Supplementary Figure 1.

(A) The initial chest radiograph shows left-sided pleural effusion (white arrow). (B) Semi-rigid pleuroscopy shows bloody pleural effusion and ubiquitous tumor growth in the left parietal pleura, which was finally confirmed to be metastatic lung adenocarcinoma. (C) Mistletoe extract was sprayed evenly into the left pleural space using a spray catheter. (D) A chest radiograph taken 1 month after pleurodesis shows a partial response to the chemical pleurodesis (black arrow).
