

Supporting Figure SF7 (figshare) – Gradual decrease of rpS6 phosphorylation from the outside to the inner core of DLD-1 spheroids. DLD-1 colon cancer cells were grown in 2D and 3D conditions for 24h and treated with DMSO, Rapamycin, Torin1, PF4708671, MK2206 and AZD6244 for another 24h. Representative images of p-rpS6 S240/244 immunohistochemistry staining (chromogen: diaminobenzidine, brown) of DLD-1 cells cultured on filter membranes and as spheroids (cross sections, 5 μ m). Scale bars: 20 μ m.
