

**Fig. C1:** Maps showing counts of projected species for the 1961-1990 period and for the B1 and A2 scenarios for the 2080s period for **(a)** all species, as well as species identified as seasonally important for bears in **(b)** the spring, **(c)** the summer, and **(d)** the autumn. Areas of unsuitable range (agriculture, rock, ice, water, etc.) are masked in white. Present-day grizzly bear habitat in the southern Canadian Rockies is shown as a red outline.
