## Demo: SeedMe.org - Share data and visualization

Amit Chourasia\*, Mona Wong, Dmitry Mishin David R. Nadeau and Michael L. Norman San Diego Supercomputer Center, University of California, San Diego \* email: amit@sdsc.edu

Most scientific computation and analyses create important transient data and preliminary results. Quick and effective access and assessments of this data is necessary for efficient use of researchers time and computation resources, but this process is complicated when a large collaborating team is geographically dispersed and/or some team members do not have direct access to the computation resource and output data. Current methods for sharing and assessing transient data and preliminary results are cumbersome, labor intensive, and largely unsupported by useful tools and procedures. Each research team is forced to create their own ad hoc procedures to push results from system to system, and user to user, to guide the next step in their research.

This demonstration will introduce attendees to the SeedMe platform, which provides a web-based cyberinfrastructure to enable easy sharing and streaming of transient data and preliminary results directly from computing resources to a variety of platforms, from mobile devices to workstations. The SeedMe platform is open to all researchers and provides web browser based as well scriptable tools for easy integration with ad hoc computation workflows.

The demonstration will include

- 1. Single sign-on with CILogon
- 2. Web Browser interaction

Showcase organization, navigation and usage via web browser for editing, uploading data, commenting, sharing and notifying

3. Command line interaction

Show how to easily interact with command line tool

4. Video encoding

Show how to create and share video from a set of images

5. Scientific apps

Show scientific applications that have SeedMe integration

Presented at Gateways 2016, San Diego Supercomputer Center, La Jolla, CA, November 2-3, 2016. https://gateways2016.figshare.com/
