

## Photographs of the split thickness skin graft wounds from the individual patients

The symbols used are as follows:

O = Oleogel-S10 treatment

M = control moist wound dressing treatment (Mepilex)

The vertical dash indicates the change of dressing at 14 days.

The numbers under the photos and after the date indicate the degree of re-epithelialization, in %. The upper half of the wound is before the dash and the lower half after the dash. The maximum value is 50% equivalent to a fully epithelialized wound half.

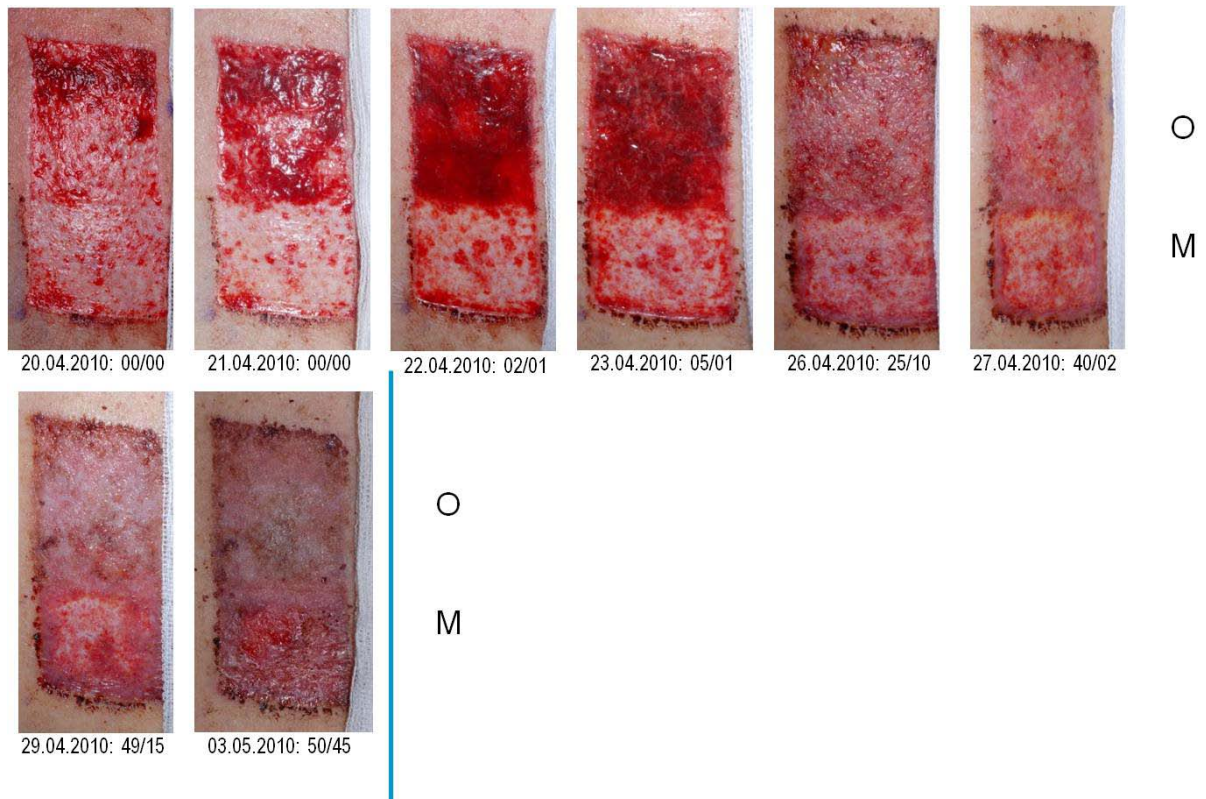

### Patient 001 (born 1938; female)

Wound surface 84 cm<sup>2</sup> (~12 x 7 cm). STSG surgery on 15.04.2010

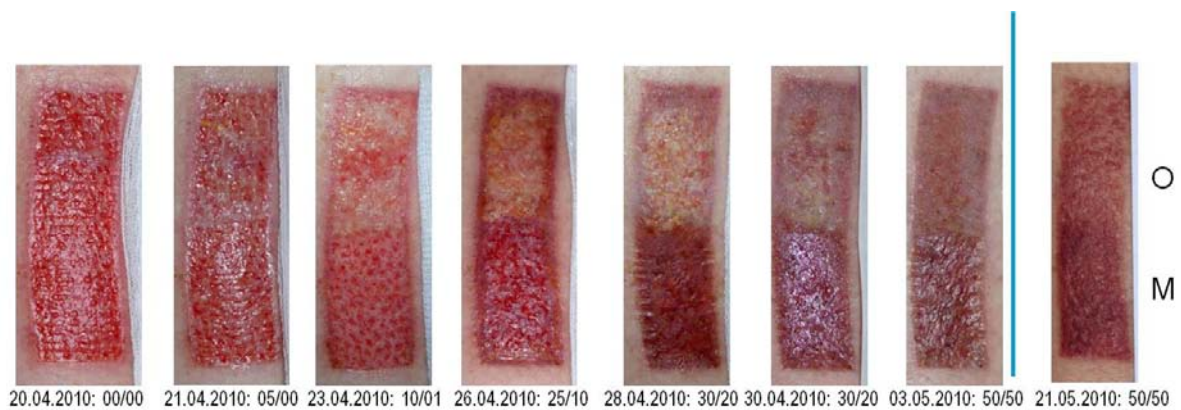

**Patient 002 (born 1937; male)**

Wound surface 28 cm<sup>2</sup> (~7 x 4 cm). STSG surgery on 19.04.2010

**Patient 003 (born 1932; female)**

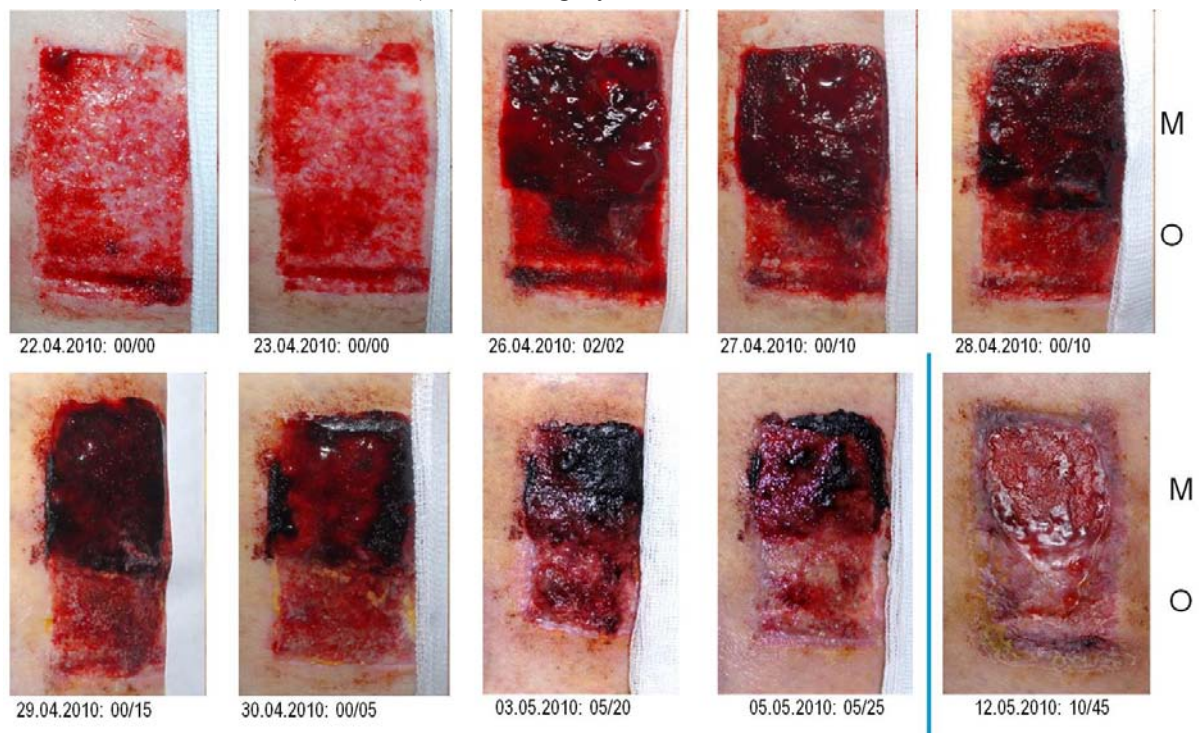

Wound surface 14 cm<sup>2</sup> (~7 x 2 cm). STSG surgery on 19.04.2010

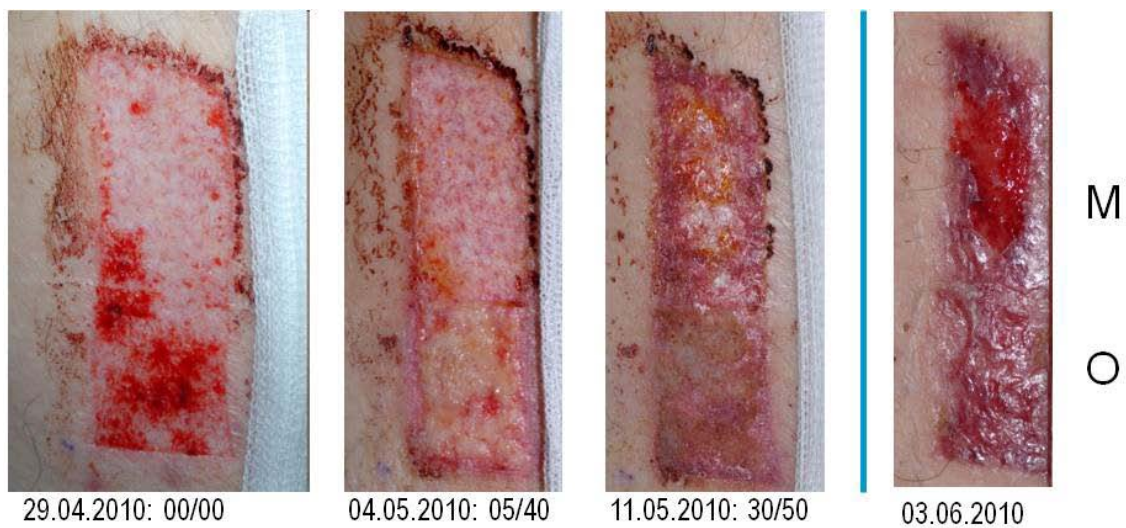

**Patient 004 (born 1932; female)**

Wound surface 12 cm<sup>2</sup> (~6 x 2 cm) STSG surgery on 21.04.2010

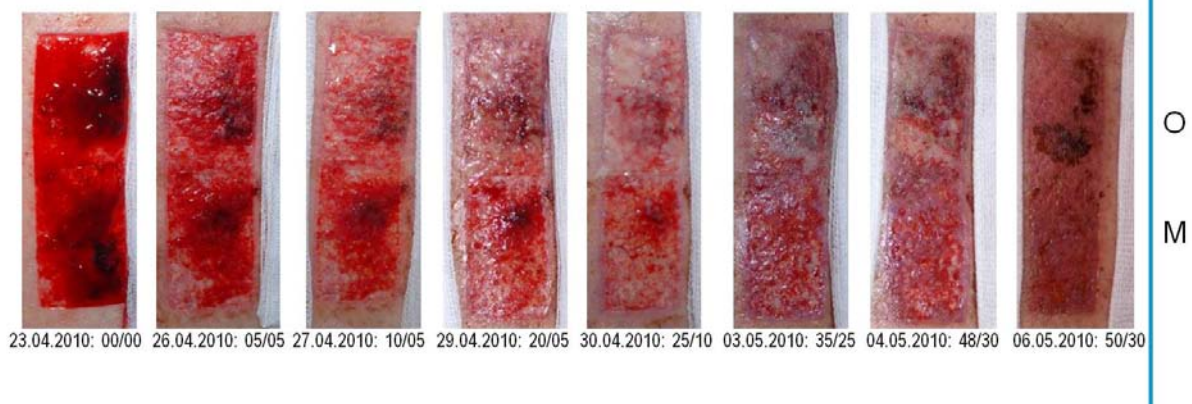

**Patient 005 (born 1935; male)**

Wound surface 12 cm<sup>2</sup> (~6 x 2 cm). STSG surgery on 27.04.2010

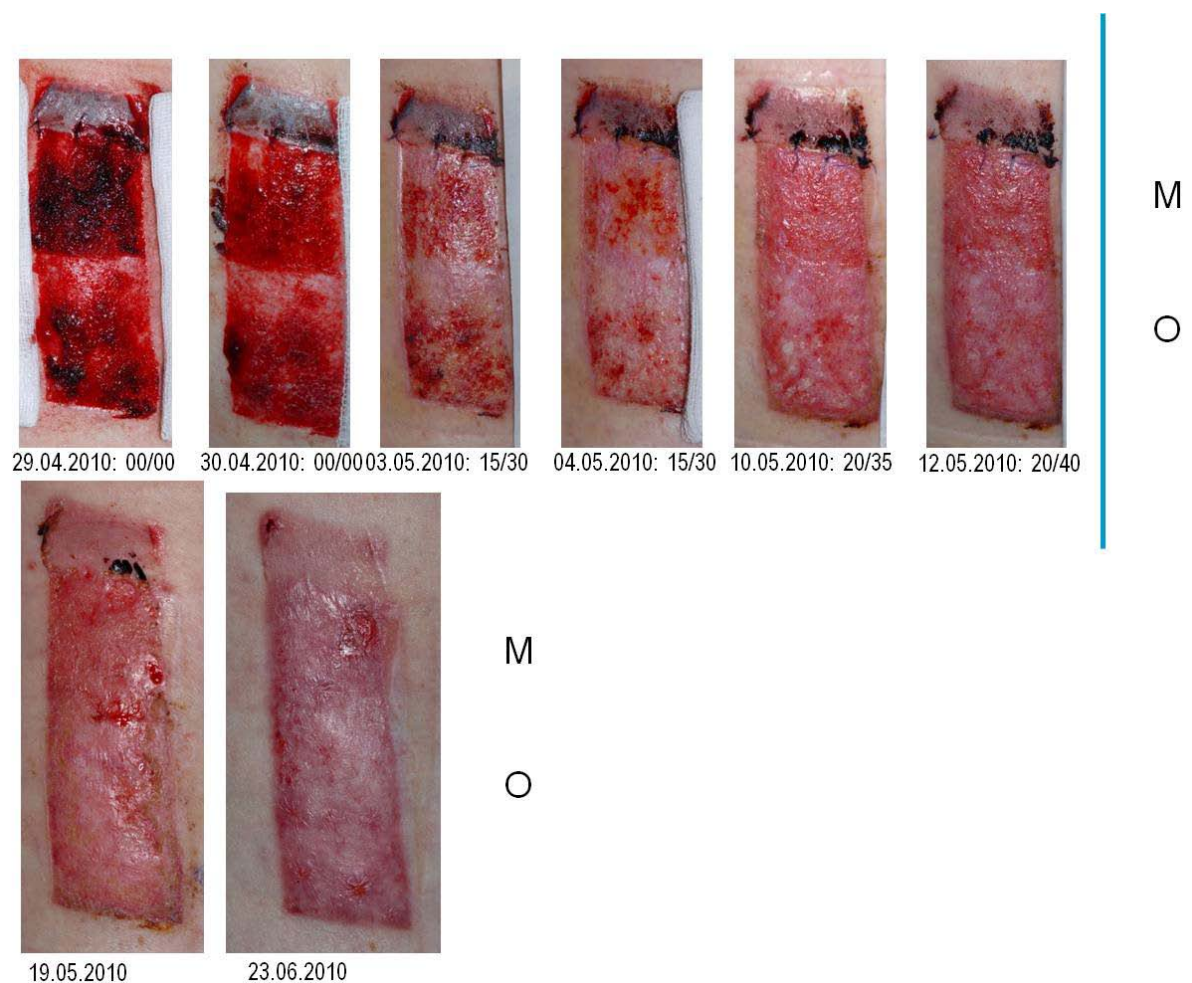

**Patient 006 (born 1955; male)**

Wound surface 21 cm<sup>2</sup> (~7 x 3 cm). STSG surgery on 22.04.2010

**Patient 007 (born 1959; female)**

Wound surface 24 cm<sup>2</sup> (~8 x 3 cm). STSG surgery on 28.04.2010

**Patient 008 (born 1951; male)**

Wound surface 15 cm<sup>2</sup> (~5 x 3 cm). STSG surgery on 10.05.2010
