

Supplementary Figure 2. Bladder wall temperatures with a volume of 50ml vs. 100ml

Comparison of intravesical volume (with C-HT and H₂O). Average temperatures in the bladder wall. Dashed horizontal line represents the target temperature of 40.5°C.

C-HT, conductive hyperthermia; RF-HT, radiofrequency induced hyperthermia; T, temperature; Bl. Neck, bladder neck; subm, submucosa; detr, detrusor; ser, serosa.
