

Table S7

*Partial Spearman's rank-order correlations, controlling for effects of familiarity, between ratings of complexity, pleasantness and arousal in response to piano solo music (N = 92).*

Group		Complexity	Pleasantness
f (df = 80)	Pleasantness	-.002	
m (df = 81)		.42*	
All (df = 83)		.22	
f (df = 80)	Arousal	.82*	-.20
m (df = 81)		.82*	.28*
All (df = 83)		.83*	.03

*Note.* \* $p < .05$  after Bonferroni-Holm correction; f = females; m = males; All = all participants; the *dfs* are not the same for all correlations due to slightly different numbers of outliers.
