

Supplementary Figure S3. Wild type and mutant Cdc25A proteins show similar intracellular localization upon transfection in Hela cells. Cells were transfected with plasmids encoding either wild-type Cdc25A or the S283A mutant. After 24 h of transfection, cells were fixed and analyzed by immunofluorescence with an anti-Cdc25A antibody. Image analyses were performed using an ArrayscanTM (ThermoFisher) high content analysis reader. At least two hundred cells were counted in each case.
