

SUPPLEMENTARY FIGURE 2

Supplementary Figure 2. Effects of euflammation on tumor growth rate and hippocampal *Il-1β* gene expression responses to a LPS or PBS challenge in tumor-bearing and tumor-free mice from Experiment 2. A)

Mean ± SEM estimated tumor volume after euflammation and before the LPS/PBS challenge. **B)** Mean ± SEM quantitative *Il-1β* gene expression responses to LPS or PBS (5.5 h prior) in the hippocampus of mice that received euflammation or no euflammation prior to tumor (or control) induction.
