

Supplemental Material S6. Participants' RT changes over blocks of administration.

	Preceding Block – Following	
Order	Block	Comparison
	RT Mean (SD) – RT Mean (SD)	
Directed-attention Task		
Block order 1	Global – Local 1.13 (0.66) – 1.39 (0.98)	t (4292) = -0.33, p < .001***, SE = 0.03
Block order 2	Local – Global 1.82 (1.11) – 1.22 (0.63)	t (4291) = 0.68, p < .001***, SE = 0.03
Divided-attention Task		
Block order 1	Rising – Falling 1.25 (0.73) – 1.13 (0.66)	t (2705) = 2.59, p = .06, SE = 0.06
Block order 2	Falling – Rising 1.48 (0.81) – 1.39 (0.78)	t (2705) = 2.26, p = .14, SE = 0.05

Note. Only RT values from correct trials were included in the statistical analyses. $*p < .05$; $**p < .01$; $***p < .001$; $^{\dagger}p < .1$.
