

Open citations are an important part of open scholarly infrastructure. Their development also shows both the power and limitations of established parties, restricting their potential use for the wider scholarly community.

QUALITY OF CITATION DATA

More and more publishers are making references openly available through Crossref, but their quality is often still suboptimal, with many references lacking important information including DOIs (Fig 1a). This limits their use in open citation indexes, like OpenCitations' COCI index.

Fig 1a. Citation counts in Crossref cited from: all works, all publication years

data: D. Ecer (April 2018)
<https://elifesci.org/crossref-data-notebook>

Fig 1b. Random selection of 1000 open citations cited from: journal articles published 2015-2017

data: B. Kramer (Sept 2018)
<https://github.com/bmkramer/crossref-open-citations>

COMMUNITY ENRICHMENT – an experiment

To explore the power of community enrichment of citations, we took a random sample of open citations from Crossref (Fig 1b), identified citations to journal articles missing DOIs and present a subset here for enrichment by conference participants: that's **YOU**!

POSSIBILITIES AND PITFALLS

Community enrichment of citation data would enable the scholarly community as a whole to not only to make optimal use of open citations, but also contribute to their value, without enclosing the enriched data.

Questions around enrichment of open citation data include: whether responsibility for providing good citation data should be extended beyond publishers, what legitimate sources to get additional citation data information from (eg Wikidata), how alternative routes to enrichment would scale, and how provenance of enrichments should be dealt with. **LET'S DISCUSS!**
