

An interesting pattern of primes

By Luis Felipe Massena Misiec

If you observe below there is a correlation between x and y . x will always be a positive even number and y will always be a positive odd number and its subtraction will give 7 until a certain prime number and there after it will be a different correlation where the result is 8 and after a while it will be 9 and so on. Later i will repost its new correlation, for now it is enough to see that this pattern holds until the 1062 nd prime.

mathematica

(Defining the ordered pairs)

```
pairs = {{8, 1}, {10, 3}, {12, 5}, {14, 7}, {16, 9}, {18, 11}, {20, 13}, {22, 15}, {24, 17}, {26, 19}, {28, 21}, {30, 23}};
```

(Function to verify if a is prime)

```
isPrimeZ[x_, y_] := Module[{z},  
  z = 7000 + 914 + y;  
  z == 7907 + x && PrimeQ[z]  
];
```

(Filttering the pairs that satisfy the condition)

```
results = Select[pairs, isPrimeZ[#[[1]], #[[2]]] &];
```

(Exhibiting the results)

```
results
```

```
{{12,5}, {20,13}, {26,19}, {30,23}}
```

mathematica

(Defining the ordered pairs)

```
pairs =  
{{10,2},{12,4},{14,6},{16,8},{18,10},{20,12},{22,14},{24,16},{26,18},{28,20},{30,22},

Now observe the following sequence of pairs that satisfy the rule established in **RULE 1**

```

pairs = {{12, 5}, {20, 13}, {26, 19}, {30, 23}, {42, 35}, {44, 37}, {56, 49}, {86, 79}, {102, 95}, {104, 97}, {110, 103}, {132, 125}, {146, 139}, {152, 145}, {162, 155}, {174, 167}, {180, 173}, {182, 175}, {186, 179}, {194, 187}, {204, 197}, {210, 203}, {216, 209}, {240, 233}, {254, 247}, {260, 253}, {264, 257}, {272, 265}, {284, 277}, {302, 295}, {312, 305}, {314, 307}, {324, 317}, {326, 319}, {330, 323}, {336, 329}, {356, 349}, {362, 355}, {366, 359}, {380, 373}, {384, 377}, {386, 379}, {390, 383}, {404, 397}, {410, 403}, {422, 415}, {446, 439}, {456, 449}, {462, 455}, {470, 463}, {480, 473}, {482, 475}, {512, 505}, {516, 509}, {522, 515}, {524, 517}, {536, 529}, {540, 533}, {554, 547}, {560, 553}, {594, 587}};

```

```

result = FoldList[#2 - 12 &, Last[pairs][[1]], Reverse[Most[pairs]]][[All, 1]]

a=Differences[result]

b=a*-1

c=Reverse[b]

numbers = c

result = FoldList[Plus, 12, numbers]

```

and then check for the results...

```
{594,548,542,528,524,512,510,504,500,470,468,458,450,444,434,410,398,392,378,374,372,368,354,350,344,324,318,314,312,302,300,290,272,260,252,248,242,228,204,198,192,182,174,170,168,162,150,140,134,120,98,92,90,74,44,32,30,18,14,8,0}
```

```
{-46,-6,-14,-4,-12,-2,-6,-4,-30,-2,-10,-8,-6,-10,-24,-12,-6,-14,-4,-2,-4,-14,-4,-6,-20,-6,-4,-2,-10,-2,-10,-18,-12,-8,-4,-6,-14,-24,-6,-6,-10,-8,-4,-2,-6,-12,-10,-6,-14,-22,-6,-2,-16,-30,-12,-2,-12,-4,-6,-8}
```

```

```

```
{8,6,4,12,2,12,30,16,2,6,22,14,6,10,12,6,2,4,8,10,6,6,24,14,6,4,8,12,18,10,2,10,2,4,6,20,6,4,14,4,2,4,14,6,12,24,10,6,8,10,2,30,4,6,2,12,4,14,6,46}
```

```
{8,6,4,12,2,12,30,16,2,6,22,14,6,10,12,6,2,4,8,10,6,6,24,14,6,4,8,12,18,10,2,10,2,4,6,20,6,4,14,4,2,4,14,6,12,24,10,6,8,10,2,30,4,6,2,12,4,14,6,46}
```

```
{12,20,26,30,42,44,56,86,102,104,110,132,146,152,162,174,180,182,186,194,204,210,216,240,254,260,264,272,284,302,312,314,324,326,330,336,356,362,366,380,384,386,390,404,410,422,446,456,462,470,480,482,512,516,522,524,536,540,554,560,606}
```

these are the even parts of the pairs that satisfy RULE 1. Subtract 7 from the even numbers and you get the odd parts of the ordered pairs.

Now just to clarify the number 914 used in the equation of z in RULE 1 comes from subtracting the 999th prime number from the multiplication of 7*999, which is 7907-(7*999)=914

```
pairs = {{12, 5}, {20, 13}, {26, 19}, {30, 23}, {42, 35}, {44, 37}, {56, 49}, {86, 79}, {102, 95}, {104, 97}, {110, 103}, {132, 125}, {146, 139}, {152, 145}, {162, 155}, {174, 167}, {180, 173}, {182, 175}, {186, 179}, {194, 187}, {204, 197}, {210, 203}, {216, 209}, {240, 233}, {254, 247}, {260, 253}, {264, 257}, {272, 265}, {284, 277}, {302, 295}, {312, 305}, {314, 307}, {324, 317}, {326, 319}, {330, 323}, {336, 329}, {356, 349}, {362, 355}, {366, 359}, {380, 373}, {384, 377}};

A expressão `nextOddNumbers = secondElements + 2`

`Range[Length[secondElements]]` no contexto fornecido está gerando uma lista de números ímpares subsequentes com base nos elementos da lista `secondElements`.

Aqui está uma explicação detalhada:

1. `secondElements`: Esta é uma lista que contém o segundo elemento de cada par ordenado. Por exemplo, se `orderedPairs` é `{{12, 5}, {20, 13}, {26, 19}, ...}`, então `secondElements` será `{5, 13, 19, ...}`.
2. `Range[Length[secondElements]]`: Esta função gera uma lista de inteiros de 1 até o comprimento de `secondElements`. Se `secondElements` tem 3 elementos, `Range[3]` será `{1, 2, 3}`.
3. `2 Range[Length[secondElements]]`: Multiplica cada elemento da lista gerada por `Range` por 2. Então, se `Range[3]` é `{1, 2, 3}`, `2 Range[3]` será `{2, 4, 6}`.
4. `secondElements + 2 Range[Length[secondElements]]`: Adiciona cada elemento da lista `secondElements` ao correspondente elemento da lista `2 Range[Length[secondElements]]`. Por exemplo, se `secondElements` é `{5, 13, 19}` e `2 Range[3]` é `{2, 4, 6}`, então `nextOddNumbers` será `{5+2, 13+4, 19+6}`, resultando em `{7, 17, 25}`.

Portanto, `nextOddNumbers` é uma lista de números ímpares subsequentes gerados a partir dos elementos de `secondElements`.

I just asked AI copilot of Microsoft if it could continue the pattern of Out[36]= {5,8,9,8,5,0,-7,-16,-27,-40,-55,-72,-91,-112,-135,-160,-187,-216,-247}

For more 20 numbers and the answer was

10:41

4G

← ≡ **Padrão de Decréscimo de 2** ...

-1015 \ -1015 - 65 &= -1080 \ -1080 - 67 &= -1147 \
-1147 - 69 &= -1216 \ -1216 - 71 &= -1287 \
\end{align*}]

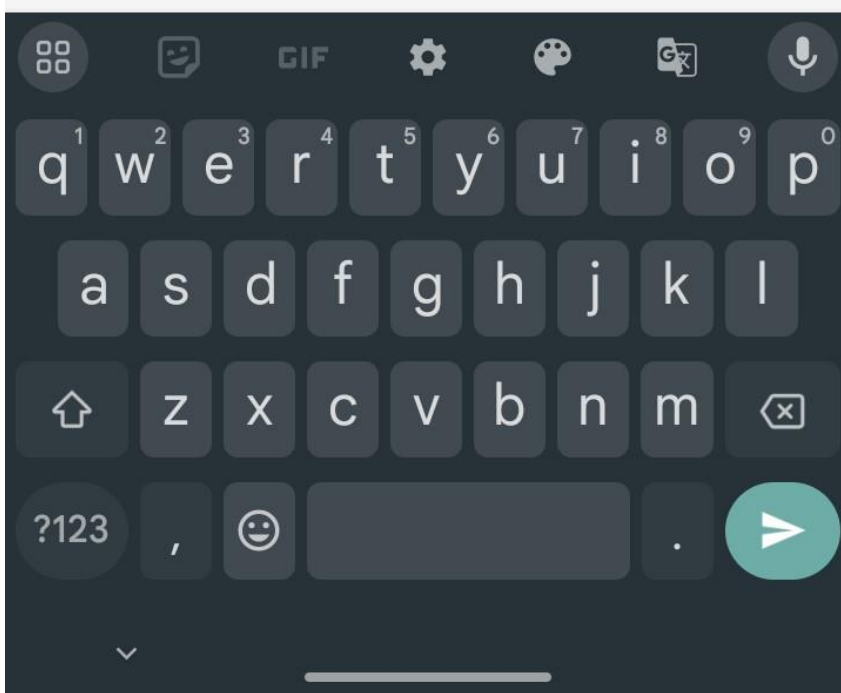

Portanto, a sequência completa com os próximos 20 números é:

[{5, 8, 9, 8, 5, 0, -7, -16, -27, -40, -55, -72, -91, -112,
-135, -160, -187, -216, -247, -280, -315, -352, -391,
-432, -475, -520, -567, -616, -667, -720, -775, -832,
-891, -952, -1015, -1080, -1147, -1216, -1287}]

Pergunte-me qualquer coisa...

Now running the program for more ordered pairs that gives primes the result is :

```
orderedPairs = {{12, 5}, {20, 13}, {26, 19}, {30, 23}, {42, 35}, {44, 37}, {56, 49}, {86, 79}, {102, 95}, {104, 97}, {110, 103}, {132, 125}, {146, 139}, {152, 145}, {162, 155}, {174, 167}, {180, 173}, {182, 175}, {186, 179}, {194, 187}, {204, 197}, {210, 203}, {216, 209}, {240, 233}, {254, 247}, {260, 253}, {264, 257}, {272, 265}, {284, 277}, {302, 295}, {312, 305}, {314, 307}, {324, 317}, {326, 319}, {330, 323}, {336, 329}, {356, 349}, {362, 355}, {366, 359}, {380, 373}, {384, 377}};
```

(Extract the first and second elements of the pairs)

```
firstElements = orderedPairs[[All, 1]];
```

```
secondElements = orderedPairs[[All, 2]];
```

(Calculate the differences and check for primes)

```
differences = firstElements + secondElements;
```

```
isPrime = PrimeQ /@ differences;
```

(Generate the next odd numbers based on the second elements)

```
nextOddNumbers = secondElements + 2 Range[Length[secondElements]]
```

(Check the sums and find the primes)

```
primeSums = Select[Differences, PrimeQ]
```

(Conjecture: Consecutive sums of ordered pairs minus consecutive sums of odd numbers gives multiples of 7)

```
consecutiveSums = Accumulate[firstElements] - Accumulate[nextOddNumbers]
```

```
{5,8,9,8,5,0,-7,-16,-27,-40,-55,-72,-91,-112,-135,-160,-187,-216,-247,-280,-315,-352,-391,-432,-475,-520,-567,-616,-667,-720,-775,-832,-891,-952,-1015,-1080,-1147,-1216,-1287,-1360,-1435}
```

A perfect match so that means PRIME NUMBERS DO HAVE A PATTERN !!!
