

**Figure E2: Localisation of the 11 SNPs within the *DNAI1* gene selected for genotyping**

Representation of the *DNAI1* gene and localization of the informative SNPs used for haplotype analysis ([www.hapmap.org](http://www.hapmap.org)). All the SNPs were localized within intronic regions except rs17856864 and rs11793116 respectively in exon 1 and 11. Vertical boxes represent exon and linkage disequilibrium block of the *DNAI1* gene region was represented at the bottom.
