

Note to the Reader

In this themed issue, unfortunately the dedication has been omitted:

On the occasion of his jubilee, this themed issue is dedicated to
MANFRED SCHARTL

(University of Würzburg, Germany)

who keeps inspiring us with his vast knowledge on polyploidy, genetics, genomics, fish biology,
and evolution as well as with his great commitment for science. (16 April 2013)

In the papers by Arai and Fujimoto, entitled 'Genomic constitution and atypical reproduction in polyploid and unisexual lineages of the *Misgurnus* loach, a teleost fish' [Cytogenet Genome Res 2013;140:226–240, DOI: 10.1159/000353301] and by Ashman et al., entitled 'Revisiting the dioecy-polyploidy association: alternate pathways and research opportunities' [Cytogenet Genome Res 2013;140:241–255, DOI: 10.1159/000353306], an error has occurred during the printing process.

The figures on pages 231, 235 and 242, respectively, should be four-color images. As they are now, some of the information is not visible.

Both articles are freely accessible online to provide the correct information and can be found at <http://www.karger.com/Journal/Issue/261038>.
