

Suppl. Fig. 2. Immunohistochemical podoplanin expression with increasing percentage of positively stained tumour cells. The figure shows 4 different primary cSCC (200 μ m) with immunohistochemical staining of podoplanin and an increasing percentage of positively stained tumour cells varying between <25% (**a**), 26–50% (**b**), 51–75% (**c**), and >75% (**d**).
