

Supplementary figure 1: Tréguer et al.

Supplementary Figure 1: Comparison of the two differentiation protocols.

a) The expression of the endothelial markers after differentiation in either the cytokine medium or the VEGF medium is depicted as percentage of Day 0 \pm SEM. b) The cells were differentiated for 7 days in the absence of LIF and the presence of VEGF. The data are normalized against β -actin (Oct4, Brachyury, VE-Cadherin) or PolR2A (PECAM, Tie2), and are depicted as mean % Day 0 \pm SEM. N= 3-4. *P<0.05, **P<0.01, ***P<0.001.
