

S5 Fig. Comparison of quitters at week 0 to week 12

The observed OTUs (A) and Shannon index (B) of the quitters at week 0 and week 12. When comparing the observed OTU at week 0 to week 12 there is no significant difference (A) ($p = 0.08$, paired t-test). Similarly, when comparing the Shannon index at week 0 to week 12 there is no significant difference (B) ($p = 0.38$, paired t-test). The solid crossbars mark the mean of the distributions.
