

**S1 Fig. Variable importance in Projection Plot (VIP): Targeted metabolites (NMR and DI-MS) useful for Discriminating Stillbirths (overall) from Controls.**

**The higher the VIP value (X-axis) the more discriminating the metabolite.**

**Permutation Test (2000 repeats) for the developed PLS-DA model: P-value = 0.0285**

**DI/ DIMS- Direct injection Mass spectrometry method**

**NMR- Nuclear Magnetic resonance**
