

Colon
adenocarcinoma
(COAD)

Figure: Gene expression data was obtained from TCGA, pancancer normalized (EDAseq) and log transformed. Samples are ordered by ICR score. Optimal k for clustering was 3. The combination action performed to reduce to 3 clusters is: none. Resulting in mean ICR scores of 6.05 / 7.4 / 8.84 for Low / Medium / High resp.

cell populations

Figure: EDAseq normalized, log transformed gene expression data was obtained from TCGA, using Assembler_Pance_Normalized_filtered. Bindea_ORIG enrichment z-scores were used to generate this heatmap.
