

## A Transcriptional fusion plasmids

## B Translational fusion plasmids

**S2 Fig. Schematic representation of the promoter and regulatory regions of the transcriptional and translational fusion plasmids used for the *coxB* promoter assay.** (A) Transcriptional fusion plasmids. (B) Translational fusion plasmids. SBS indicates the RpoS binding site. RBS (*coxB*) and RBS (*lacZ*) indicate and ribosome binding sites for *coxB* and *lacZ*, respectively. Asterisks indicate suppressor mutations. Predicted mRNAs were indicated by dashed arrows.
