

Figure S1: Response of nAChR subunit mutants to aldicarb in adult worms

Several nAChR subunits are required for wild-type sensitivity of L1 worms to 8mM aldicarb, including UNC-29, UNC-63, LEV1, LEV-8 and UNC-38. ACR-16 and ACR-8 are not required for

Ald-sensitivity in adults. All data are means of 3 independent replicates. Error bars are standard error of the mean.
