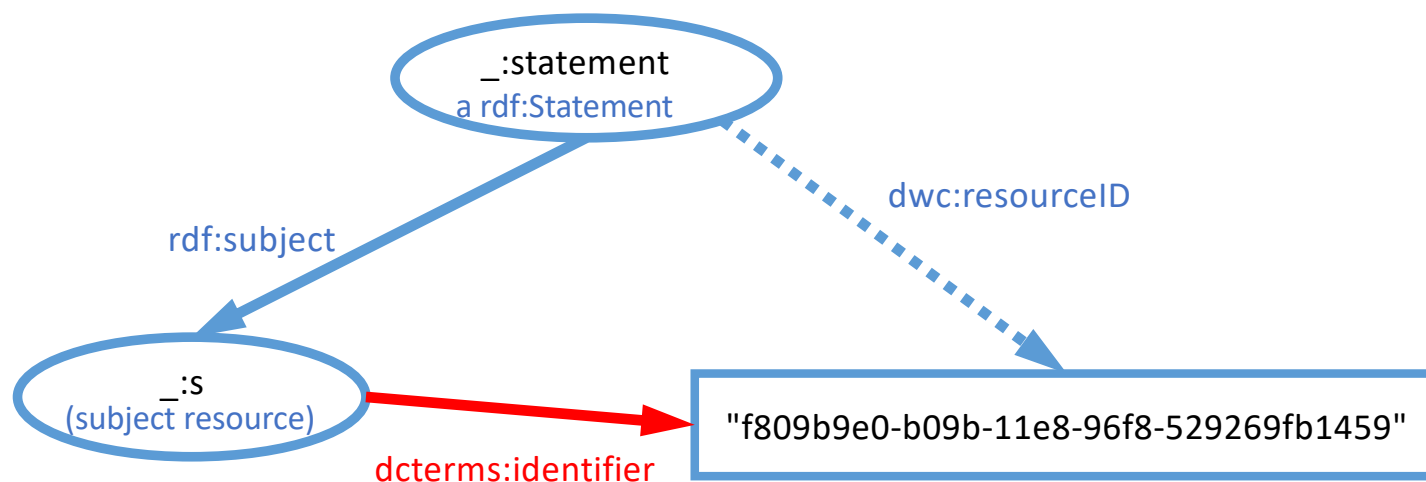

predicates must be
identified by an IRI

References: https://www.w3.org/TR/rdf-schema/#ch_reificationvocab
<https://heardlibrary.github.io/digital-scholarship/lod/wikibase/#references>

Darwin Core ResourceRelationship class: TRIPLE STORE

- dwc:resourceID = "An identifier for the resource that is the subject of the relationship."
- Similar model for rdf:predicate and rdf:object

Darwin Core ResourceRelationship class: API

- JSON-LD maps ResourceRelationship terms to RDF graph
- Generally follows the same design pattern as before.

```
{
  "@context": {
    "rdf": "http://www.w3.org/1999/02/22-rdf-syntax-ns#",
    "dwc": "http://rs.tdwg.org/dwc/terms/",
    "dcterms": "http://purl.org/dc/terms/",
    "dwc:relationshipEstablishedDate": {"@type": "http://www.w3.org/2001/XMLSchema#dateTime"}
  },
  "@graph": [
    {
      "@type": "http://www.w3.org/1999/02/22-rdf-syntax-ns#Statement",
      "dcterms:identifier": "04b16710-b09c-11e8-96f8-529269fb1459",
      "dwc:relationshipEstablishedDate": "1963-03-08T14:07-0600",
      "dwc:relationshipRemarks": "pollinator captured in the act",

      "rdf:object": {"dcterms:identifier": "dc609808-b09b-11e8-96f8-529269fb1459"},
      "prov:wasDerivedFrom": {"rdfs:label": "Julie Woodruff"}
    }
  ]
}
```

Data at: <https://gist.github.com/baskaufs/f8f8ddc3b2161beea789492e350ec374>

Darwin Core ResourceRelationship class:

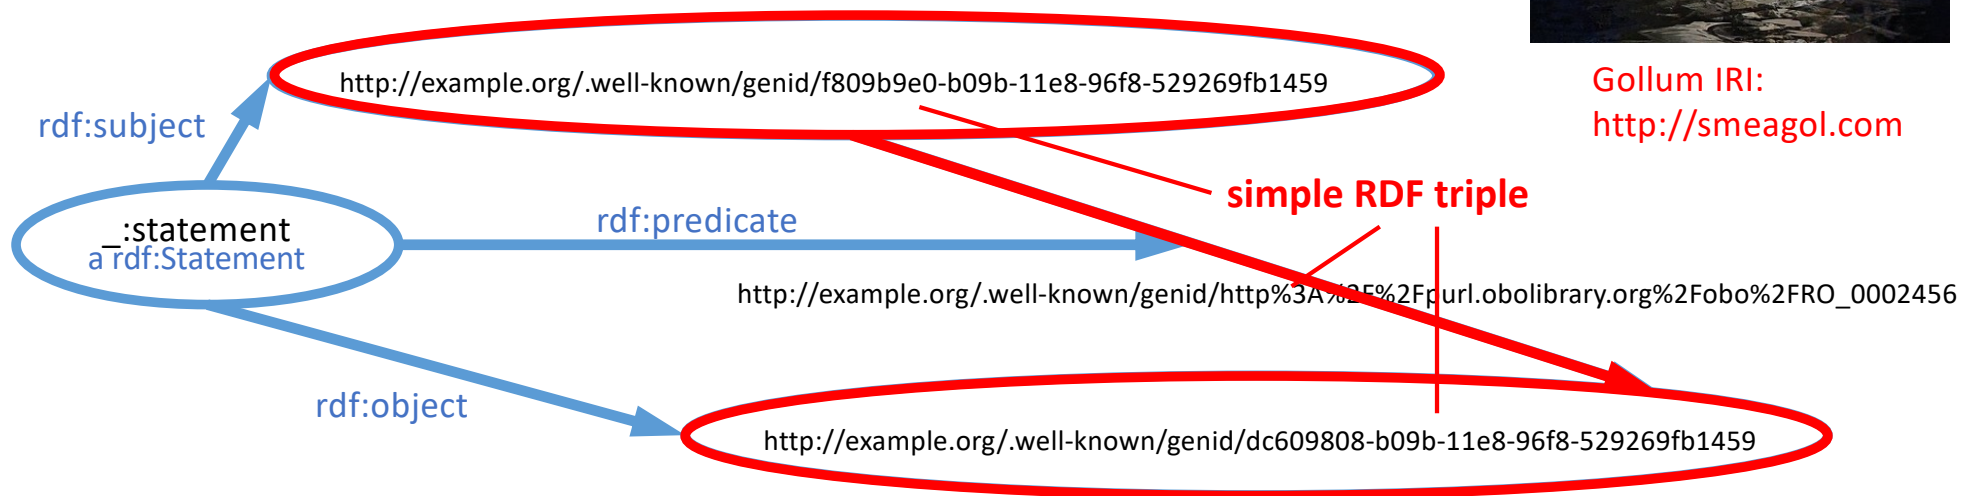

TRIPLE STORE

- Use SPARQL CONSTRUCT to generate **Skolem IRIs** from IDs to replace blank nodes and generate a predicate IRI.
- Resulting **RDF triples** easily queried.

```
prefix rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#>
prefix dcterms: <http://purl.org/dc/terms/>
construct {?subject ?predicate ?object}
from <https://resourcerelationship>
where {
  bind("http://example.org/.well-known/genid/" as ?skolem)
  ?statement rdf:subject/dcterms:identifier ?subjectID.
  ?statement rdf:predicate/dcterms:identifier ?predicateID.
  ?statement rdf:object/dcterms:identifier ?objectID.
  bind(iri(concat(?skolem, encode_for_uri(?subjectID))) as ?subject)
  bind(iri(concat(?skolem, encode_for_uri(?predicateID))) as ?predicate)
  bind(iri(concat(?skolem, encode_for_uri(?objectID))) as ?object)
}
```

Gollum IRI:
