Table S10

Partial Spearman's rank-order correlations, controlling for effects of familiarity, between ratings of complexity, pleasantness and arousal in response to piano solo and piano trio excerpts (N = 80).

Group		Complexity	Pleasantness
f *(df = 69)*	Pleasantness	-.14	
m *(df = 70)*		.41*	
All *(df = 73)*		.25*	
f *(df = 69)*	Arousal	.83*	-.23*
M *(df = 70)*		.77*	.35*
All *(df = 73)*		.84*	.09

Note. *p < .05 after Bonferroni-Holm correction; f = females; m = males; All = all participants; the *dfs* are not the same for all correlations due to slightly different numbers of outliers.
