

Supplementary Fig S8 . Mitosis duration is identical in H1299 cells overexpressing wild type Cdc25A or its mutant form on serine 283. Exponentially growing H1299 tetracycline inducible cell pools were incubated for 24h in the presence of 1 μ g/ml of doxycycline. Following treatment, cells were collected and the proportion of phospho-histone H3 positive cells in cells overexpressing Cdc25A was determined by flow cytometry analysis. For each experiment, the percentage of phospho-histone H3 positive cells in the cell population overexpressing wild type Cdc25A was arbitrarily set to 1. Graphs represent mean value of four independent experiments with s.e.m. indicated.
