

Supplementary Figure S7. Cell cycle analysis of H1299 tetracycline inducible cell pools after release from thymidine block. H1299 tetracycline inducible cell pools were synchronized at the G1/S boundary by serum deprivation followed by thymidine block. Cells were released from the block in presence of 1 μ g/ml doxycycline and collected at the indicated times for analysis by flow cytometry. thy: cells synchronized in G1/S upon treatment with thymidine. A representative experiments is presented.
