Table S1

Partial Spearman's rank-order correlations between ratings of complexity, pleasantness and arousal, controlling for effects of familiarity, in response to IAPS pictures (N = 96).

Group		Complexity
f (*df* = 89)	Pleasantness	.02
m (*df* = 91)		.01
All (*df* = 89)		.01
f (*df* = 89)	Arousal	.24*
m (*df* = 89)		.25*
All (*df* = 91)		.27*

Note. *p < .05 after Bonferroni-Holm correction; f = females; m = males; All = all participants; the *dfs* are not the same for all correlations due to slightly different numbers of outliers.
