

Fig 5 Culture morphology of *Resinogalea araucana*, isolate CMW 57580. (a) Colonies after 28 d in darkness, from left to right, MEA (20 °C), MEA (25 °C), PDA (20 °C), PDA (25 °C); (b) Texture on MEA at 20 °C; (c) Texture on MEA at 25 °C; (d) Texture on PDA at 25 °C; (e–f) Sporodochia in 8-week or older cultures on MEA; (g) Conidiophores on mycelium; (h–l) Conidiogenous cells: terminal (h–i), lateral denticles (j–k), definite phialides (l); (m) Phialides on swollen and melanized hyphae; (n) Phialides emerging from pseudostromatic hyphae on sporodochia; (o) Conidia. Scale bars: (e–f) = 2 mm; (g) = 50 μ m; (h, j, m–n) = 10 μ m; (i, k–l, o) = 5 μ m.
