Journal of Computational Biology

From Wikipedia, the free encyclopedia

The **Journal of Computational Biology** is a monthly [peer-reviewed scientific journal](#) covering [computational biology](#) and [bioinformatics](#). It was established in 1994 and is published by [Mary Ann Liebert, Inc.](#) The [editors-in-chief](#) are [Sorin Istrail](#) ([Brown University](#)) and [Michael S. Waterman](#) ([University of Southern California](#)). According to the *Journal Citation Reports*, the journal has a 2012 [impact factor](#) of 1.564.^[1]

Randomized Phase III Trial of Retinoic Acid and Arsenic Trioxide Versus Retinoic Acid and Chemotherapy in Patients With Acute Promyelocytic Leukemia: Health-Related Quality-of-Life Outcomes

Fabio Efficace, Franco Mandelli, Giuseppe Avvisati, Francesco Cottone, Felicetto Ferrara, Eros Di Bona, Giordina Specchia, Massimo Breccia, Alessandro Levis, Simona Sica, Olimpia Finizio, Maria Grazia Kropp, Giuseppe Fioritoni, Elisa Cerqui, Marco Vignetti, Sergio Amadori, Richard F. Schlenk, Uwe Platzbecker, and Francesco Lo-Coco

ABSTRACT

Purpose

A randomized clinical trial compared efficacy and toxicity of standard all-*trans*-retinoic acid (ATRA) plus chemotherapy versus ATRA plus arsenic trioxide in patients with newly diagnosed, low- or intermediate-risk acute promyelocytic leukemia (APL). Here, we report health-related quality-of-life (HRQOL) results.

Patients and Methods

HRQOL was a secondary end point of this trial. The European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire–Core 30 was used to assess HRQOL at end of induction and after consolidation therapy. All analyses were based on 156 patients who received at least one dose of treatment, with groups defined according to randomly assigned treatment. Primary analysis was performed, estimating mean HRQOL score over time and differences between treatment arms using a linear mixed model.

A fresh look at Wikidata

SQID is a fast way to browse and query [Wikidata](#), the free knowledge base of Wikipedia. SQID is inspired by Magnus Manske's [Reasonator](#), but it has a different focus. In particular, information about Wikidata classes and properties is prominently shown, including derived statistics and query results that are not part of Wikidata. SQID wants to help editors to improve Wikidata.

Example pages:

- [Johann Sebastian Bach](#): classical example of a data-rich item page
- [volcano](#): Wikidata item that is used as a class
- [galaxy](#): Wikidata class item that is part of the rather well designed classification of astronomical objects
- [sex or gender](#): a frequently used Wikidata property
- [instrument](#): another interesting Wikidata property
- [Wikidata property](#): the class of all Wikidata properties; shows how properties are organised in subclasses

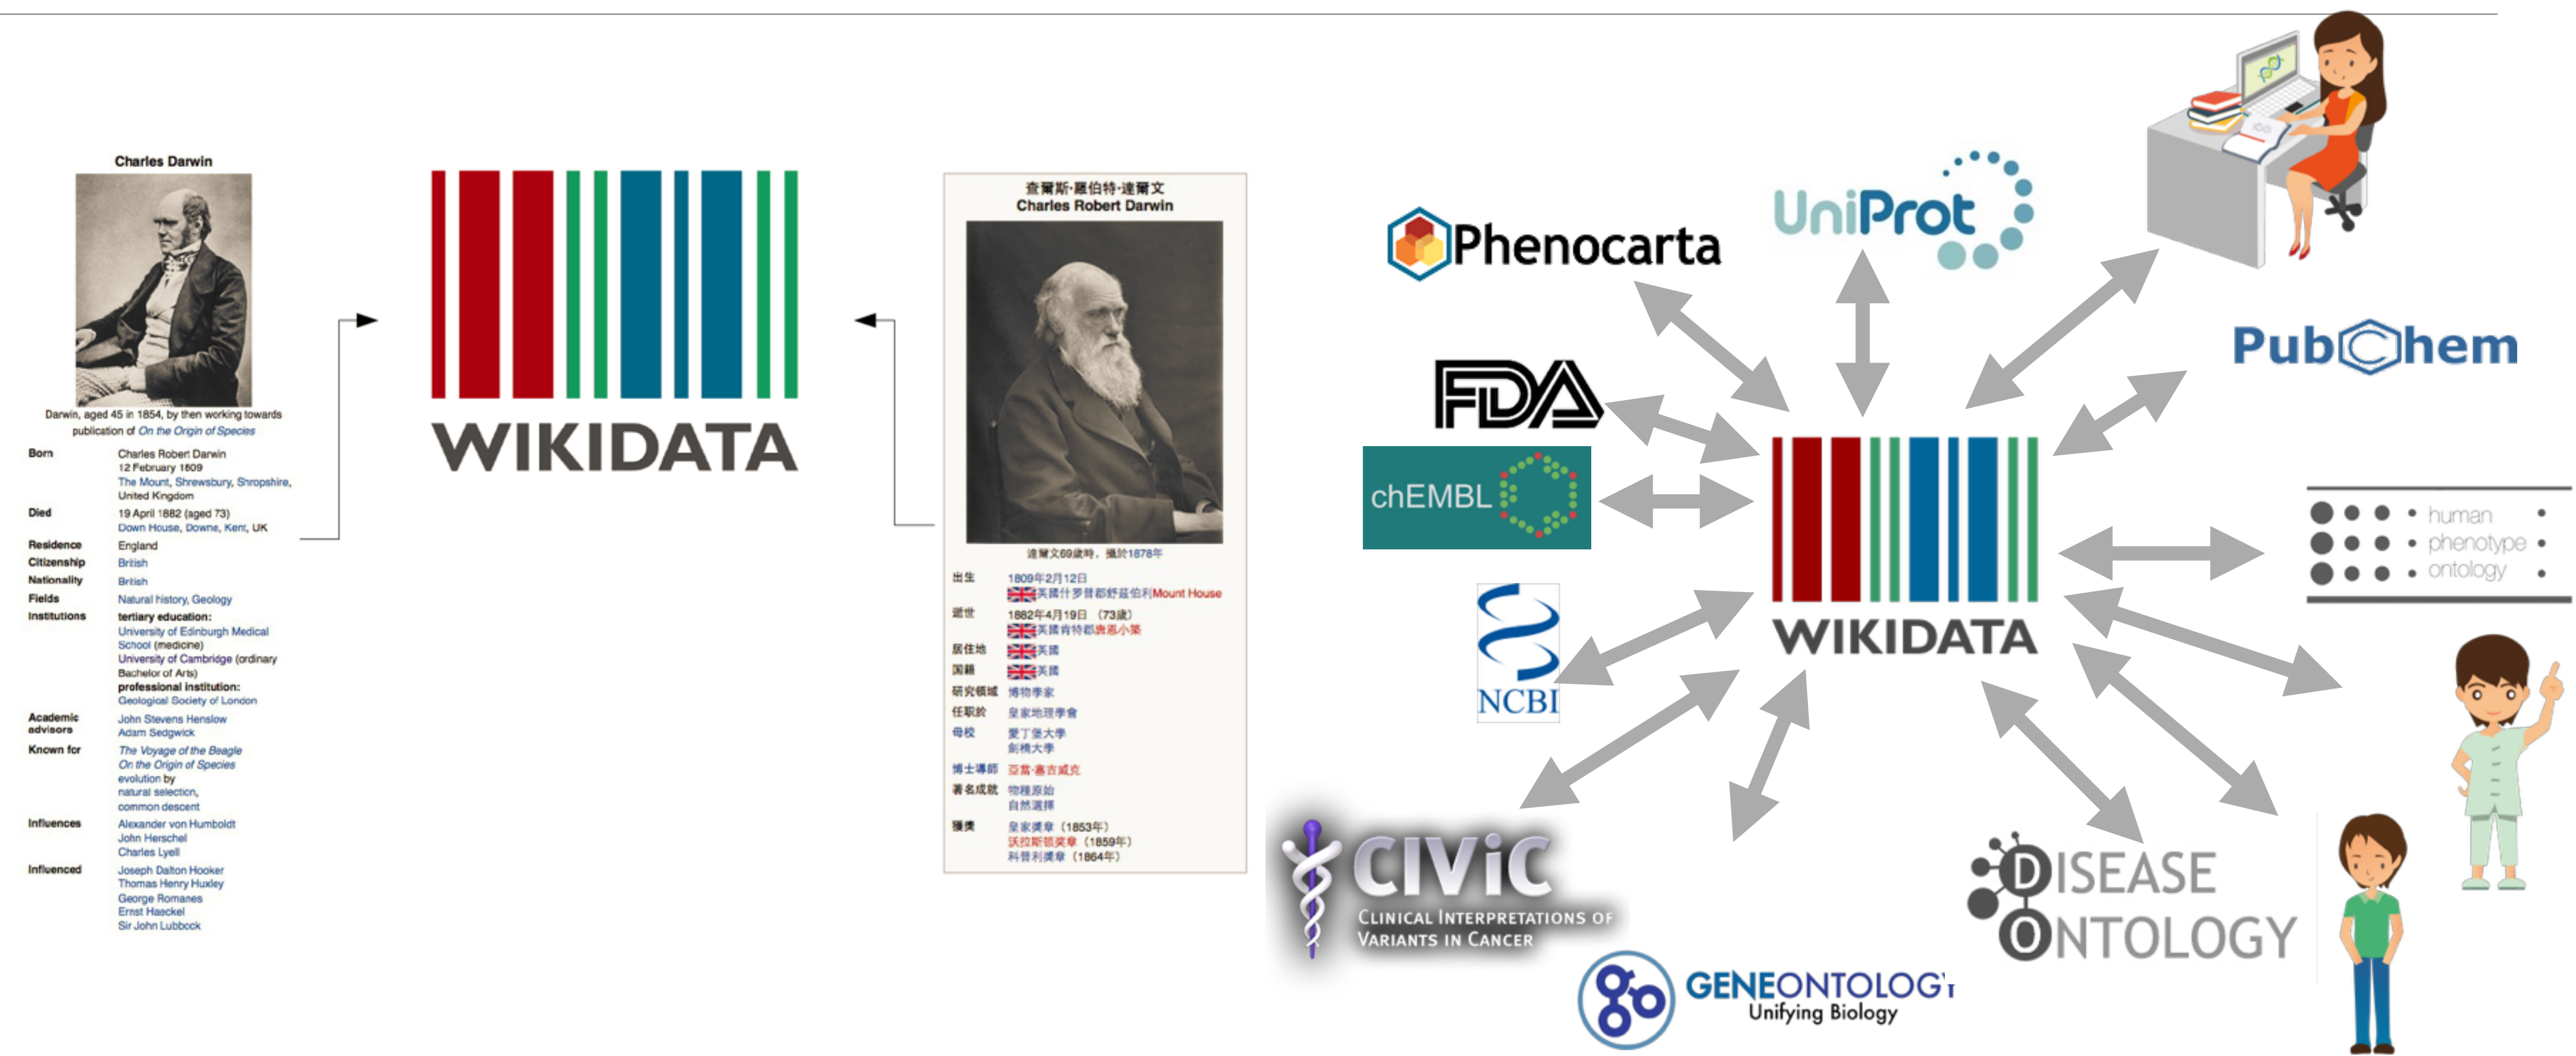

Properties are special Wikidata entities that are used for describing relationships between entities, and for assigning many types of data values to entities. You can find all properties in SQID's [property browser](#).

Classes are Wikidata items that are used as the value in an [instance-of](#) statement, or that are subject or value in a [subclass-of](#) statement. You can find all classes in SQID's [classes browser](#).

Most data shown by SQID is **live data** taken from the [Wikidata API](#) or the [Wikidata SPARQL query service](#). Complex statistics that cannot currently be computed live are pre-computed from the weekly data dumps using [Wikidata Toolkit](#). Some complex statistics can be fetched from SPARQL, but take too long to compute in the browser. These are updated every hour. See the [status page](#) for recency information and statistics on the current data.

Retinoic acid receptor alpha

From Wikipedia, the free encyclopedia

Retinoic acid receptor alpha (RAR-α), also known as NR1B1 (nuclear receptor subfamily 1, group B, member 1) is a nuclear receptor that in humans is encoded by the RARA gene.^{[4][5]}

Contents

[hide]

Function

[edit]

Retinoid signaling is transduced by 2 families of nuclear receptors, retinoic acid receptor (RAR) and retinoid X receptor (RXR), which form RXR/RAR heterodimers. In the absence of ligand, DNA-bound RXR/RARA represses transcription by recruiting the corepressors NCOR1, SMRT (NCOR2), and histone deacetylase. When ligand binds to the complex, it induces a conformational change allowing the recruitment of coactivators, histone acetyltransferases, and the basic transcription machinery.^[6]

10 stappen om data publiek toegankelijk te maken in Wikidata

Data and Knowledge Production

Millions of raw sequence reads are produced for a patient tumor.

Sequences are aligned to the reference genome and tumor-specific events predicted.

Data are reviewed and validation experiments performed to identify high quality events.

Events are annotated and scored in an effort to predict events of functional significance.

CIViC Curation

Crowdsourced curation efforts, moderated by experts in oncology and bioinformatics, help to build a knowledge-base of clinical interpretations of variants in cancer, describing the therapeutic, prognostic, diagnostic, and predisposing relevance of inherited and somatic variants of all types. Anyone may sign up to be a curator, add evidence, suggest changes to records, and discuss ongoing curation efforts.

Add New Evidence

CIViC Add EVIDENCE ITEM

To add an evidence item, please complete the following form, provide a short statement supporting its inclusion into the CIViC database, then click the "Submit Evidence for Indication" button.

Please ensure that your submission contains no Protected Health Information, and is your own original work. By submitting evidence to CIViC you agree to release it to the public domain as described by the Creative Commons Public Domain Dedication (CC0 1.0 Universal).

Step 2: Be(come) FAIR & Notable

Notable items fulfil at least 1 of the following criteria:

1. It contains at least one valid sitelink to a page on Wikipedia (or its sister projects)
2. It can be described using serious and publicly available references
3. It fulfills some structural need

<https://www.force11.org/group/fairgroup>

<https://www.wikidata.org/wiki/Wikidata:Notability>

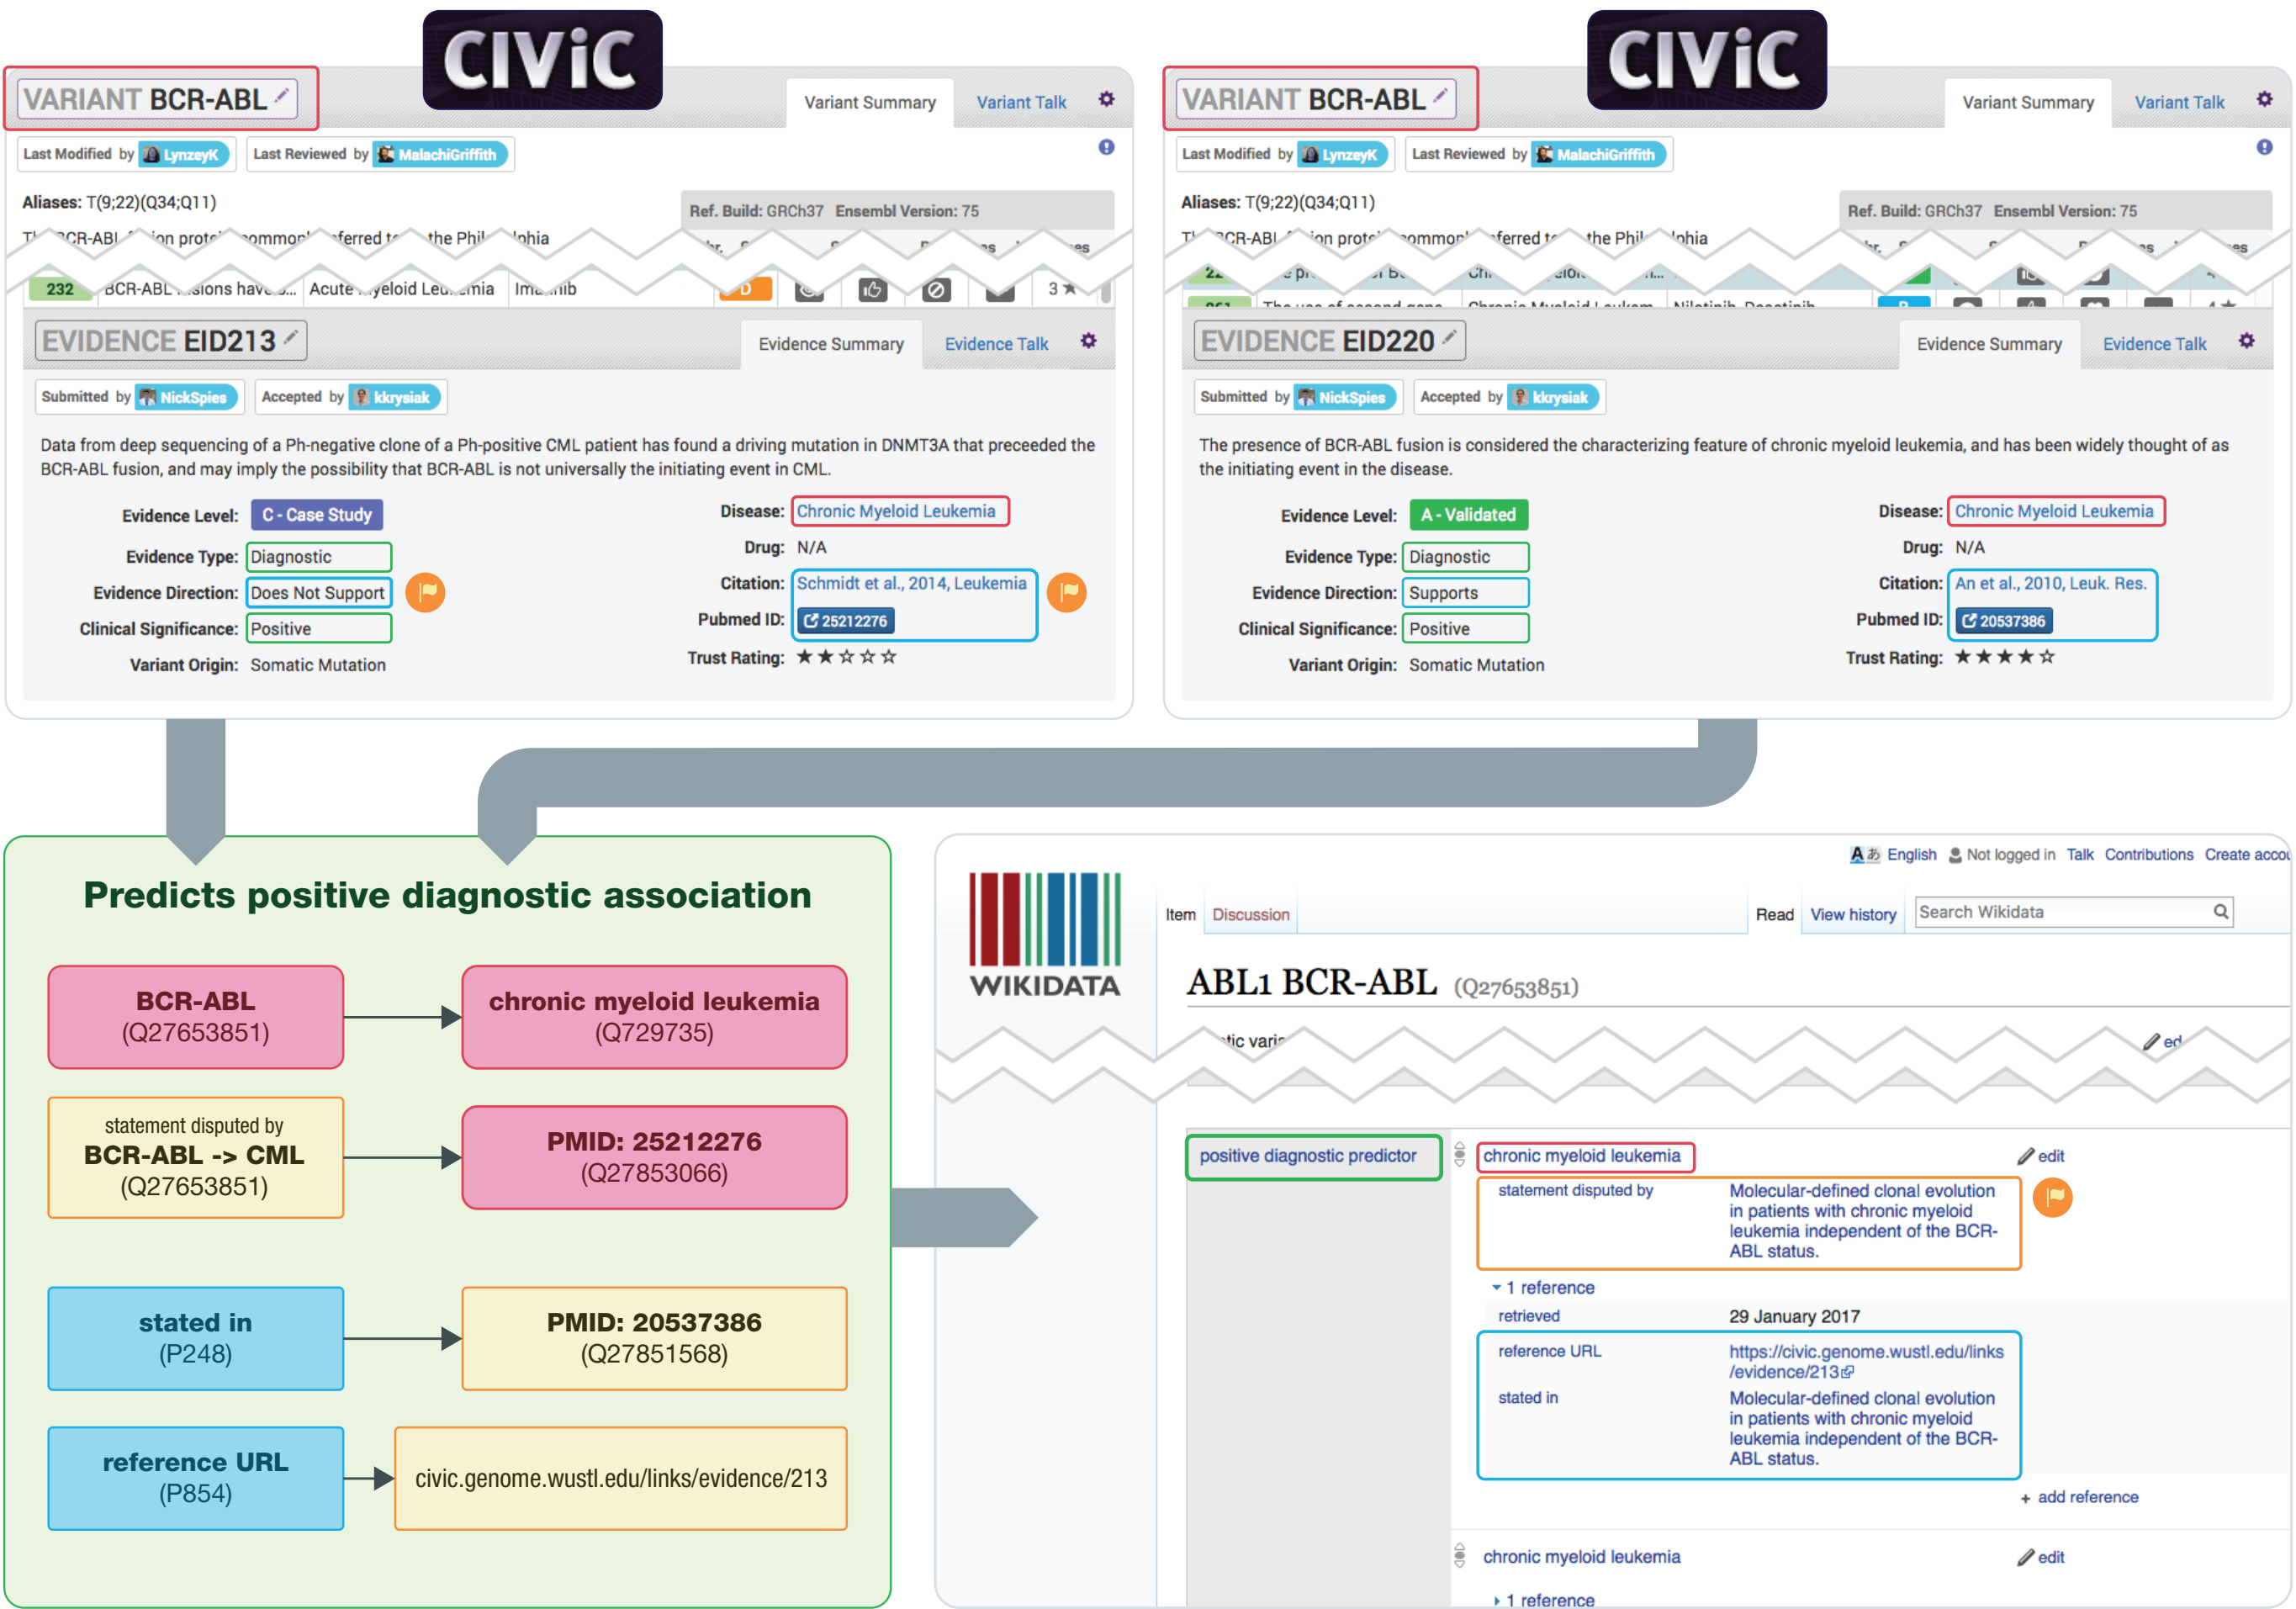

Step 3: Join Wikidata communities

Wikiprojects:

- https://www.wikidata.org/wiki/Wikidata:WikiProject_Molecular_biology
- https://www.wikidata.org/wiki/Wikidata:WikiProject_Medicine
- https://www.wikidata.org/wiki/Wikidata:WikiProject_Ontology

Step 4: Reach consensus on the underlying data model

New Wikidata properties:

- CIViC variant ID (P3329)
- HGVS nomenclature (P3331)
- positive therapeutic predictor (P3354)
- negative therapeutic predictor (P3355)
- positive diagnostic predicator (P3356)
- negative diagnostic predicator (P3357)
- positive prognostic predictor (P3358)
- negative prognostic predictor (P3359)
- biological variant of (P3433)

Step 5: Show evidence

{ } wikicite

WikiCite builds a bibliographic database in Wikidata to serve all Wikimedia projects. Citations can now be added::

- Source Metadata:

<https://tools.wmflabs.org/sourcemd/>

- PMIDTool:

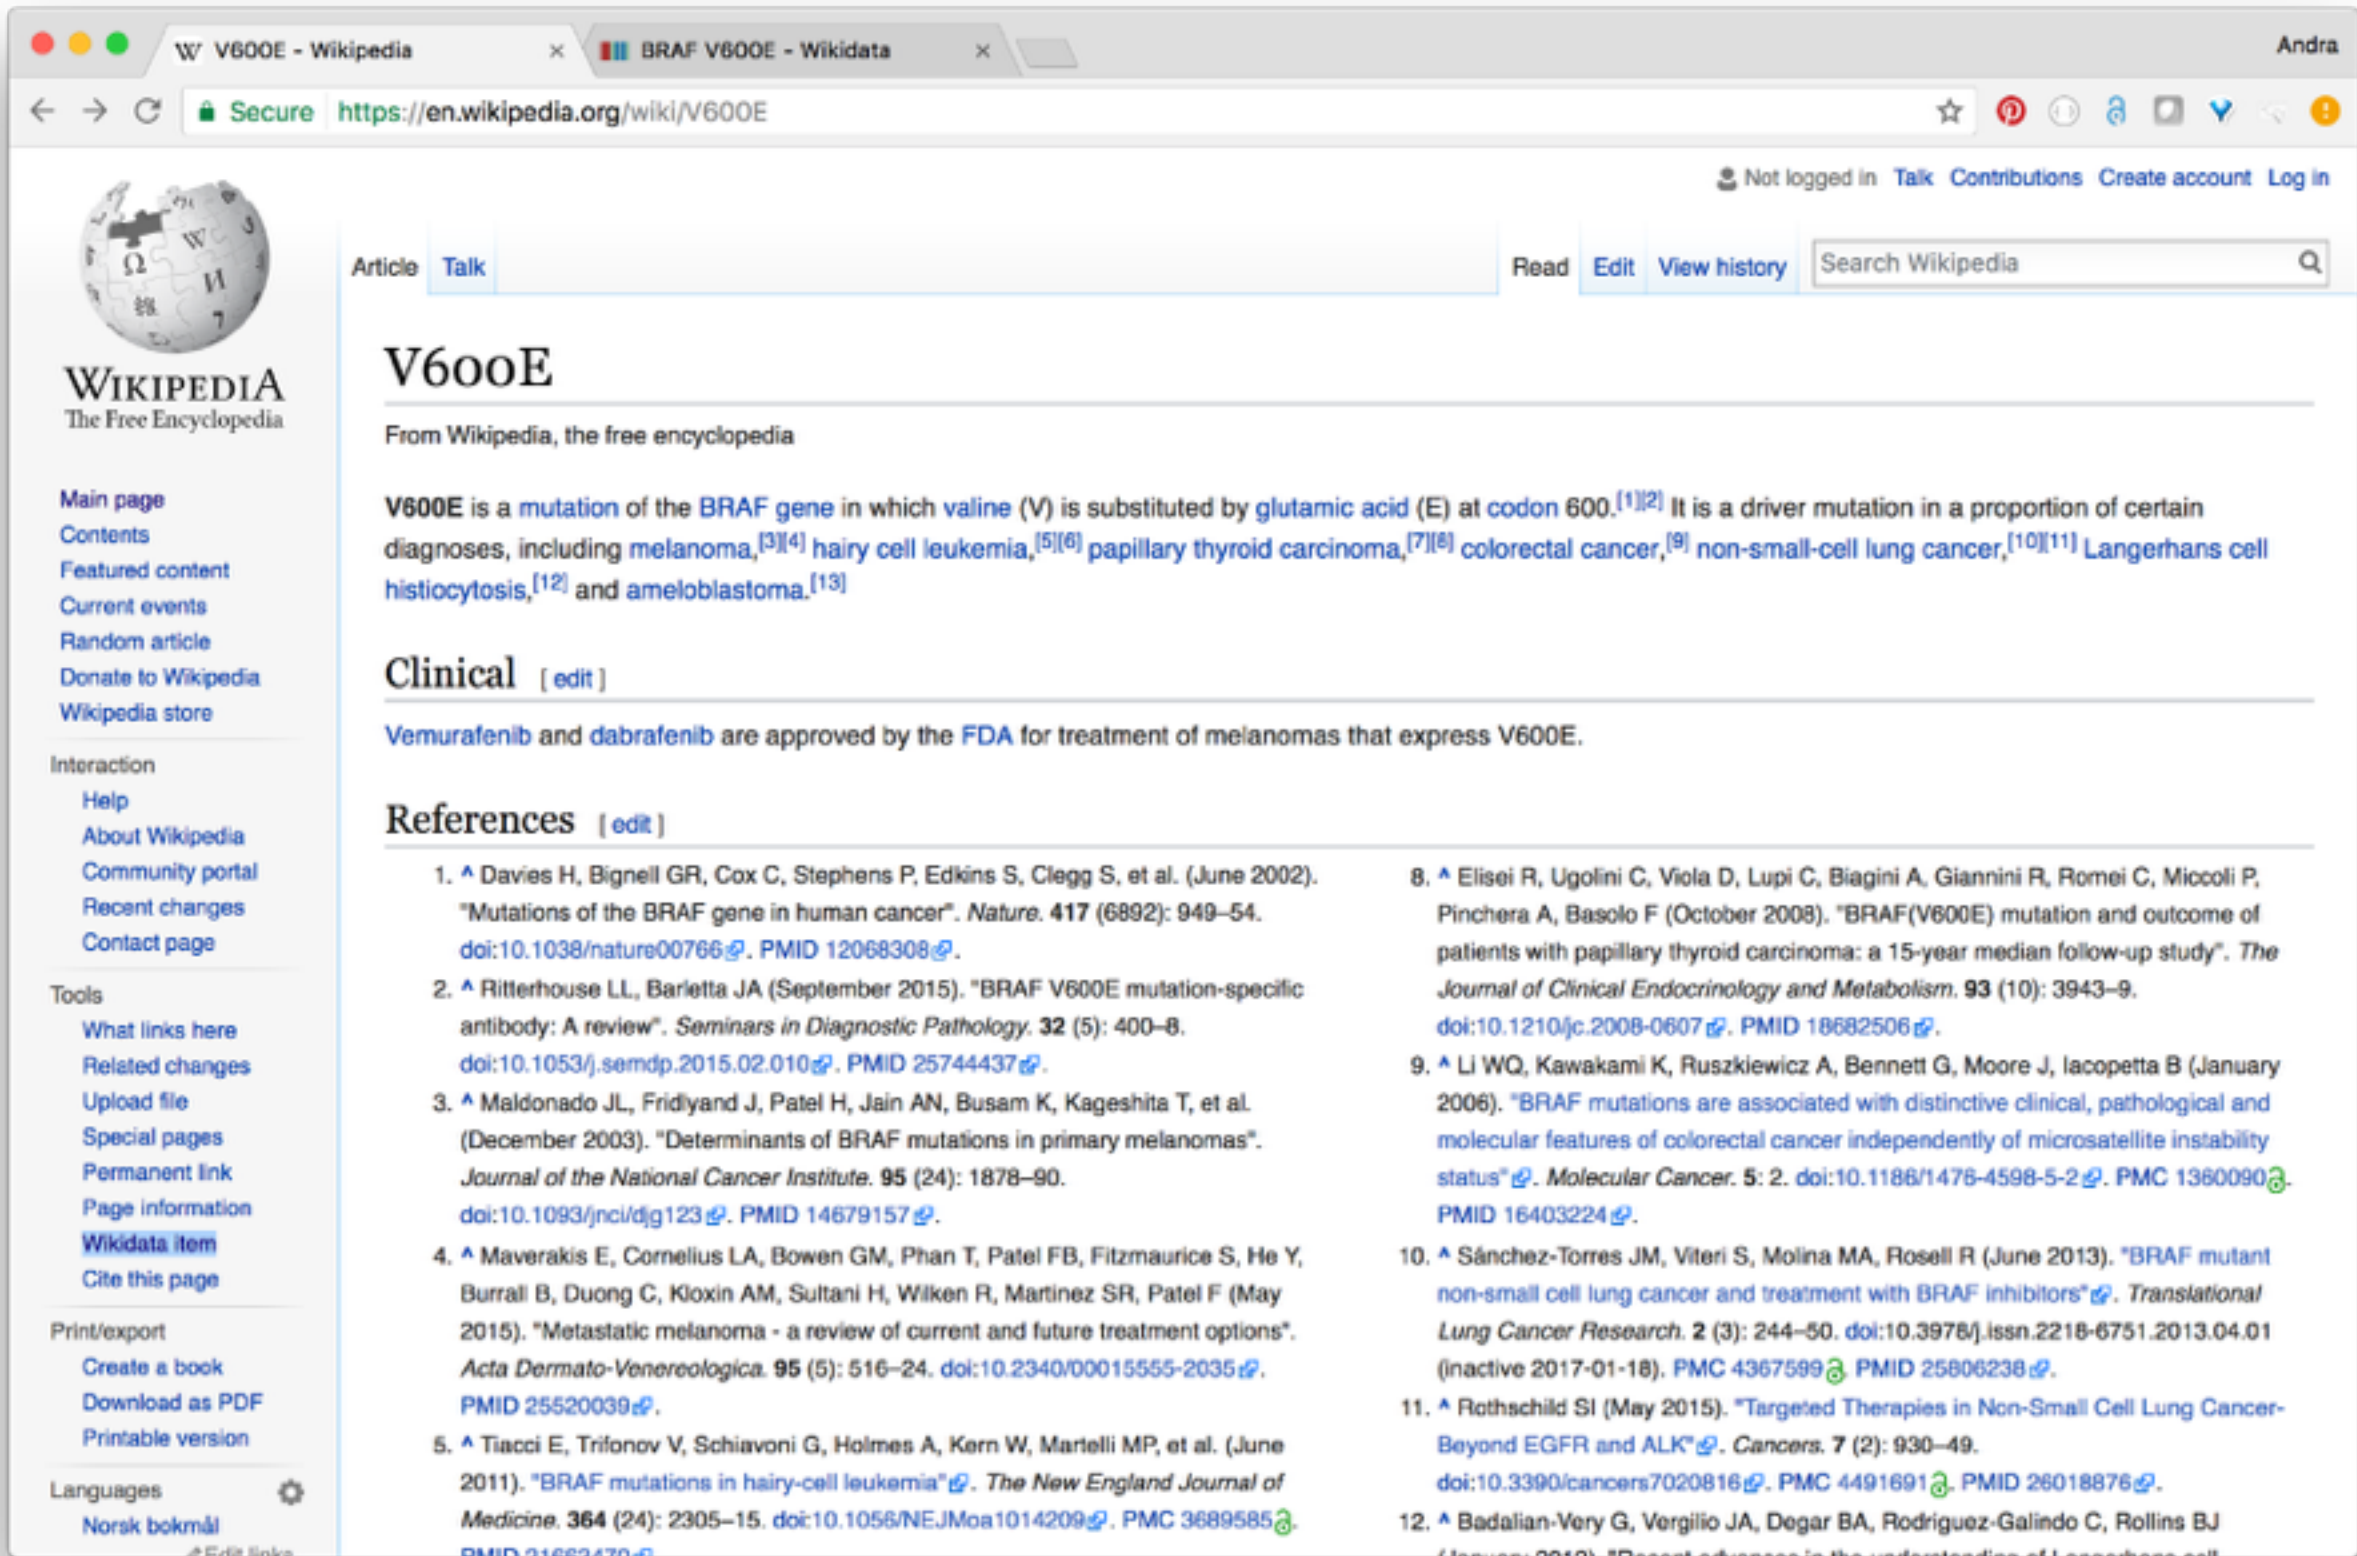

https://www.wikidata.org/wiki/Wikidata:WikiProject_Source_Metadata/PMIDTool

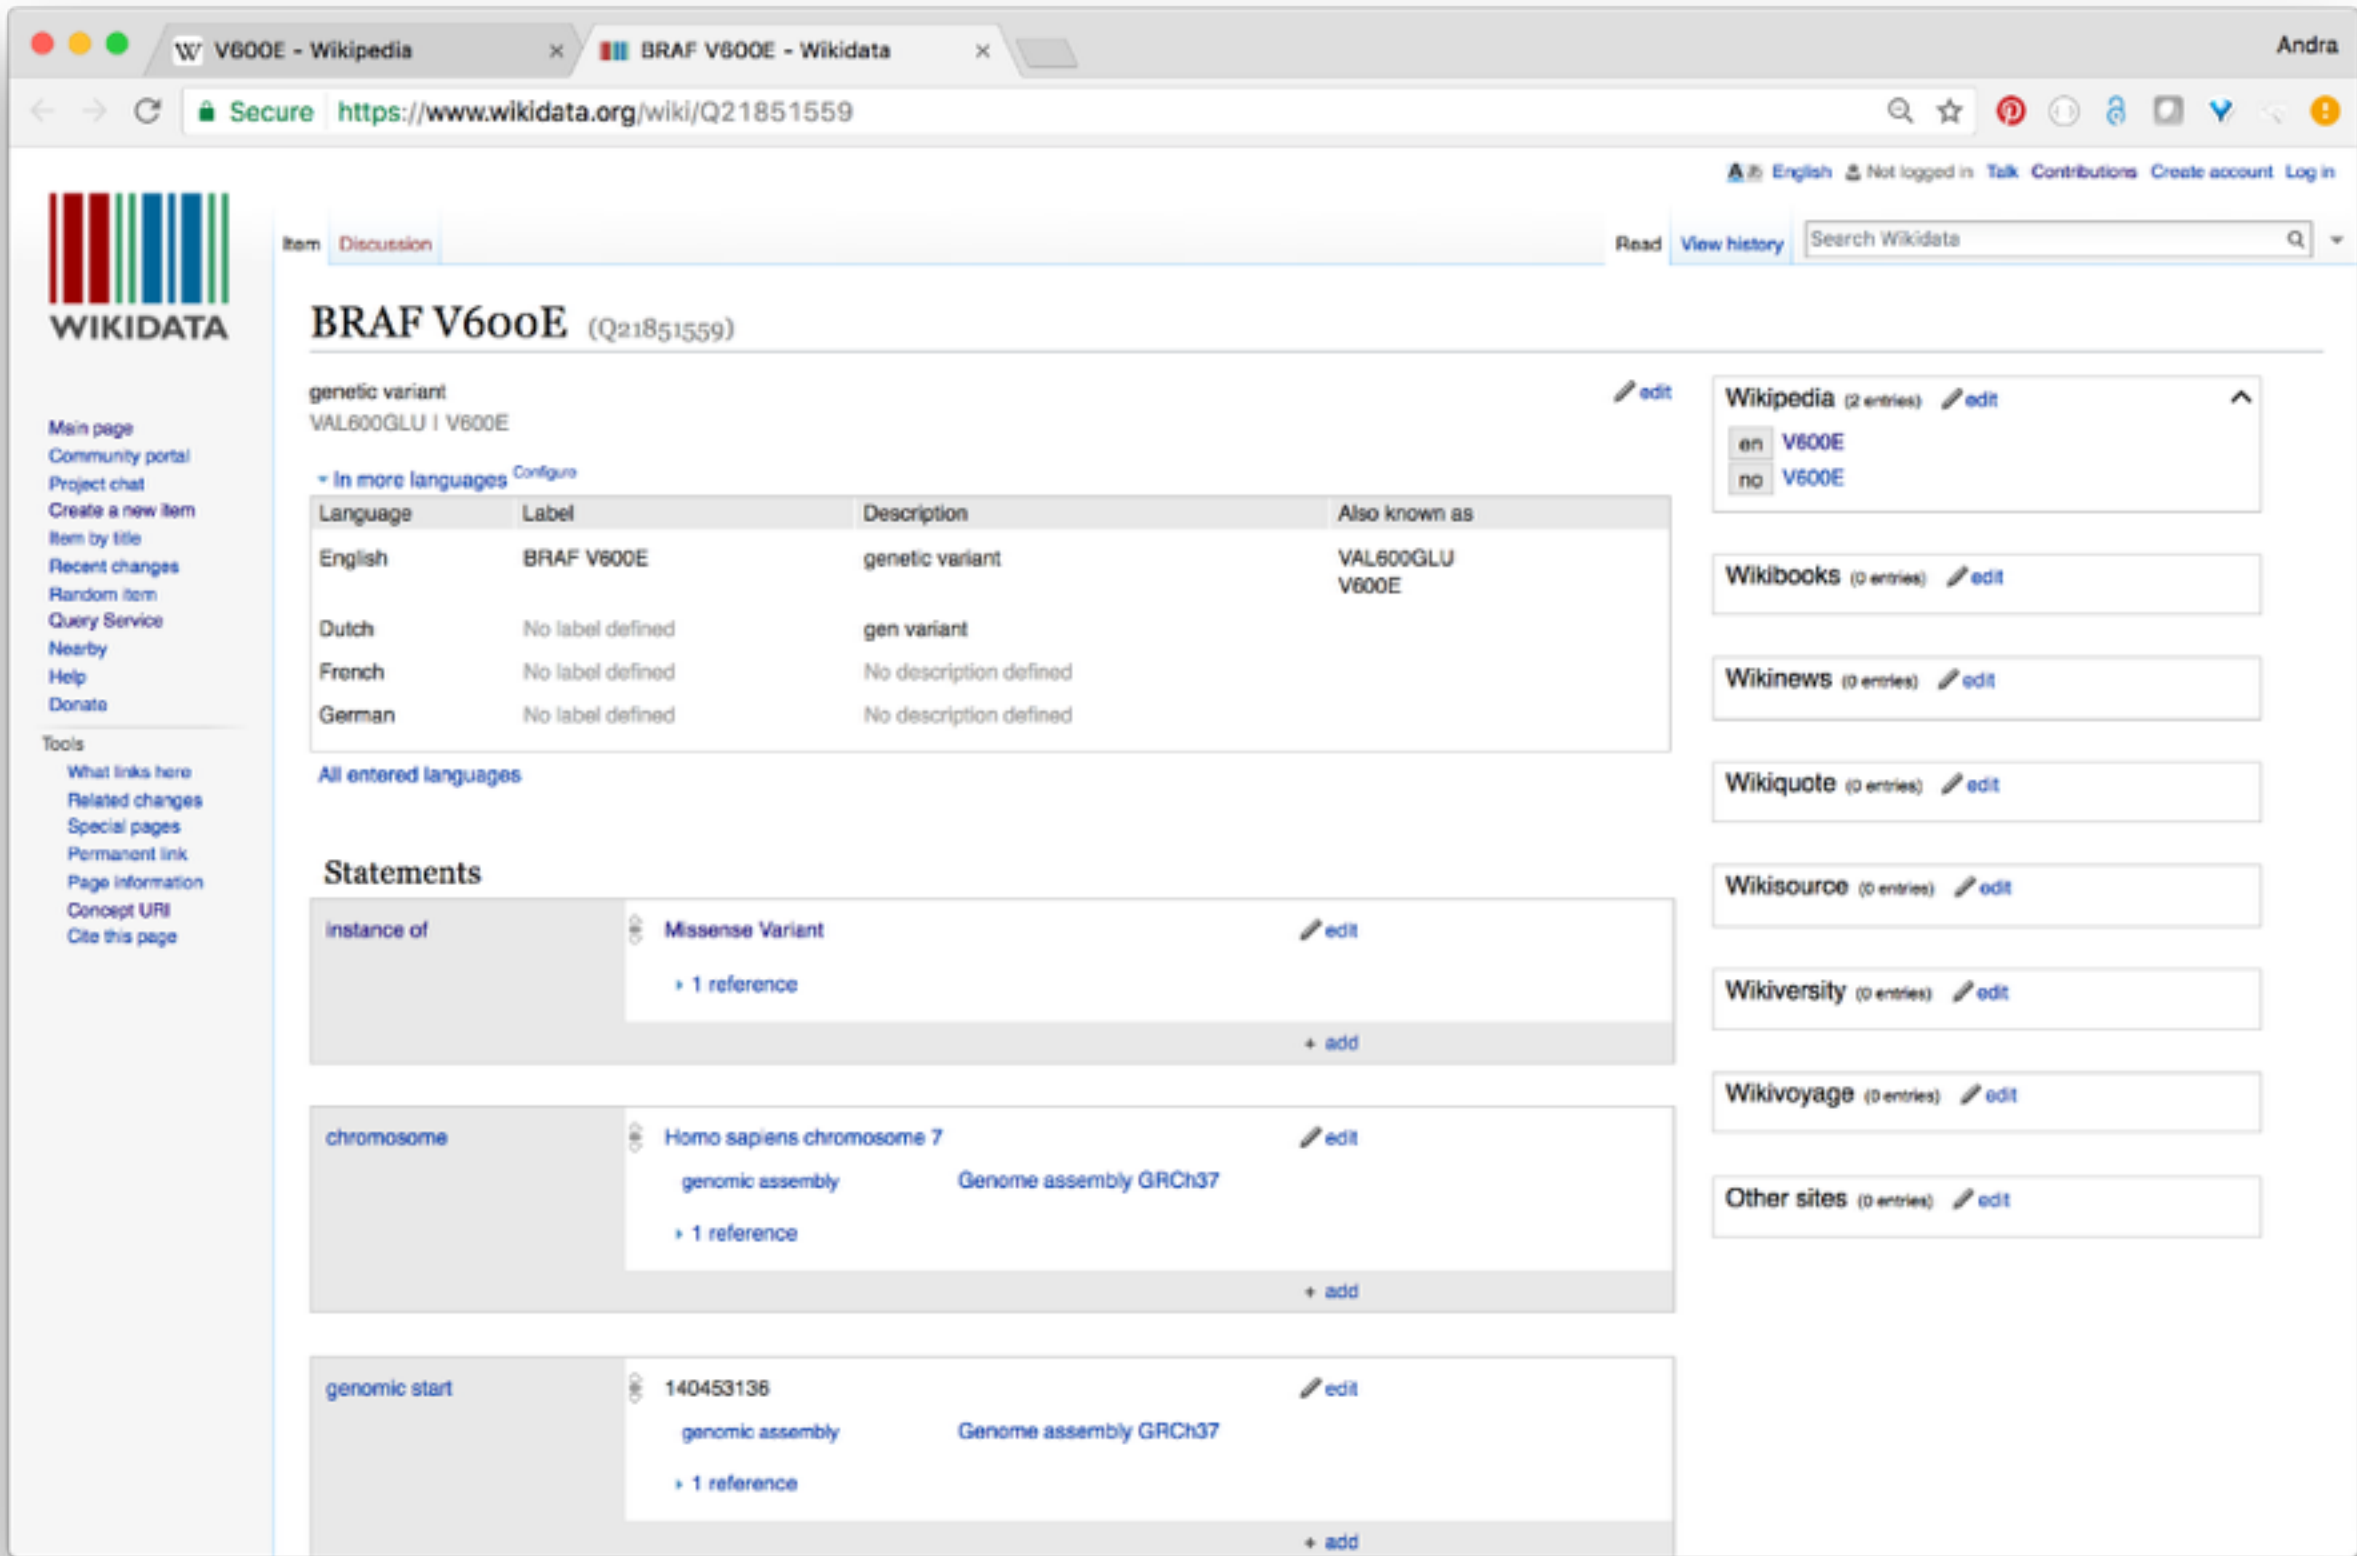

wikicite: <https://meta.wikimedia.org/wiki/WikiCite>

Evidence patterns: <https://www.wikidata.org/wiki/User:ProteinBoxBot/evidence>

Step 6: Create 1 or more canonical examples

<https://en.wikipedia.org/wiki/V600E>

<https://www.wikidata.org/wiki/Q21851559>

Step 7: Automate

Different automation platforms are available:

- Quickstatements, is tool which can batches of statements (with optional qualifiers and sources) to Wikidata items
- PMIDTool: Tool to add Pubmed entries to the wikicite publication database
- Wikidata Integrator: a python library for reading and writing to Wikidata/Wikibase.

Quickstatements:

http://tools.wmflabs.org/wikidata-todo/quick_statements.php

PMIDTool: https://www.wikidata.org/wiki/Wikidata:WikiProject_Source_MetaData/PMIDTool

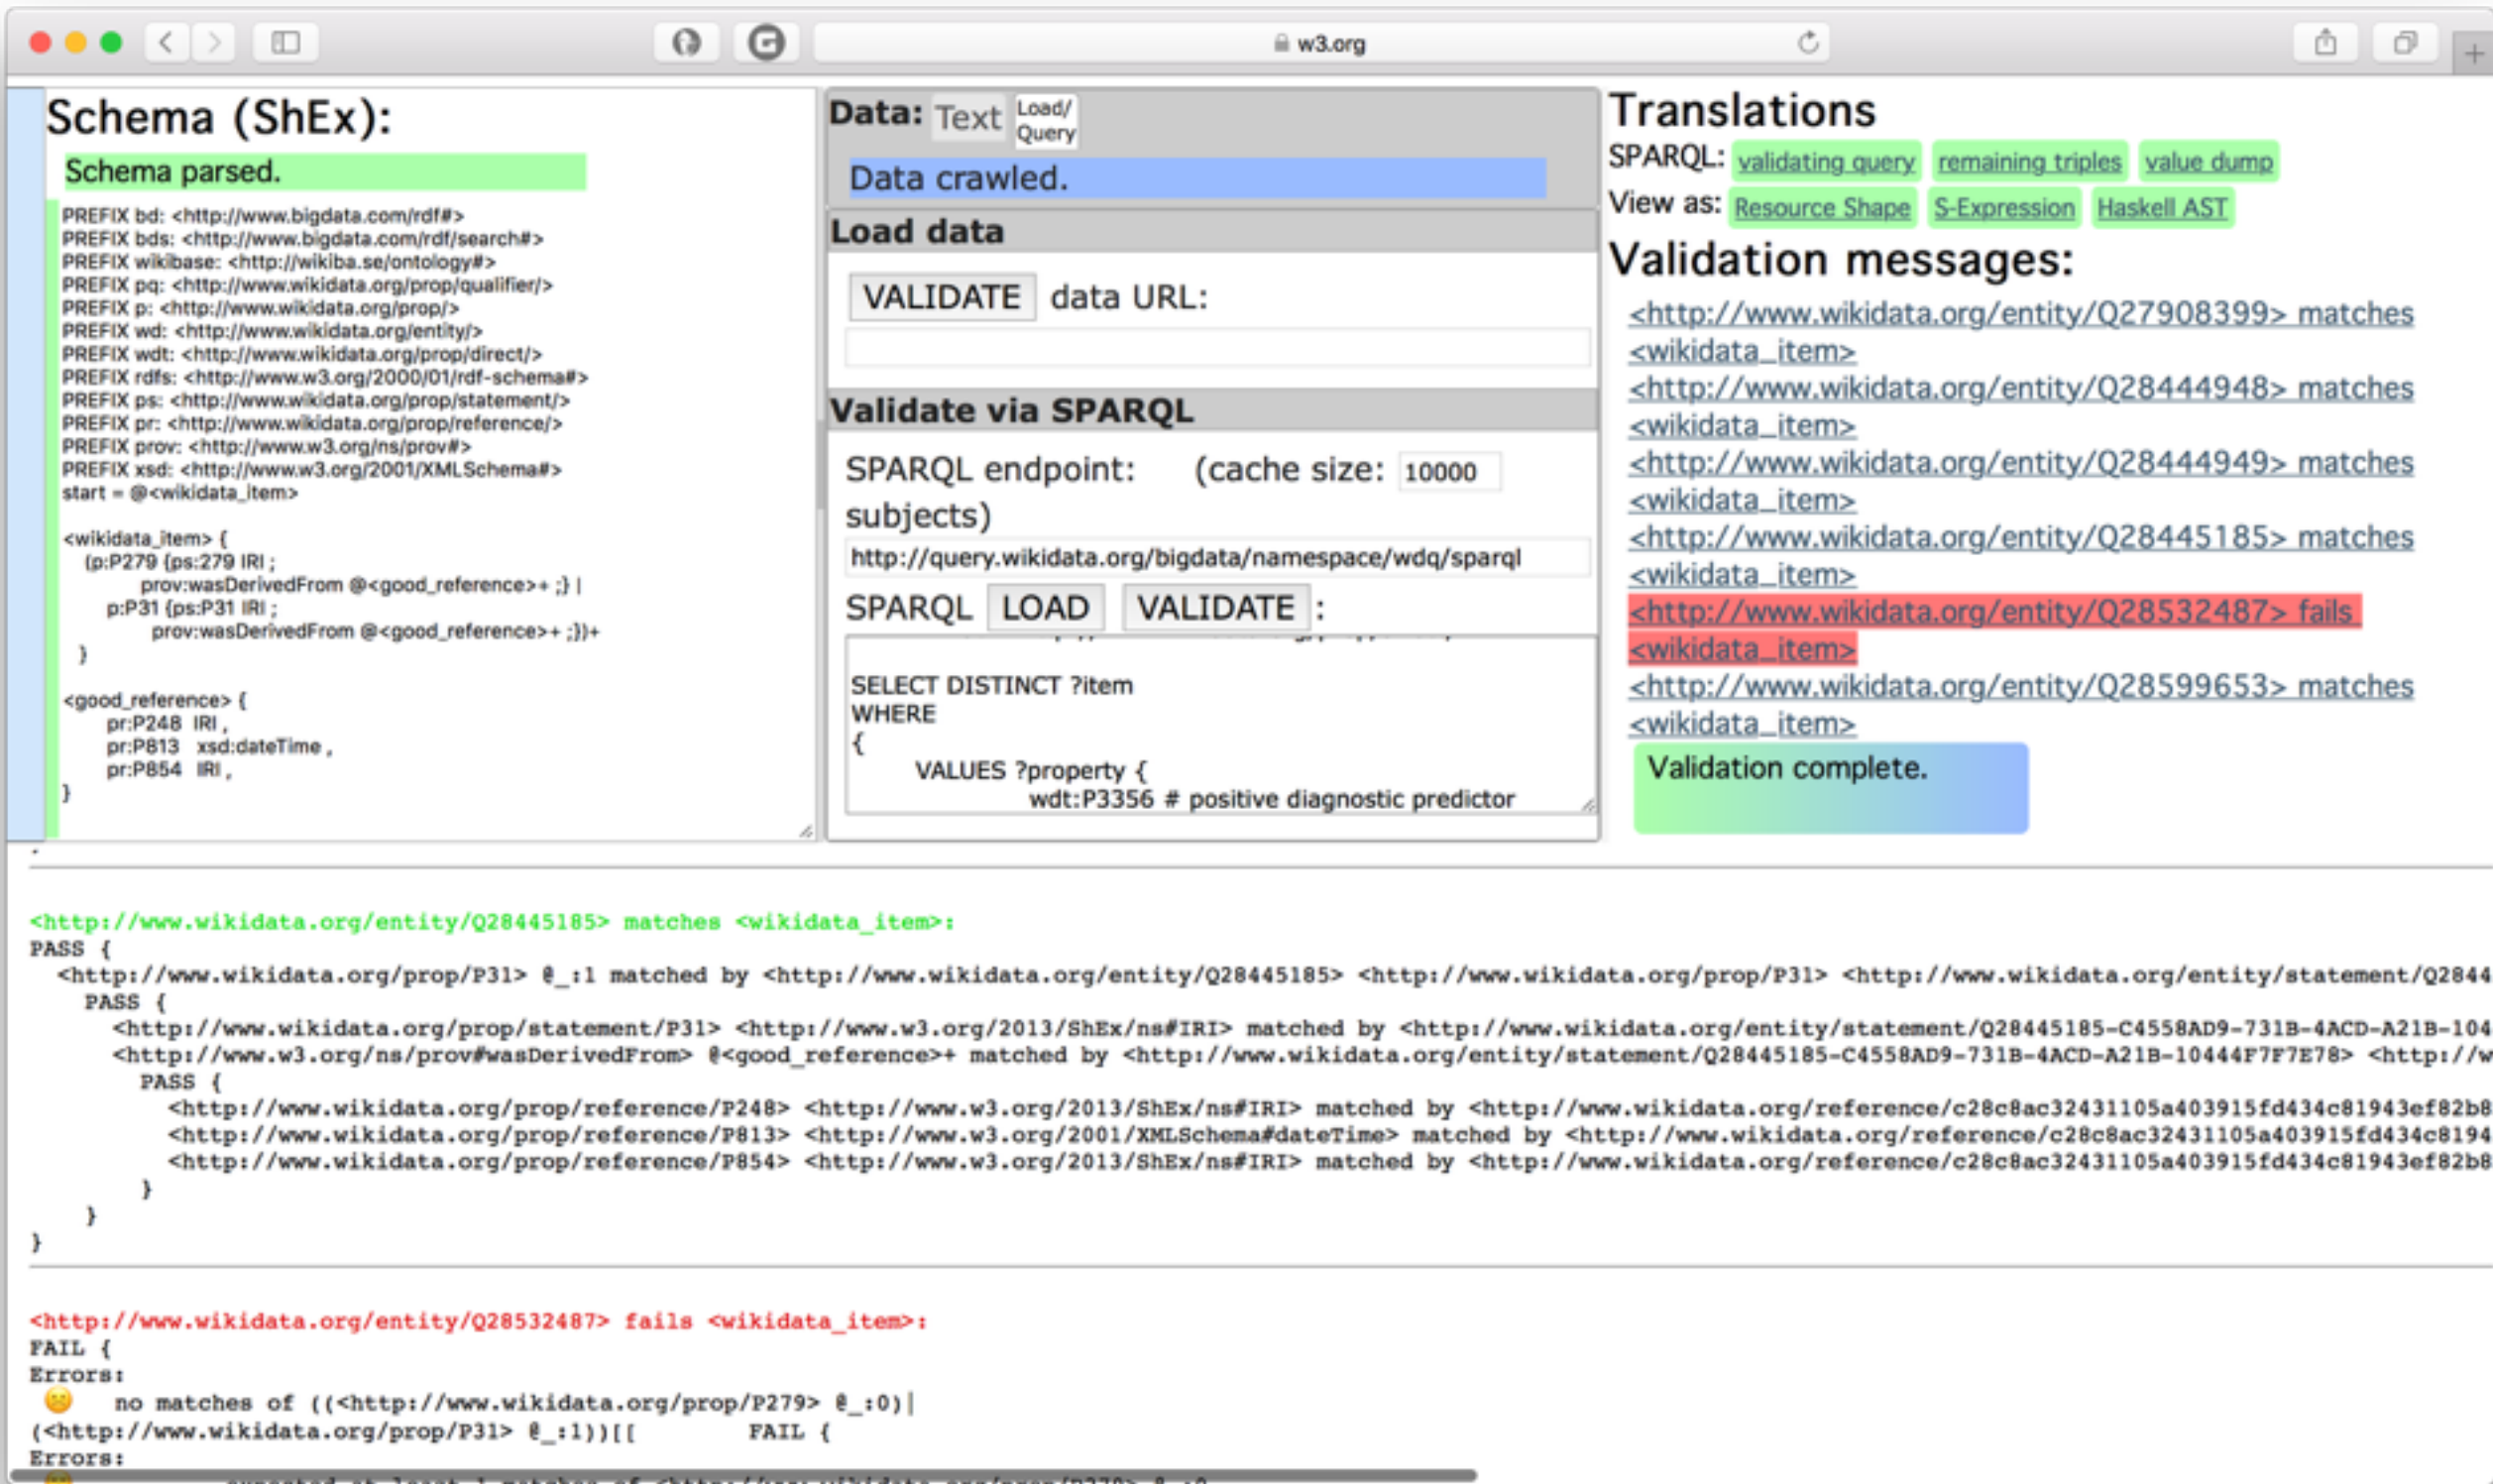

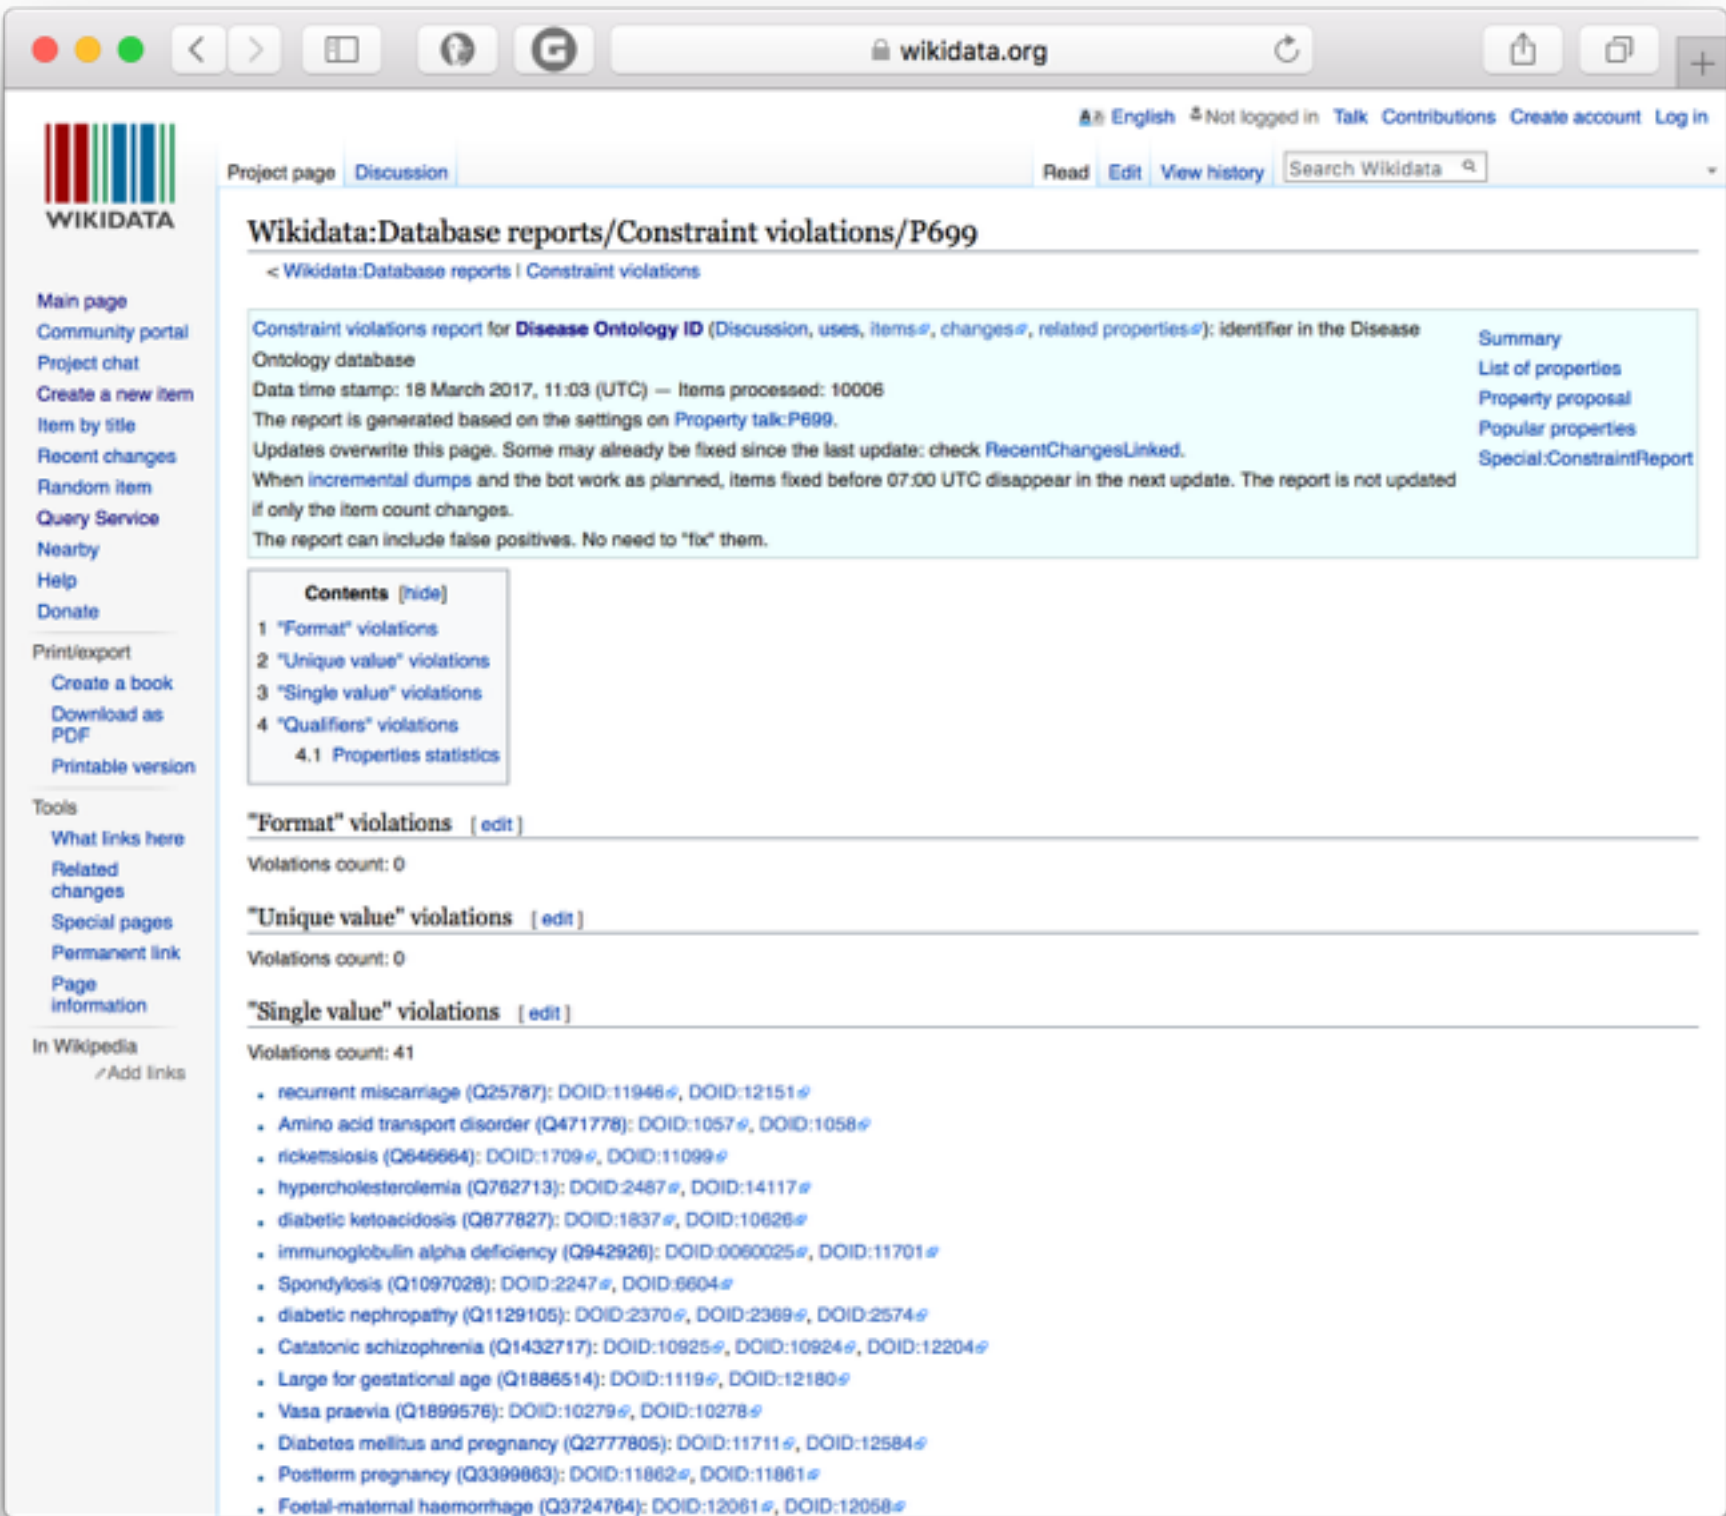

Wikidata Integrator: <https://github.com/SuLab/WikidataIntegrator>

Step 8: Validate

Constraint Violations

W3c Shape Expressions

Get example query

Analysis and visualization

WikidataQueryServiceR is an R wrapper for the Wikidata Query Service (WDQS), which allows extracting queries directly from the examples given in the WDQS. <https://cran.r-project.org/web/packages/WikidataQueryServiceR/README.html>

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

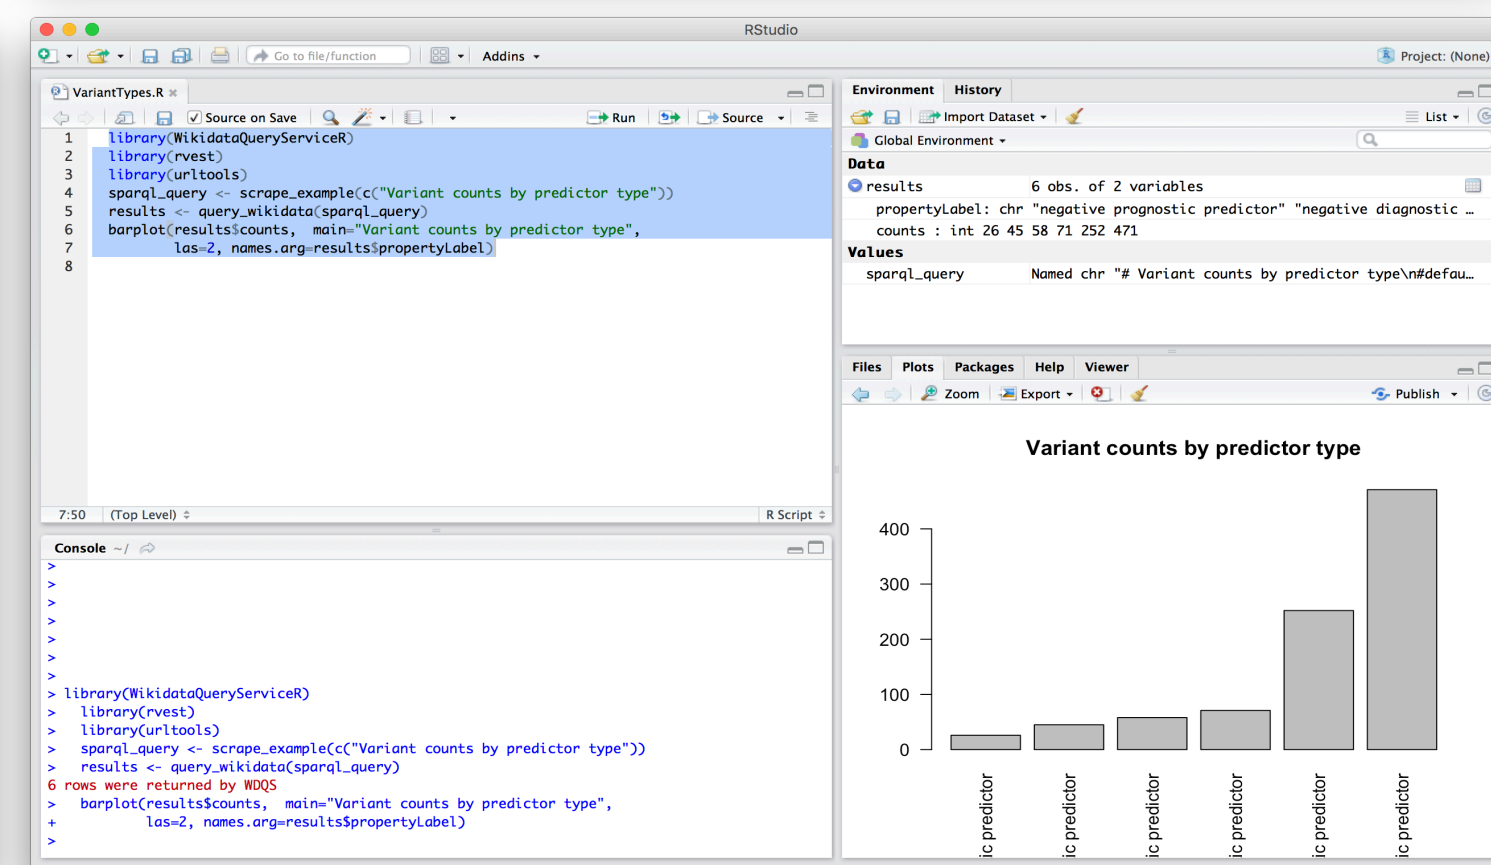

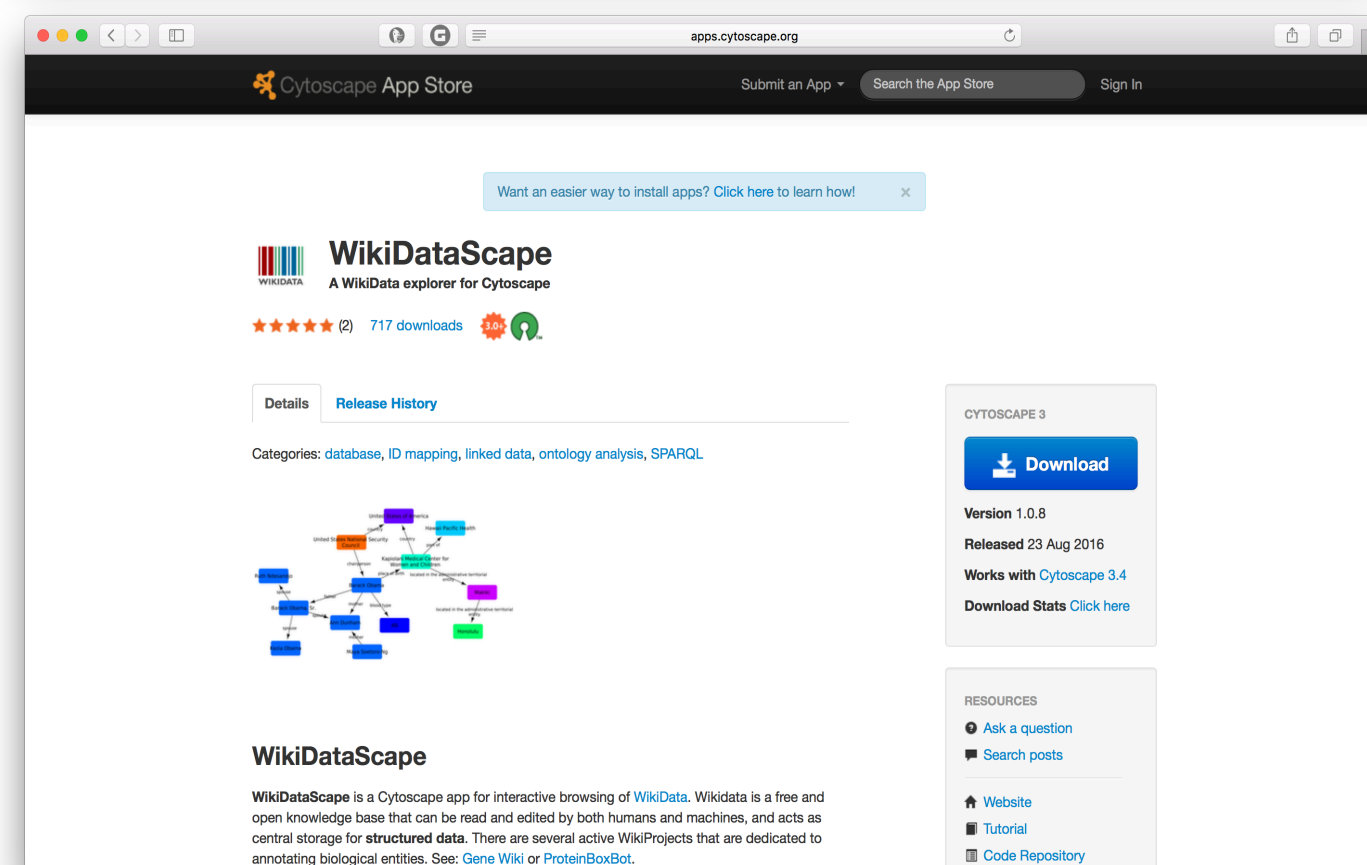

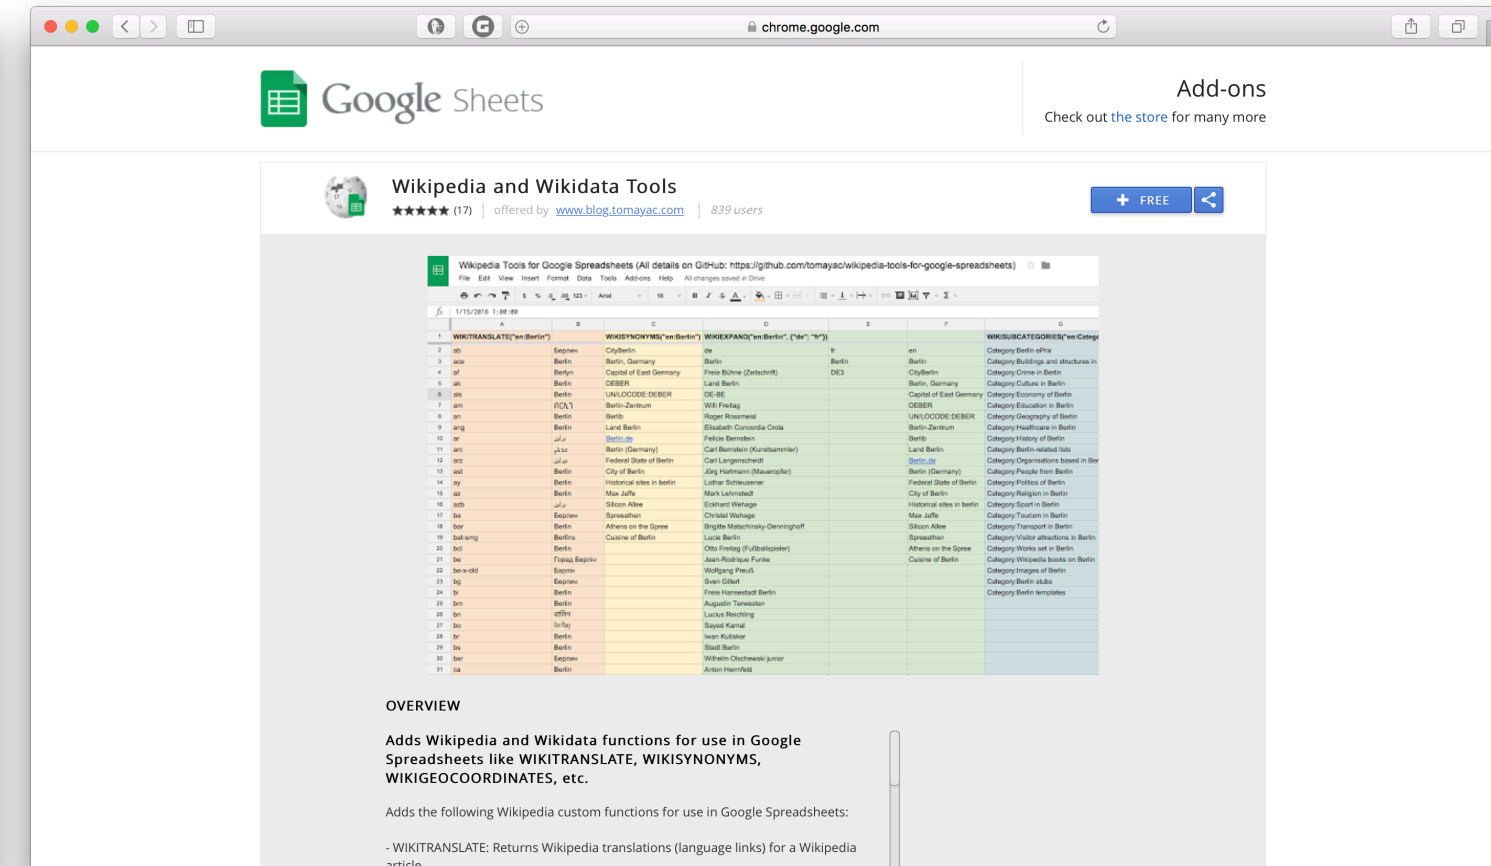

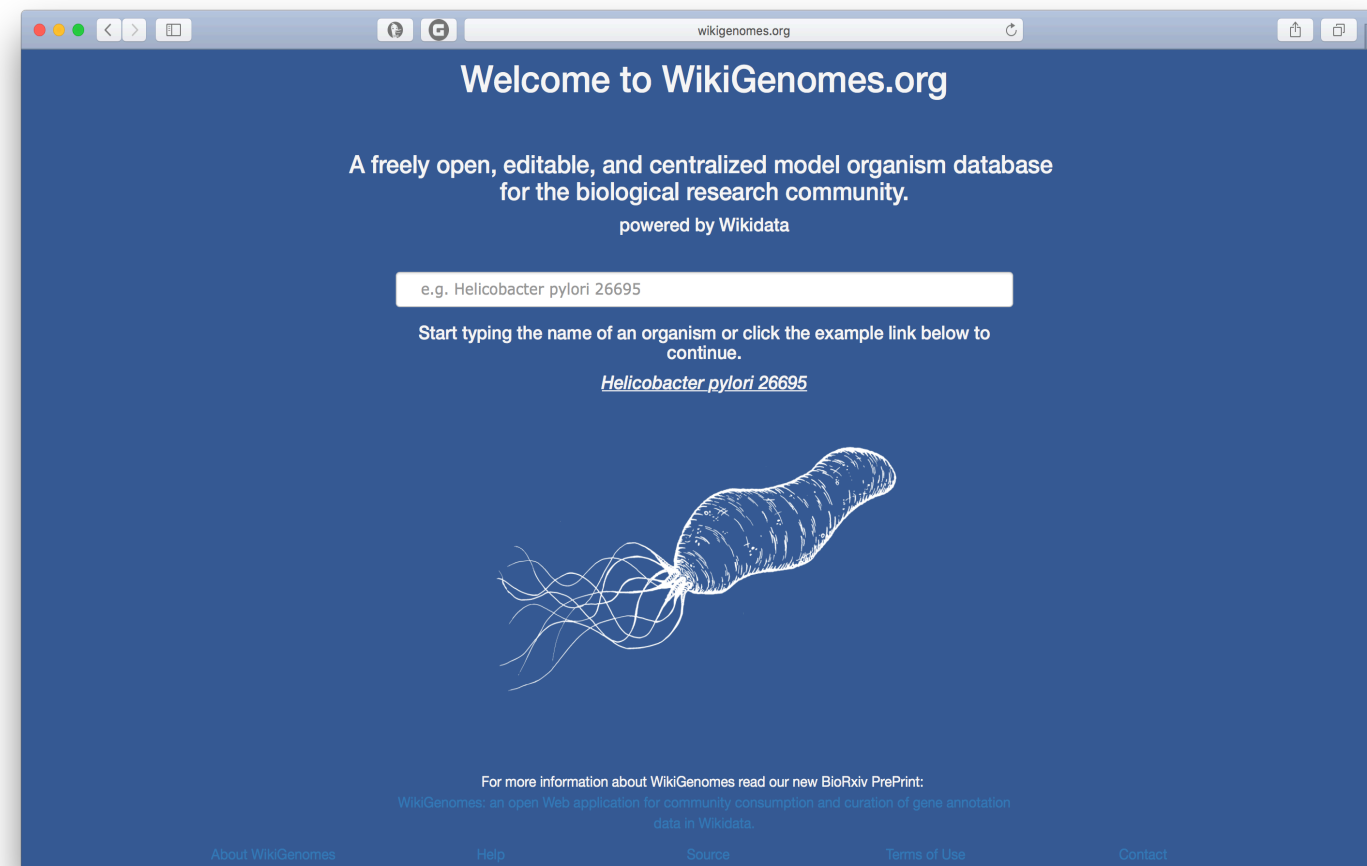

During startup - Warning messages:

```
1: Setting LC_CTYPE failed, using "C"
2: Setting LC_COLLATE failed, using "C"
3: Setting LC_TIME failed, using "C"
4: Setting LC_MESSAGES failed, using "C"
5: Setting LC_MONETARY failed, using "C"
>
```

Step 9: Reuse (build tools/apps)

1. <http://www.wikigenomes.org>

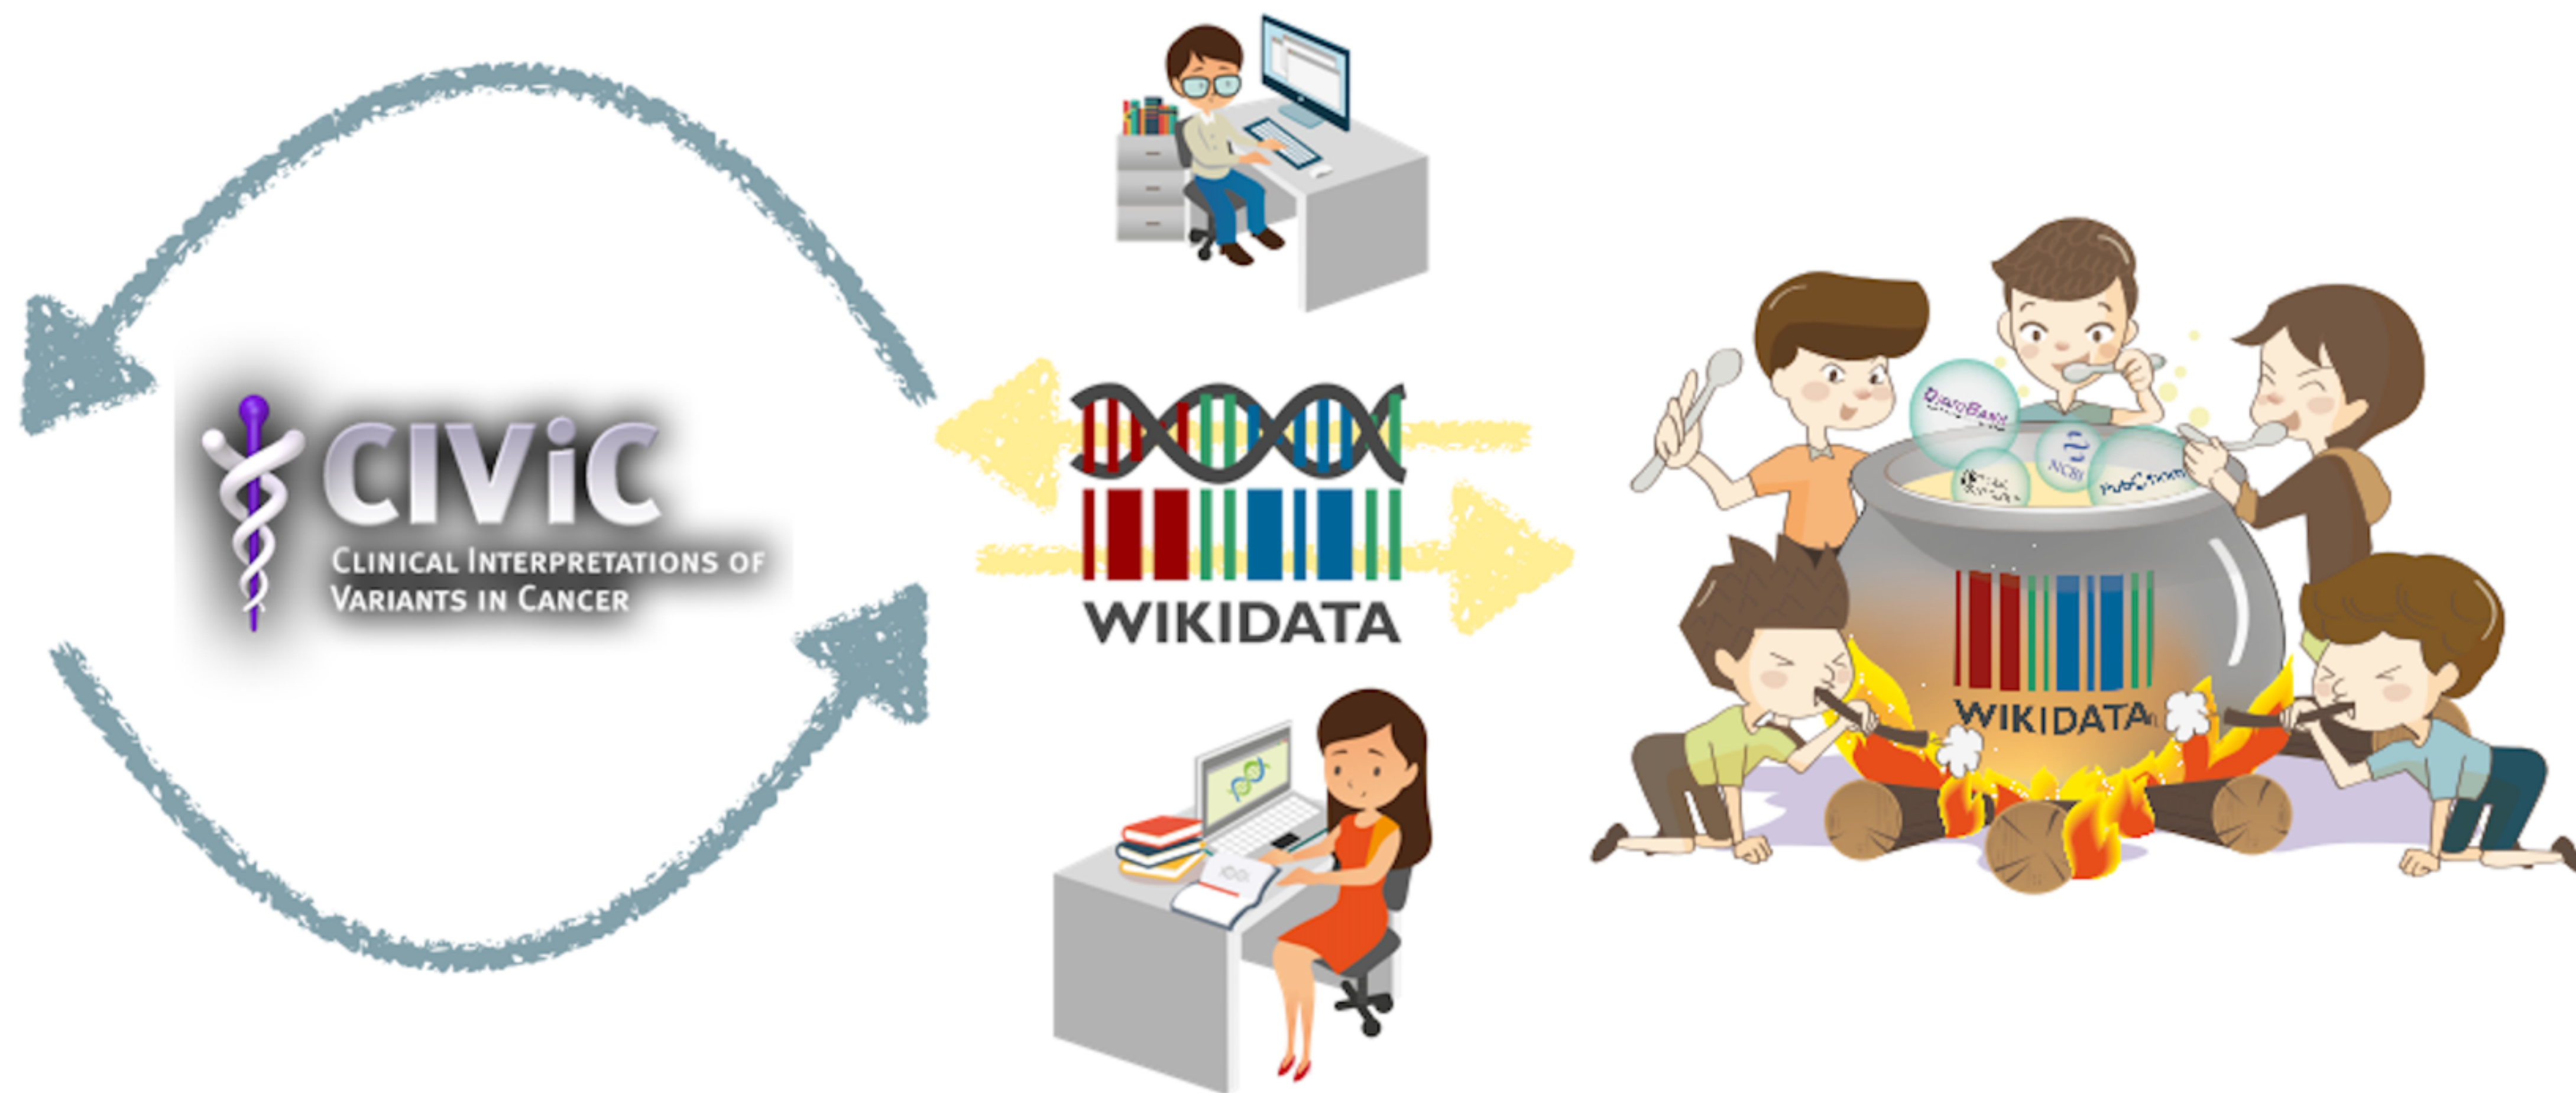

2. <http://tinyurl.com/WikipediaWikidataGoogleAddOn>

3. <http://apps.cytoscape.org/apps/wikidatascape>

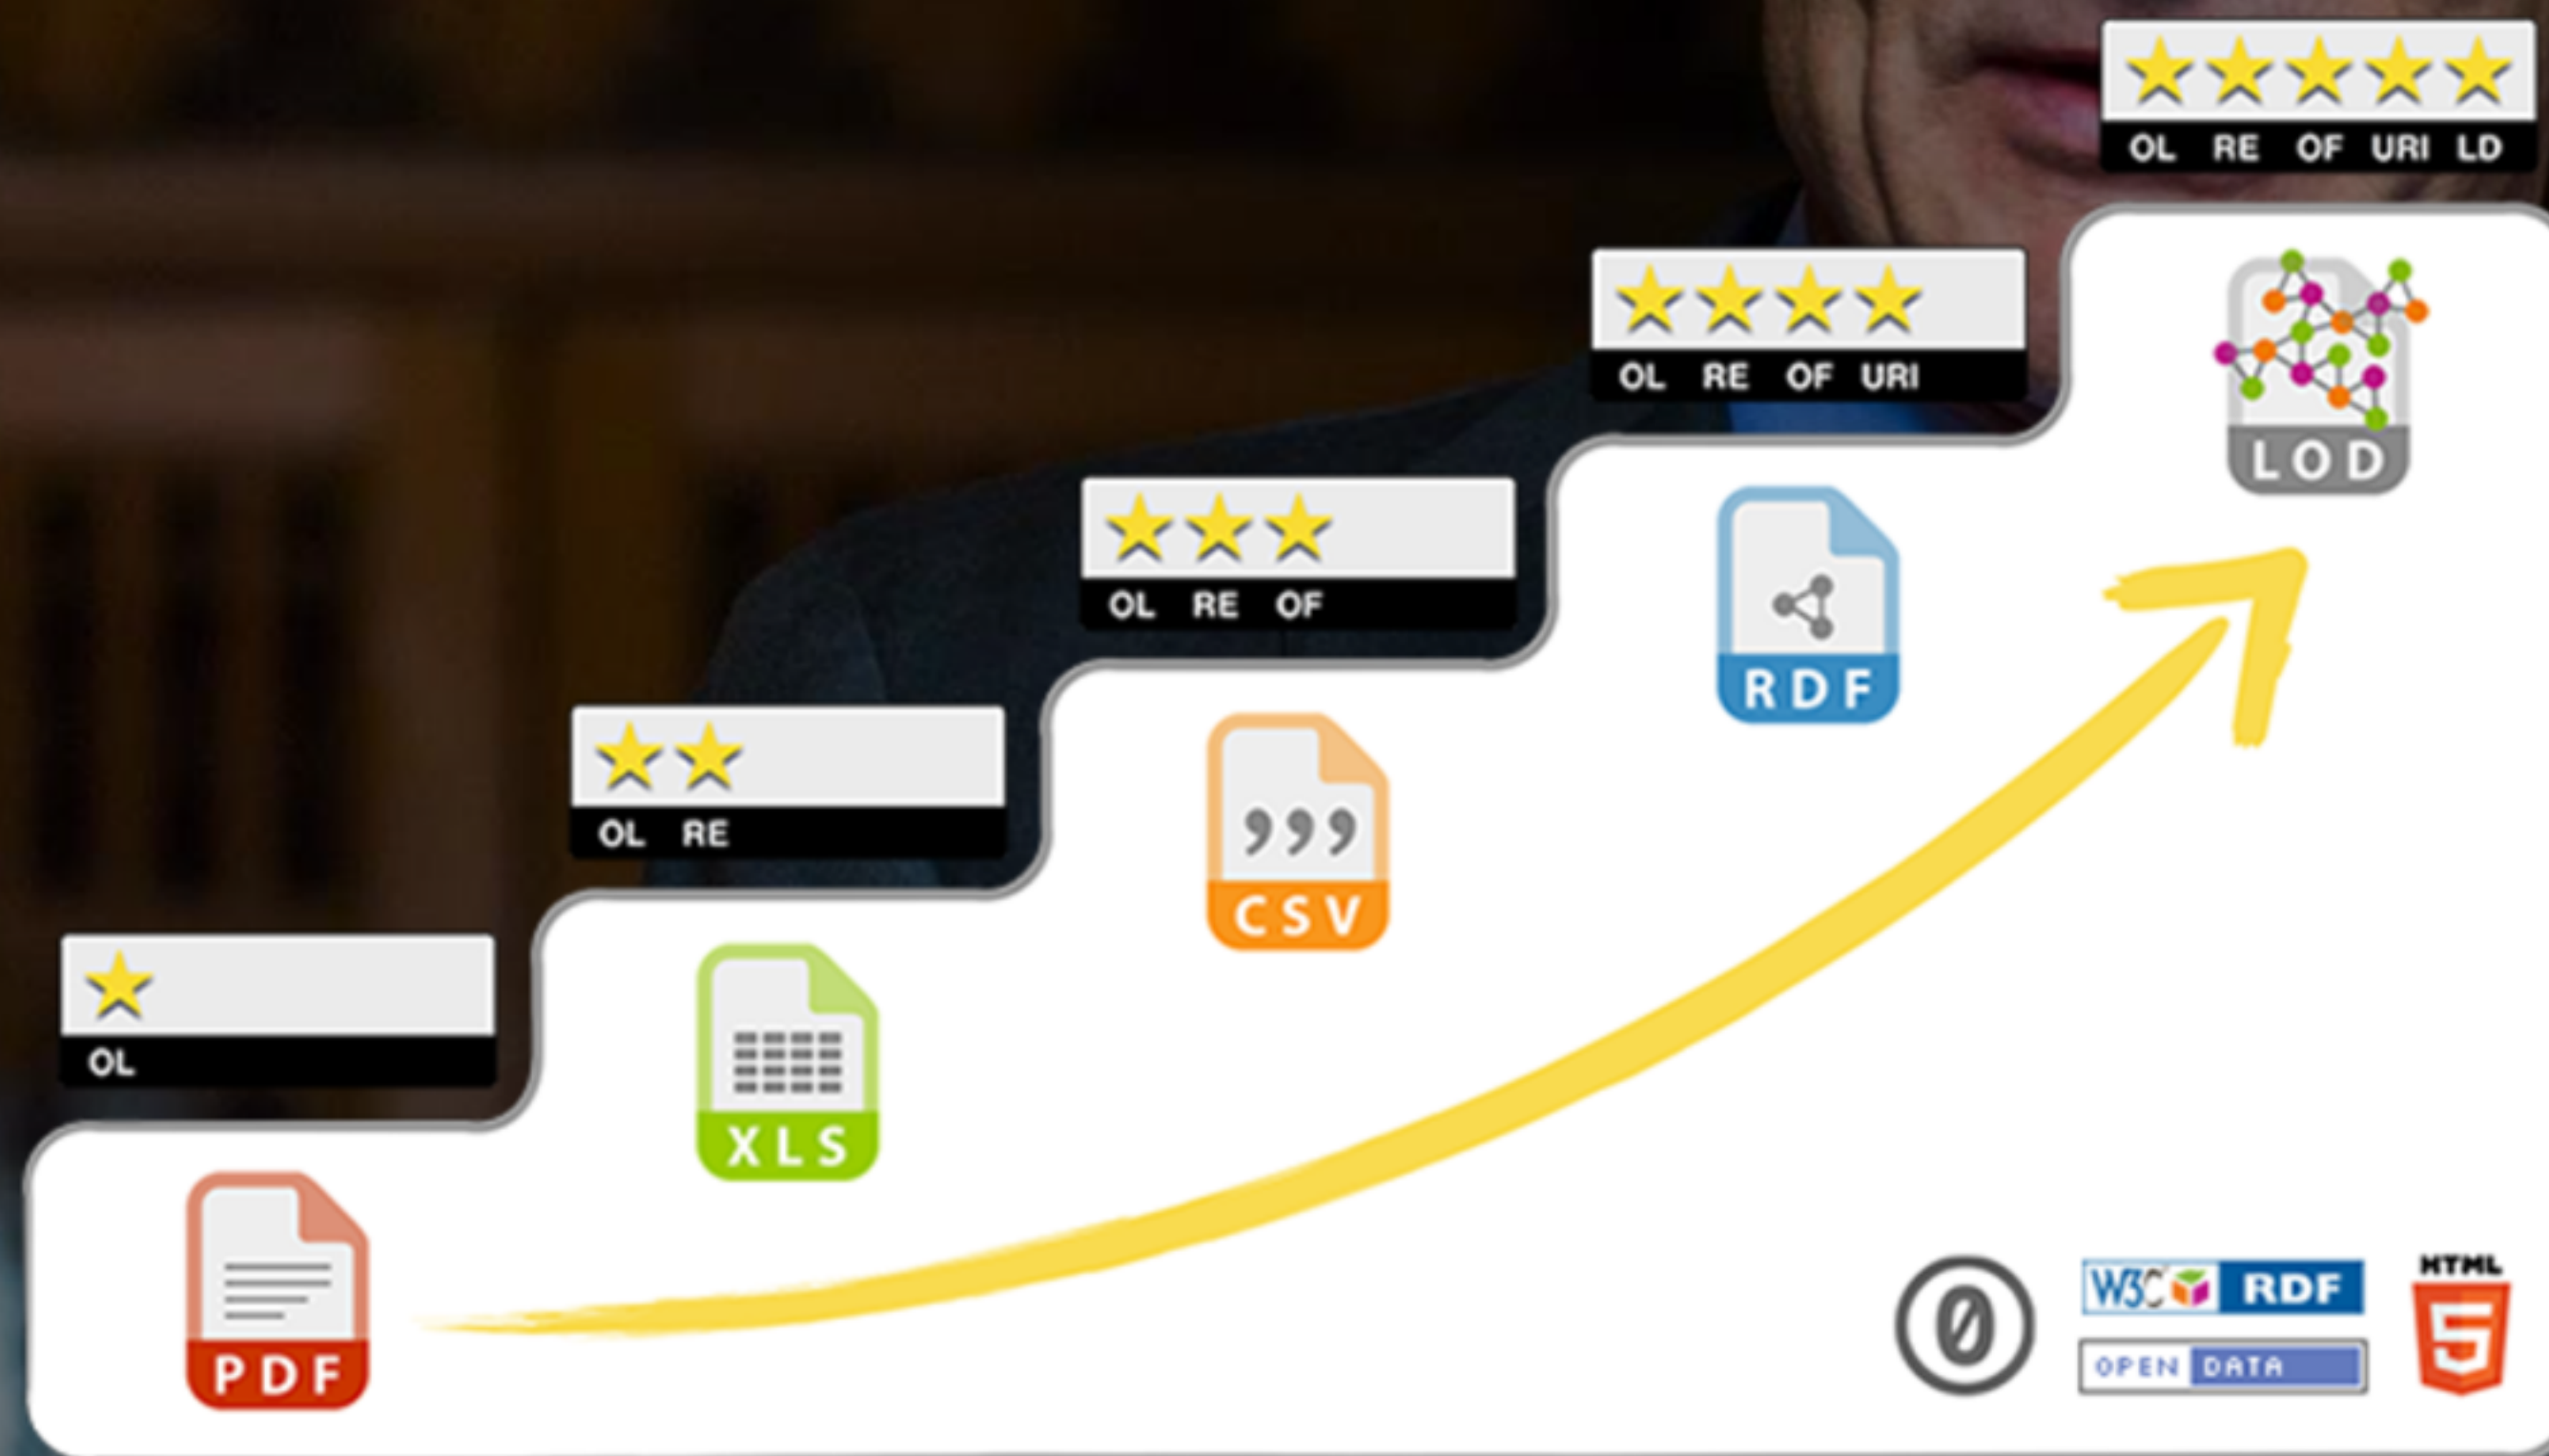

4. <https://cran.r-project.org/web/packages/WikidataQueryServiceR/index.html>

Step 10: Update

5 ★ OPEN DATA

Tim Berners-Lee, the inventor of the Web and Linked Data initiator, suggested a [5-star deployment scheme](#) for Open Data. Here, we give examples for each step of the stars and explain costs and benefits that come along with it.

A screenshot of the Mac OS dock at the bottom of the screen. It contains a variety of application icons, including Safari, Mail, Calendar, Photos, Messages, App Store, and several utility apps. The dock is set against a dark background with a subtle pattern.

Is there local public data on mosquito transmitted diseases, like Zika or malaria that could be added to Wikidata?

D&A Management

D&A Management is an Belgian *consultancy/management/investment* company that is strong in matching people and companies all over the world.

Integrity, dynamism and versatility are our strengths. **Passion and expertise** our **features**. We want to provide added value and working together to build your success story.

D&A Management is looking forward to work together with a Distribution-partner in ***Suriname*** for the products on the next pages..

CIDRERIE RUWET NV

Since **1898** Cidrerie Ruwet is a producer of **craft apple cider**.

Based on our experiences, standards and methods of production, we decided to maintain certain principles: we believe “*there is no substitute for quality*”.

Many years ago, many industrial cider manufacturers tried to “innovate” but in fact they just tried to do things in a cheaper way by compromising on quality. Industrial cider producers use apple juice from concentrate and dry yeast.

At Ruwet we use **only 100% apple juice, freshly pressed in the morning and fermented at noon with our fresh, organic yeast.**

Cidrerie Ruwet NV is 100% Belgian, privately owned and independent. In 2014 a young management team, the brothers Joris (32y) and Frank (35y) Hermans together with a third partner, took over the company via a MBO. After a profound operational and strategic reorganisation, the company now enters into the last stage. this is the commercial reorientation.

THE BELGIAN CRAFT CIDER

To turn its heritage of traditional apple cider into today's demand and the international trend of “craft cider”, Cidrerie Ruwet NV is launching the only ***Belgian Craft Cider***. *Belgian* because the company is 100% Belgian and processes only Belgian fruit, *Craft* because it still produces apple cider in a traditional, authentic way based on its experiences for more the 100 years.

With premium quality in the bottle and a trendy, authentic look on the bottle, **Cidre Ruwet is the alternative for a dynamic consumer who is looking for authenticity, craftsmanship and quality.**

PRODUCTS

Cidre RUWET *Apple* 33Cl 4,5% Alc.
A natural apple cider, medium sweet

Cidre RUWET *Elderberry* 33Cl 4,5% Alc.
A natural apple cider with hints of elderberry
and muscat grape

Huwa-San is a Roam Technology brand

Roam-Technology is a world-leader company in cleaning-water..

Roam Technology designs efficient and sustainable disinfection solutions for a diverse range of applications. Take for example the disinfection of surfaces and water in the horticultural and veterinary field, the cosmetics, food and drink industries, swimming pools, and for domestic use. Hygiene is key in almost every environment.

And that's exactly where we would like to make a difference with our innovative knowledge, superior quality products and customised service.

Roam Technology always goes the extra mile for a cleaner future. Both for your own company as well as for the world around you.

SECURE CONNECTION AND CONTROL

VIRTUAL DATA STORAGE

HOW TO INTEGRATE MANY TYPES OF LOCKERS?

- Based on FAIR Data
- Define minimal functionality
- Define compliant interfaces
- Certify solution providers

-
- ☑ Wikidata contains public data
 - ☑ Wikidata provides a public infrastructure for your FAIR data
 - ☑ Sharing your data on Wikidata makes it FAIR
 - ☑ Communities are key in Wikidata
 - ☑ Wikidata is not a primary data source and need proper citation to the evidence
 - ☑ WikiCite enabled a linked citation graph on Wikidata.
 - ☑ We have successfully added and integrated authoritative data on genes, proteins, genetic variants, diseases, drugs, chemical compounds and citations to Wikidata.
 - ☑ We need more tools / interfaces using Wikidata
 - ☑ We cordially invite you to join us (and CIViC, Cellosaurus and WikiPathways) in making Wikidata the central hub of life science data,.
