

This folder contains four files, each represents the elicitation results for one of the four domains (apartment, restaurant, clinic, hiking trail). The domain name can be found at the upper right corner of each file. We explain the columns below.

- Column A shows the concepts elicited, in the format of X:Y. Here Y is the name of the concept, while X is the depth 1 concept that Y is under.
- Column B and C shows whether the Column A concept is elicited from the Control (C) or the Test (T) group. A “Y” is marked in the group’s column if the concept is elicited from that particular group.
- Column D and E shows the concept’s depth within the domain’s ontology tree. For example, depth 2 concepts are direct descendents of the depth 1 concept marked at the left hand side of the colon. Depth 3 and 4 nodes are direct descendents of the depth 2 and 3 nodes most directly above them, unless there is a note in the row specifying the concept’s parent.
- Column F specifies the relation of the child concept to its parent concept.
- Column G, if exists, is the note of exception explained above.
